Here's the Right Way to Pass CompTIA 220-1201 Exam

DOWNLOAD the newest Test4Sure 220-1201 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1bNFEWjaJBPEBwu2_fyIQPVr7K9LAZ1gp

If you are clueless about the oncoming exam, our 220-1201 guide materials are trustworthy materials for your information. More than tens of thousands of exam candidate coincide to choose our 220-1201practice materials and passed their exam with satisfied scores, a lot of them even got full marks. According to the data that are proved and tested by our loyal customers, the pass rate of our 220-1201 Exam Questions is high as 98% to 100%.

Are you in the condition that you want to make progress but you don't know how to and you are a little lost in the praparation. Perhaps you need help with our 220-1201 preparation materials. A good product, the most important thing is to seize the user's most concerned part. We can tell you that 99% of those who use our 220-1201 Exam Questions have already got the certificates they want and they all lead a better life now. Just buy our 220-1201 trainning braindumps, then you will succeed as well!

Practice Test 220-1201 Fee, Exam 220-1201 Online

each 220-1201 practice torrent in our online store before the listing, are subject to stringent quality checks within the company. Just focus on spending the most practice to use our 220-1201 test materials. After careful preparation, I believe you will be able to pass the exam. This is a wise choice, after using our 220-1201 Exam Question, you will realize your dream of a promotion. Therefore, when you are ready to review the exam, you can fully trust our 220-1201 practice torrent, choose our learning materials. If you don't want to miss out on such a good opportunity, buy it quickly!

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q215-Q220):

NEW QUESTION # 215

A technician is building a high-powered workstation. When the technician attempts to start the workstation, nothing happens. The technician verifies that all power connectors are fully seated. Which of the following is the most likely cause of the issue?

- A. The CPU fan connector is faulty
- B. The RAM is not fully seated.
- C. The case header pins are not connected.
- D. The power supply unit's wattage is too low.

Answer: C

Explanation:

When a newly built workstation shows no response at all-no fans spinning, no indicator LEDs, and no POST activity-this indicates that the system is not receiving the signal to power on. Since the technician has already verified that all primary power connectors are fully seated (including the 24-pin ATX motherboard connector and the 4-pin or 8-pin CPU power connector), the most likely cause is that the case header pins are not connected to the motherboard.

According to CompTIA Core 1 (220-1201) hardware installation and troubleshooting concepts, the power button on the computer case connects to the motherboard via the front-panel (system panel) header, specifically the PWR_SW pins. If this connector is missing, improperly placed, or connected to the wrong pins, pressing the power button will do nothing because the motherboard never receives the power-on signal.

Incorrectly seated RAM typically allows the system to power on but prevents successful POST, often resulting in beep codes or error lights. An underpowered PSU usually causes instability, random shutdowns, or failure under load rather than complete inactivity. A faulty CPU fan connector generally triggers a BIOS warning or shutdown after power-on, not total failure to start.

This scenario directly matches CompTIA's emphasis on checking front-panel connections as a primary step when a system does not power on at all.

NEW QUESTION # 216

Which of the following can carry data and electricity to network devices? (Select two).

- A. Cable modem
- B. Unmanaged switch
- C. Access point
- D. Router
- E. PoE
- F. Injector

Answer: E,F

Explanation:

PoE (Power over Ethernet) allows both data and electrical power to be delivered over the same Ethernet cable. A PoE injector adds power to Ethernet cables for devices that need it.

From CompTIA A+ 220-1101 Official Study Guide, Objective 2.2 - Networking hardware:

"Power over Ethernet (PoE) technology and PoE injectors enable both power and data transmission to compatible network devices like access points and IP cameras." Verified Source:

* CompTIA A+ Core 1 (220-1101) Official Study Guide, Chapter 2: Network Hardware
* CompTIA Exam Objectives 220-1101, Domain 2.2

NEW QUESTION # 217

A user brings a laptop to work every morning, correctly seats it in the docking station and then opens the laptop to begin work with no issues After the user left the laptop at home during a two-week vacation the laptop is no longer working. Upon returning to the office, the user reports that the keyboard and display are no longer working Which of the following should the technician ask the user to do first?

- A. Connect the laptop directly to the network.
- B. Plug the laptop in and let it charge overnight
- C. Ensure the docking station is plugged in.
- D. Press and release the laptop power button.

