You final purpose is to get the P_SAPEA_2023 certificate. So it is important to choose good study materials. In fact, our aim is the same with you. Our P_SAPEA_2023 study materials have strong strengths to help you pass the exam. Maybe you still have doubts about our P_SAPEA_2023 exam materials. We have statistics to prove the truth. First of all, our sales volumes are the highest in the market. You can browse our official websites to check our sales volumes. At the same time, many people pass the exam for the first time under the guidance of our P_SAPEA_2023 Practice Exam.

SAP P_SAPEA_2023 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Architecture vision and roadmap: It focuses on developing the architecture vision and roadmap for a company. The topic also covers existing and future business models and capabilities and target business• solution architecture roadmap.

Topic 2	<ul style="list-style-type: none"> • SAP Enterprise Architecture Framework and toolset: The focal point of this topic is the company's business strategy. It also covers SAP Reference Architecture content, IT requirements, business requirements and (SAP) solution space, and SAP Enterprise Architecture-related artifacts.
Topic 3	<ul style="list-style-type: none"> • Application, Data, and Technical Architecture: This topic evaluates your knowledge about artifact content, stakeholders, best practices of SAP Reference Content, the SAP Integration Advisory Methodology, and SAP Clean Core principles and strategy.
Topic 4	<ul style="list-style-type: none"> • Business Architecture: The topic of business architecture discusses business capability mapping and end-to-end processes.

Unparalleled SAP P_SAPEA_2023 Reliable Exam Materials Pass Guaranteed

What P_SAPEA_2023 study quiz can give you is far more than just a piece of information. First of all, P_SAPEA_2023 preparation questions can save you time and money. As a saying goes, to sensible men, every day is a day of reckoning. Every minute P_SAPEA_2023 study quiz saves for you may make you a huge profit. Secondly, P_SAPEA_2023 learning guide will also help you to master a lot of very useful professional knowledge in the process of helping you pass the exam.

SAP Certified Professional - SAP Enterprise Architect Sample Questions (Q33-Q38):

NEW QUESTION # 33

As Chief Enterprise Architect, you want to select an extension option that follows SAP's clean-core strategy. What are your recommendations to implement the clean-core strategy best?

- A. Follow SAP's Tier 1 to Tier 2 extension model, which enables different extension options: Cloud Extensibility Model and Cloud API Enablement. This allows the development of cloud- ready and upgrade-stable applications and extensions.
- B. To follow the clean-core strategy, the so-called "Developer Extensibility" of S/4HANA isn't allowed. Extensions must use "Side-by-Side Extensibility" on the SAP Business Technology Platform. These extensions use corresponding public remote APIs of the S/4HANA backend system.
- C. Use of public local APIs or public remote APIs for "Developer Extensibility."
- D. Use "Key User Extensibility" functions of S/4HANA for simple extensions. "Developer Extensibility must comply with the rules for a Tier-1 or Tier-2 extension.

Answer: B

NEW QUESTION # 34

Demand and Supply Planning (SAP IBP) implementation has been identified as a quick win, based on feedback from a large cross section of Wanderlust stakeholders. As the Chief Enterprise Architect, you have now been asked to scope and contextualize the architecture project. Architecture principles have already been adopted. Which of the following activities should you to initiate to conclude the Statement of Architecture Work for the intended SAP IBP implementation initiative? Note: There are 3 correct answers to this question.

- A. Define the Solution Context for the architecture work.
- B. Conduct a high-level Capability Assessment to identify areas of improvement (business and IT).
- C. Conduct a technical Proof of Concept to understand features and functionalities of SAP IBP.
- D. Outline the aspirational Solution Concept to address the stakeholders' needs and business requirements.
- E. Conduct a Fit Gap Assessment to identify requirements that cannot be met

Answer: A,D,E

Explanation:

The Statement of Architecture Work should encompass a Fit Gap Assessment to understand what requirements are currently not

met by existing capabilities, the definition of the Solution Context to set the boundaries and scope of the architecture project, and the outline of the aspirational Solution Concept that encapsulates the stakeholders' needs and business requirements. These steps are vital in the preparatory phase to ensure that the architecture work is well-defined and targeted to deliver the anticipated outcomes. Reference = These activities are part of standard enterprise architecture practices and are necessary to develop a comprehensive and actionable Statement of Architecture Work that guides the SAP IBP implementation initiative.

NEW QUESTION # 35

Which runtime environments does SAP directly support on SAP BTP?

- A. SAP BTP, Cloud Foundry environment/SAP Business Technology Platform (BTP), ABAP environment/SAP BTP, Kyma runtime
- B. OpenJDK for Java applications/OpenShift for Kubernetes
- C. Kubernetes/SAP Business Technology Platform (BTP), ABAP environment

Answer: A

Explanation:

Explanation

SAP Business Technology Platform (BTP) is a suite of cloud-based platform-as-a-service (PaaS) offerings from SAP. BTP provides a variety of runtime environments for running applications, including:

SAP BTP, Cloud Foundry environment: This is a popular runtime environment for running Java, Node.js, and Python applications.

SAP Business Technology Platform (BTP), ABAP environment: This is a runtime environment for running ABAP applications.

SAP BTP, Kyma runtime: This is a runtime environment for running Kubernetes-based applications.

In addition to these runtime environments, BTP also provides a number of other services, such as:

Database services: BTP provides a variety of database services, including SAP HANA, MySQL, and PostgreSQL.

Messaging services: BTP provides a variety of messaging services, such as SAP Cloud Platform Integration and SAP Cloud Platform Event Mesh.

