### Palo Alto Networks Cloud Security Professional Sample Questions (Q58-Q63):

#### NEW QUESTION # 58

A customer wants to turn on Auto Remediation.

Which policy type has the built-in CLI command for remediation?

- A. Anomaly
- B. Audit Event
- C. Config
- D. Network

**Answer: C**

Explanation:

Reference: <https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin/prisma-cloud-policies/create-a-policy.html>

In Prisma Cloud, Config policies have built-in CLI commands for auto-remediation. These policies help in identifying misconfigurations within cloud environments and can automatically execute remediation commands to correct the configurations without manual intervention. This feature is part of Prisma Cloud's comprehensive approach to maintaining cloud security posture by ensuring that cloud resources are configured in accordance with best practices and compliance standards.

#### NEW QUESTION # 59

An administrator has access to a Prisma Cloud Enterprise.

What are the steps to deploy a single container Defender on an ec2 node?

- A. Execute the curl | bash script on the ec2 node.
- B. Pull the Defender image to the ec2 node, copy and execute the curl | bash script, and start the Defender to ensure it is running.
- C. Generate DaemonSet file and apply DaemonSet to the twistlock namespace.
- D. Configure the cloud credential in the console and allow cloud discovery to auto-protect the ec2 node.

**Answer: A**

Explanation:

#### NEW QUESTION # 60

A customer has a large environment that needs to upgrade Console without upgrading all Defenders at one time.

What are two prerequisites prior to performing a rolling upgrade of Defenders? (Choose two.)

- A. manual installation of the latest twistcli tool prior to the rolling upgrade
- B. a second location where you can install the Console
- C. additional workload licenses are required to perform the rolling upgrade
- D. an existing Console at version n-1
- E. all Defenders set in read-only mode before execution of the rolling upgrade

**Answer: A,D**

Explanation:

<https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute/upgrade>

/upgrade\_process\_saas After the Console has been upgraded, check and upgrade any of the Defenders that have reached the end of their support lifecycle (Defenders are backward compatible for N-2 releases). The Defender release image is built from the UBI8-minimal base image and on upgrade it is a full container image upgrade, which means that the old Defender container is replaced with a new container. Then, upgrade all other Prisma Cloud components, such as the Jenkins plugin.

#### NEW QUESTION # 61

A Prisma Cloud Administrator onboarded an AWS cloud account with agentless scanning enabled successfully to Prisma Cloud. Which item requires deploying defenders to be able to inspect the risk on the onboarded AWS account?

- A. Container runtime risks
- B. Host compliances risks
- C. Host vulnerability risks
- D. Container vulnerability risks

**Answer: A**

Explanation:

While agentless scanning in Prisma Cloud can effectively assess various risks in cloud environments, including host compliance and vulnerabilities, it does not extend to container runtime risks. To inspect risks associated with container runtimes, such as real-time threat detection, behavioral monitoring, and deep visibility into container activity, deploying Prisma Cloud Defenders is necessary. These Defenders are lightweight agents that provide an additional layer of security by monitoring containerized applications in real-time, thereby offering comprehensive protection against threats that may arise during the runtime phase of containers.

#### NEW QUESTION # 62

Which RQL query type is invalid?

- A. Config
- B. Event
- C. IAM
- D. Incident

**Answer: D**

Explanation:

Within Prisma Cloud's Resource Query Language (RQL), the "Incident" query type is invalid because RQL is designed to query configuration and posture information of cloud resources, not incident data. The valid RQL query types include "Config" for querying resource configurations, "Network" for querying network-related information, "IAM" for querying identity and access management configurations, and "Event" for querying audit events. The focus on resource configurations and audit events aligns with Prisma Cloud's capabilities in cloud security posture management (CSPM) and cloud workload protection platform (CWPP), providing insights into resource configurations, compliance, and network traffic.
