EPIC CEE: Bridges Interfaces Application Essentials Exam (2026 Version) Sample Questions (Q14-Q19):

NEW QUESTION # 14

The Communications Daemon translates the HL7 data it receives into Chronicles.

- A. False
- B. True

Answer: A

Explanation:

The Communications Daemon is only responsible for the transport of the message (connecting to the external system and moving raw data). The process of translating that data and filing it into Epic's database (Chronicles) is handled by the Filer Daemon .

NEW QUESTION # 15

Editing a message in the messages activity can overwrite existing messages on the data queue.

- A. False
- B. True

Answer: A

Explanation:

When you edit a message within the Bridges Messages activity, you are not overwriting the original message on the data queue. Instead, Bridges typically creates a new version of the message for resubmission or processing, preserving the original message ' s history and integrity for auditing purposes. The original data remains intact as part of the interface ' s message log.

NEW QUESTION # 16

If you don ' t want to use Identity, a Translation Table can be used instead to map patient IDs.

- A. False
- B. True

Answer: A

Explanation:

In Epic, Identity is the required framework for mapping record-level identifiers, especially for patients. Translation Tables are intended for mapping " Category Lists " (like Gender, Race, or Marital Status) where there are a limited number of static values. Because patient IDs are unique to every record and number in the millions, they cannot be managed via a simple translation table.

NEW QUESTION # 17

When applying a filter on a related record in the message companion, you notice that a message for a particular patient is not showing up in your results. Which of the following could be a reason for this behavior?

- A. The patient is not linked to the message due to a failure error in message processing.
- B. The message companion only works for outgoing messages.
- C. The message was retrIGGERED from another message.
- D. You must specify " contains " instead of " equals " in your message search criteria.

Answer: A

Explanation:

The Message Companion relies on a successful link between a message and a specific record (like a Patient or Encounter). If a message encounters a failure error during processing (e.g., a critical identification error), Bridges may be unable to definitively link that message to the patient record in Chronicles. Because the link is missing, the message will not appear in tools like the Message Companion that filter specifically by that patient ' s ID.

NEW QUESTION # 18

Which translation table setting allows you to use the values from the category list instead of manually specifying each internal and external value?

- A. Case Sensitive
- B. Many-to-One mapping
- C. Default value
- **D. Auto-lookup**

Answer: D

Explanation:

When mapping data that exists as an Epic category list (such as Marital Status or Gender), the Auto-lookup feature significantly reduces manual build. When enabled, Bridges automatically pulls in the internal Epic values from the linked category list. The analyst then only needs to provide the corresponding external values from the vendor, rather than manually typing out every possible Epic internal ID and title.