Storage services: BTP provides a variety of storage services, such as SAP Cloud Platform Object Storage and SAP Cloud Platform File Storage.

BTP is a comprehensive platform that provides a variety of services for running applications and managing data. The different runtime environments available in BTP allow you to choose the right environment for your specific needs.

SAP BTP supports multiple runtime environments for different purposes and skill sets. A runtime environment is any runtime that hosts applications and services. An SAP BTP environment provides integration into the SAP BTP account model, cockpit, and permissions management¹⁰. The following are the runtime environments that SAP directly supports on SAP BTP:

SAP BTP, Cloud Foundry environment: This environment allows you to create polyglot cloud applications in Cloud Foundry. It supports various programming languages, such as Java, Node.js, Python, Go, and PHP. It also provides a code-to-container packaging and deployment model, platform-managed application security patching and updates, automatic application routing, load balancing, health checks, and multilevel self-healing.

It also supports the Cloud Application Programming Model (CAP), which is an opinionated framework for developing business applications.

SAP Business Technology Platform (BTP), ABAP environment: This environment allows you to create ABAP-based cloud applications within the Cloud Foundry environment. It supports the ABAP programming language and the ABAP RESTful Programming Model (RAP), which is a framework for developing RESTful services and user interfaces. It also provides an integrated development lifecycle and enables you to reuse existing on-premise ABAP assets.

SAP BTP, Kyma runtime: This environment provides a fully managed cloud-native Kubernetes application runtime based on the open-source project "Kyma". It supports various programming languages and models, such as Node.js, Python, Go, Java, CAP, and serverless functions. It also provides a built-in service mesh, eventing framework, API gateway, service catalog, and service binding capabilities. It enables you to develop highly scalable, microservice-based applications and user-centric process extensions.

NEW QUESTION # 36

Green Elk & Company is the world's leading manufacturer of agricultural and forestry machinery. The former company slogan "Eik always runs" has recently been changed to "Eik feeds the world". One of Green Elk's strategic goals is to increase its revenue in the emerging markets of China, India, and other parts of Asia by 80 % within three years. This requires a new business model that caters to significantly smaller farms with limited budgets. You are the Chief Enterprise Architect and the decision was taken to implement regional S/4HANA productive systems while ensuring a high degree of standardization. Which of the following

implementation approach would you consider best in this case?

- A. Small buck
- B. Big Bang
- **C. Phased by Company**
- D. Phased by Application

Answer: C

Explanation:

Given the strategic goal of Green Elk & Company to expand significantly in emerging markets, the implementation approach must consider the need for localization while maintaining standardization across the organization. A Phased by Company implementation (Option D) is most suitable as it allows the company to gradually roll out the new S/4HANA systems regionally. This approach supports the requirement for a high degree of standardization, as each phase can ensure that the core elements of the system remain consistent while allowing for regional adaptations for smaller farms with limited budgets. This method reduces risk compared to a Big Bang approach, which would involve implementing everything at once and could be more disruptive, particularly in a diverse market landscape like Asia.

:

Case studies or SAP whitepapers on implementing S/4HANA in a global context with a need for both localization and standardization.

SAP implementation guides that discuss different rollout strategies, particularly for companies operating in multiple and diverse regions.

NEW QUESTION # 37

The CIO of Wanderlust strongly feels that the seldom-used legacy Marketing application cannot be the platform to rejuvenate their online marketing business. As Chief Enterprise Architect, the CIO has entrusted you with the responsibility of finding a suitable replacement that can support all current processes and also address the issues plaguing the existing application. Which of the following should you do to conclusively shortlist possible applications to replace the existing one? Note: There are 2 correct answers to this question.

- A. Compare the costs of those market leading online marketing applications and rank the top applications in terms of license, implementation, maintenance and subscription cost.
- **B. Start with current processes, map business capabilities to these processes, and identify which application(s) in the market can deliver such capabilities.**
- C. Understand the features of leading online marketing applications available in the market through product demonstrations and rank the applications in terms of features.
- **D. Adopt a process centric approach, relate Wanderlust processes to industry standard processes, and identify applications/ solutions which deliver such processes.**

Answer: B,D

Explanation:

Explanation

Starting with the current processes will help to understand the capabilities that are needed in a new application.

This will help to narrow down the field of potential applications and identify those that are most likely to meet the needs of Wanderlust.

Mapping business capabilities to these processes will help to identify the gaps in the current capabilities and the areas where improvement is needed. This will help to ensure that the new application meets the needs of Wanderlust and addresses the issues plaguing the existing application.

Relating Wanderlust processes to industry standard processes will help to identify applications that are already being used by other organizations. This can be a good way to ensure that the new application is compatible with other systems and that it can be easily integrated with existing systems.

The other two options, Comparing the costs of those market leading online marketing applications and Understanding the features of leading online marketing applications available in the market through product demonstrations and ranking the applications in terms of features, are not as critical at this stage. The costs of the applications can be compared once the shortlist of applications has been finalized. The features of the applications can be understood through product demonstrations once the shortlist has been finalized. Therefore, the best course of action is to start with the current processes, map business capabilities to these processes, and identify which application(s) in the market can deliver such capabilities. This will help to narrow down the field of potential applications and identify those that are most likely to meet the needs of Wanderlust.

Here are some of the benefits of taking a process-centric approach to selecting a new marketing application:

It can help to ensure that the new application is compatible with other systems and that it can be easily integrated with existing systems.
