Which tasks can you perform in data analyzer? Note: There are 2 correct answers to this question.

- A. Drill down on data
- B. Filter data
- C. Input data
- D. Create cross-calculation

Answer: A,B

Explanation:
In Data Analyzer, users can perform various tasks to analyze their data, including filtering data and drilling down on data. NEW QUESTION # 30
What can you use to organize dimensions into logical categories in a live model?

- A. Parent-child hierarchy
- B. Groups
- C. Level-based hierarchy
- D. Value driver tree

Answer: A

Explanation:
In a live model within SAP Analytics Cloud, dimensions can be organized into logical categories using either level-based hierarchies or parent-child hierarchies. Level-based hierarchies are used when the relationships between items are defined by distinct levels, such as Geography might be divided into Country, State, and City levels. Parent-child hierarchies, on the other hand, are useful when the data's hierarchy is not strictly defined by levels but by a parent relationship where a child member is associated with a parent member, which is common in organizational structures or product categories.
