

2026 Valid Databricks-Certified-Professional-Data-Engineer Vce 100% Pass | Valid Exam Databricks-Certified-Professional-Data-Engineer Training: Databricks Certified Professional Data Engineer Exam

For candidates who want to pass the exam just one time, the valid Databricks-Certified-Professional-Data-Engineer study materials are quite necessary. We are a professional exam materials provider, and we can offer you valid and effective Databricks-Certified-Professional-Data-Engineer exam materials. In addition, we have a professional team to collect the latest information for the exam, and if you choose us, we can ensure you that you can get the latest information for the exam. We offer you free update for one year for Databricks-Certified-Professional-Data-Engineer study materials, and the latest version will be sent to your email automatically. If you have any questions, you can consult our online chat service stuff.

Databricks Certified Professional Data Engineer exam is a comprehensive assessment that covers a wide range of topics related to data engineering using Databricks. Databricks-Certified-Professional-Data-Engineer Exam consists of multiple-choice questions and performance-based tasks that require candidates to demonstrate their ability to design, build, and optimize data pipelines using Databricks. Databricks-Certified-Professional-Data-Engineer exam is available online and can be taken from anywhere in the world, making it a convenient option for data professionals who want to validate their expertise in Databricks. Upon successful completion of the exam, candidates will receive a Databricks Certified Professional Data Engineer certification, which will demonstrate their proficiency in data engineering using Databricks.

Exam Databricks-Certified-Professional-Data-Engineer Training & Databricks-Certified-Professional-Data-Engineer Sample Exam

Having a Databricks Certification Databricks-Certified-Professional-Data-Engineer Exam certificate can help people who are looking for a job get better employment opportunities in the IT field and will also pave the way for a successful IT career for them.

The Databricks Certified Professional Data Engineer Exam certification exam is a computer-based test that consists of multiple-choice questions. Candidates have two hours to complete the exam, and they must achieve a minimum score of 70% to pass. Databricks-Certified-Professional-Data-Engineer Exam is proctored, and candidates must have a reliable internet connection and a computer with a webcam and microphone to take the test.

Databricks Certified Professional Data Engineer Exam Sample Questions (Q51-Q56):

NEW QUESTION # 51

A dataset has been defined using Delta Live Tables and includes an expectations clause:

1. CONSTRAINT valid_timestamp EXPECT (timestamp > '2020-01-01')

What is the expected behaviour when a batch of data containing data that violates these constraints is processed?

- A. Records that violate the expectation cause the job to fail
- B. Records that violate the expectation are dropped from the target dataset and loaded into a quarantine table
- **C. Records that violate the expectation are added to the target dataset and recorded as invalid in the event log**
- D. Records that violate the expectation are added to the target dataset and flagged as in-valid in a field added to the target dataset
- E. Records that violate the expectation are dropped from the target dataset and recorded as invalid in the event log

Answer: C

NEW QUESTION # 52

You noticed that colleague is manually copying the notebook with _bkp to store the previous ver-sions, which of the following feature would you recommend instead.

- A. Databricks notebooks can be exported into dbc archive files and stored in data lake
- B. Databricks notebooks should be copied to a local machine and setup source control locally to version the notebooks
- **C. Databricks notebooks support change tracking and versioning**
- D. Databricks notebook can be exported as HTML and imported at a later time

Answer: C

Explanation:

Explanation

Answer is Databricks notebooks support automatic change tracking and versioning.

When you are editing the notebook on the right side check version history to view all the changes, every change you are making is captured and saved.

NEW QUESTION # 53

An upstream system has been configured to pass the date for a given batch of data to the Databricks Jobs API as a parameter. The notebook to be scheduled will use this parameter to load data with the following code:

df = spark.read.format('parquet').load(f'/mnt/source/(date)')

Which code block should be used to create the date Python variable used in the above code block?

