## Latest Mule-Dev-301 Questions | Mule-Dev-301 Free Download

No one can be responsible for you except yourself. So you must carefully plan your life and future career development. Our Mule-Dev-301 training quiz might offer you some good guidance. Maybe you never find out your real interest in the past. Now, everything is different. So you still have the chance to change. Once you are determined to learn our Mule-Dev-301 Study Materials, you will become positive and take your life seriously. Through the preparation of the exam, you will study much Mule-Dev-301 practical knowledge. Of course, passing the Mule-Dev-301 exam and get the certificate is just a piece of cake.

## Salesforce Certified MuleSoft Developer II Sample Questions (Q40-Q45):

### NEW QUESTION # 40

Refer to the exhibit.

□ The flow name is "implementation" with code for the MUnit test case.  
When the MUnit test case is executed, what is the expected result?

- A. The test case fails with an assertion error
- B. The test case passes
- C. The test throws an error and does not start
- D. The test case fails with an unexpected error type

**Answer: A**

Explanation:

Based on the code snippet and MUnit test case below, when the MUnit test case is executed, the expected result is that the test case fails with an assertion error. This is because the assert-equals processor compares two values for equality, and fails if they are not equal. In this case, the expected value is 'Hello World', but the actual value returned by the implementation flow is 'Hello Mule'. Therefore, the assertion fails and an error is thrown. Reference: <https://docs.mulesoft.com/munit/2.3/assert-equals-processor>

#### NEW QUESTION # 41

A Mule application contains two policies: Policy A and Policy B. Policy A has order 1, and Policy B has order 2. Policy A, Policy B, and a flow are defined by the configuration below.

When a HTTP request arrives at the Mule application's endpoint, what will be the execution order?

- A. A1, B1, F1, B2, A2
- B. F1, A1, B1, B2, A2
- C. B1, A1, F1, A2, B2
- D. F1, B1, A1, A2, B2

**Answer: A**

Explanation:

Based on the configuration below, when a HTTP request arrives at the Mule application's endpoint, the execution order will be A1, B1, F1, B2, A2. This is because policies are executed before and after the API implementation flow according to their order attribute. Policy A has order 1, which means it is executed first before Policy B, which has order 2. The flow is executed after both policies are executed before the flow. Then, Policy B is executed after the flow before Policy A is executed after the flow. Reference: <https://docs.mulesoft.com/api-manager/2.x/policies-policy-order>

#### NEW QUESTION # 42

A healthcare portal needs to validate the token that it sends to a Mule API. The developer plans to implement a custom policy using the HTTP Policy Transform Extension to match the token received in the header from the healthcare portal.

Which files does the developer need to create in order to package the custom policy?

- A. Deployable ZIP file, YAML configuration file
- B. XML template file, YAML configuration file
- C. JSON properties file, YAML configuration file
- D. JSON properties file, XML template file

**Answer: B**

Explanation:

To package a custom policy using the HTTP Policy Transform Extension, the developer needs to create an XML template file and a YAML configuration file. The XML template file defines the policy logic using Mule components and placeholders for user-defined properties. The YAML configuration file defines the metadata of the policy, such as its name, description, category, parameters, and dependencies. Reference: <https://docs.mulesoft.com/api-manager/2.x/http-policy-transform#packaging-the-policy>

#### NEW QUESTION # 43

The HTTP Request operation raises an HTTP CONNECTIVITY error.

Which HTTP status code and body are returned to the web client?

- A. HTTP Status Code:500.  
Body 'Error in processing your request'
- B. HTTP Status Code:500.

Body 'The HTTP CONNECTIVITY Error description

- C. HTTP Status Code:200.  
Body 'Error in processing your request
- D. HTTP Status Code:500.  
Body 'Error in processing your request

**Answer: A**

Explanation:

When the HTTP Request operation raises an HTTP CONNECTIVITY error, it triggers an on-error-continue handler that sets a payload with 'Error in processing your request'. Since no status code is explicitly set in this handler, it defaults to 500 (INTERNAL SERVER ERROR). Therefore, the web client receives an HTTP response with status code 500 and body 'Error in processing your request'. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/error-handling#on-error-continue>

#### NEW QUESTION # 44

An API has been built to enable scheduling email provider. The front-end system does very little data entry validation, and problems have started to appear in the email that go to patients. A validate-customer" flow is added validate the data.

What is he expected behavior of the 'validate-customer" flow?

- A. If all of the values are invalid the last validation error is raised:SCHEDULE:INVALID\_CUSTOMER\_NAME
- B. If the appointment date and customer name are invalid, a SCHEDULE:INVALID\_APPOINTMENT\_DATE error is raised
- C. If the email address is invalid, processing continues to see if the appointment data and customer name are also invalid
- **D. If only the email address is invalid a VALIDATION.INVALID\_EMAIL error is raised**

**Answer: D**

Explanation:

The validate-customer flow uses an until-successful scope to validate each field of the customer data. The until-successful scope executes its processors until they succeed or exhausts the maximum number of retries. If any processor fails, it raises an error and stops executing the remaining processors. Therefore, if only the email address is invalid, a VALIDATION.INVALID\_EMAIL error is raised and the validation of appointment date and customer name is skipped. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/until-successful-scope>

#### NEW QUESTION # 45

.....

You will remain updated with the Mule-Dev-301 practice test style, evaluate and improve your concepts. Users of the software can improve what they lack before Salesforce Mule-Dev-301 final exam. Practicing for the Mule-Dev-301 Practice Test, again and again, can be nerve-wracking, so in this situation Exams. Salesforce offer an easy-to-use Mule-Dev-301 PDF questions file.