Answer: D

Explanation:
Reasoning: Many docking stations provide power and functionality only when the laptop is properly powered on. If the laptop was powered off (e.g., during the vacation), docking it will not automatically turn it on. The technician should first ensure the laptop is powered on by pressing the power button.
This is a common troubleshooting step when laptops in docking stations appear non-functional.
Relevance to CompTIA A+ Core 1: This falls under Objective 5.2, which covers diagnosing and resolving common laptop and mobile device issues.
Why the Other Options Are Incorrect:
A . Ensure the docking station is plugged in:
While ensuring power to the docking station is important, the scenario specifies that the issue occurred after a vacation. The likelihood of the docking station losing power coincidentally during the vacation is low. Verifying the laptop's power state should be the first step.
C . Plug the laptop in and let it charge overnight:
There is no indication the laptop's battery is drained. While charging could resolve a dead battery, the user is more likely experiencing an issue where the laptop is powered off but docked, so charging overnight is not the best first step.
D . Connect the laptop directly to the network:
A network connection will not resolve the primary issue of the keyboard and display not working. Addressing the laptop's power state is a higher priority.
Practical Example:
If a user returns from a vacation and places a powered-off laptop into a docking station, it may not automatically power on. Pressing the power button ensures the laptop is operational and communicating with the docking station.
CompTIA A+ Exam Objective Alignment:
Objective 5.2: Troubleshooting common laptop issues, including power, display, and peripheral connectivity.

NEW QUESTION # 218
A user replaces their PC power supply and connects it to the components, but the PC fails to start. What is the most likely cause?

- A. The 4-pin CPU power connector is not connected
- B. The computer requires additional RAM
- C. The PSU only works in redundant setups
- D. The wattage is insufficient

Answer: A

Explanation:
Modern motherboards require both the 24-pin ATX connector and a 4-pin or 8-pin CPU power connector. If the CPU power connector is not attached, the motherboard will receive power but the system will not boot. CompTIA A+ specifically lists this as a common mistake after replacing a power supply.
Insufficient wattage may cause instability, but usually the system still attempts to start. RAM does not prevent power-on if missing; instead, the system produces beep codes. Redundant PSUs are used in servers, not standard desktops.

NEW QUESTION # 219
SIMULATION 8
A third-party contractor recently installed a new switch, router, and cabling for a small corporate office. After the installation, users started experiencing issues connecting to resources over the network.
INSTRUCTIONS
Click on each PC and server to review outputs. From the remediation section on the right, select an issue and solution for each device.

Answer:

Explanation:
Looking at the network configurations and outputs from both PCs and servers, here are the possible issues and solutions:
1. PC 1
Issue: The IP address for PC1 is 192.168.1.1, which conflicts with Server 1 (which also uses

192.168.1.1).
Solution: Change the IP address on PC1 to a unique one within the range, like 192.168.1.3.
2. PC 2
Issue: PC 2 is configured with 192.168.1.2, which conflicts with Server 2 that has the same IP address. Solution: Update the IP address on PC 2 to something unique, like 192.168.1.4.
3. Server 1
Issue: The IP address for Server 1 is 192.168.1.1, which conflicts with PC1. Solution: Since Server 1 and PC1 are using the same IP address, change one of them. For Server 1, you could change the IP address to 192.168.1.5.
4. Server 2
Issue: Server 2 is using the IP address 192.168.1.2, which conflicts with PC2. Solution: Update Server 2 to use a different IP address, such as 192.168.1.6.
General Remediation:
The primary problem here is overlapping IP addresses, leading to connectivity issues. Each device on the network must have a unique IP address. After making these changes, ensure that all devices can communicate properly by testing the connection between devices and verifying they can access shared resources.

NEW QUESTION # 220

......

Our CompTIA A+ Certification Exam: Core 1 (220-1201) PDF format is user-friendly and accessible on any smart device, allowing applicants to study from anywhere at any time. We have included actual and updated CompTIA 220-1201 questions in this CompTIA A+ Certification Exam: Core 1 (220-1201) Dumps PDF file. Our CompTIA A+ Certification Exam: Core 1 (220-1201) exam dumps PDF format is designed to help individuals acquire the knowledge necessary to succeed in the test.