- A. import sys
date = sys.argv[1]

- B. `date = dbutils.notebooks.getParam("date")`
- C. `date = spark.conf.get('date')`
- D. `dbutils.widgets.text("date", "null")`
`date = dbutils.widgets.get("date")`
- E. `input_dict = input()`
`date= input_dict["date"]`

Answer: B

Explanation:

Explanation

This is the correct way to get a parameter passed to a notebook by the Databricks Jobs API. The `dbutils.notebooks.getParam` method returns the value of a parameter passed to a notebook as a string. If no parameter with that name is passed, it returns `None` by default. You can also specify a default value as a second argument. Verified References: Databricks Certified Data Engineer Professional, under "Databricks Tooling" section; Databricks Documentation, under "Pass parameters to a notebook" section.

NEW QUESTION # 54

You are asked to debug a databricks job that is taking too long to run on Sunday's, what are the steps you are going to take to identify the step that is taking longer to run?

- A. Under Workflow UI and jobs select job you want to monitor and select the run, notebook activity can be viewed.
- B. Once a job is launched, you cannot access the job's notebook activity.
- C. A notebook activity of job run is only visible when using all-purpose cluster.
- D. Use the compute's spark UI to monitor the job activity.
- E. Enable debug mode in the Jobs to see the output activity of a job, output should be available to view.

Answer: A

Explanation:

Explanation

The answer is, Under Workflow UI and jobs select job you want to monitor and select the run, notebook activity can be viewed. You have the ability to view current active runs or completed runs, once you click the run you can see the A picture containing graphical user interface Description automatically generated

Click on the run to view the notebook output

NEW QUESTION # 55

The data engineering team is using a bunch of SQL queries to review data quality and monitor the ETL job every day, which of the following approaches can be used to set up a schedule and auto-mate this process?

- A. They can schedule the query to refresh every 1 day from the SQL endpoint's page in Databricks SQL.
- B. They can schedule the query to refresh every 12 hours from the SQL endpoint's page in Databricks SQL
- C. They can schedule the query to run every 12 hours from the Jobs UI.
- D. **They can schedule the query to refresh every 1 day from the query's page in Databricks SQL.**
- E. They can schedule the query to run every 1 day from the Jobs UI

Answer: D

Explanation:

Explanation

Explanation

Individual queries can be refreshed on a schedule basis,

To set the schedule:

1. Click the query info tab.

Graphical user interface, text, application, email Description automatically generated

* Click the link to the right of Refresh Schedule to open a picker with schedule intervals.

Graphical user interface, application Description automatically generated

* Set the schedule.

The picker scrolls and allows you to choose:

* An interval: 1-30 minutes, 1-12 hours, 1 or 30 days, 1 or 2 weeks

* A time. The time selector displays in the picker only when the interval is greater than 1 day and the day selection is greater than 1 week. When you schedule a specific time, Databricks SQL takes input in your computer's timezone and converts it to UTC. If you want a query to run at a certain time in UTC, you must adjust the picker by your local offset. For example, if you want a query to execute at 00:00 UTC each day, but your current timezone is PDT (UTC-7), you should select 17:00 in the picker:

Graphical user interface Description automatically generated

* Click OK.

Your query will run automatically.

If you experience a scheduled query not executing according to its schedule, you should manually trigger the query to make sure it doesn't fail. However, you should be aware of the following:

* If you schedule an interval-for example, "every 15 minutes"-the interval is calculated from the last successful execution. If you manually execute a query, the scheduled query will not be executed until the interval has passed.

* If you schedule a time, Databricks SQL waits for the results to be "outdated". For example, if you have a query set to refresh every Thursday and you manually execute it on Wednesday, by Thursday the results will still be considered "valid", so the query wouldn't be scheduled for a new execution. Thus, for example, when setting a weekly schedule, check the last query execution time and expect the scheduled query to be executed on the selected day after that execution is a week old. Make sure not to manually execute the query during this time.

If a query execution fails, Databricks SQL retries with a back-off algorithm. The more failures the further away the next retry will be (and it might be beyond the refresh interval).

Refer documentation for additional info,
