Salesforce Certified Integration Architect latest study dumps & Integration-Architect simulated test torrent

With vast experience in this field, TestSimulate always comes forward to provide its valued customers with authentic, actual, and genuine Integration-Architect exam dumps at an affordable cost. All the Integration-Architect questions given in the product are based on actual examination topics. TestSimulate regularly updates Integration-Architect Practice Exam material to ensure that it keeps in line with the test. In the same way, TestSimulate provides a free demo before you purchase so that you may know the quality of the Integration-Architect dumps.

Salesforce Certified Integration Architect Sample Questions (Q35-Q40):

NEW QUESTION # 35

Northern Trail Outfitters (NTO) use Salesforce to track leads, opportunities, and to capture order details.

However, Salesforce isn't the system that holds or processes orders. After the order details are captured in Salesforce, an order must be created in the remote system, which manages the orders life cycle. The Integration Architect for the project is recommending a remote system that will subscribe to the platform event defined in Salesforce.

Which integration pattern should be used for this business use case?

- A. Fire and Forget
- B. Batch Data Synchronization
- C. Remote Call In
- D. Request and Reply

Answer: A

Explanation:

The Fire and Forget pattern is suitable for this business use case because it allows sending a message from Salesforce to the remote system without waiting for a response or acknowledgement. This reduces the latency and complexity of the integration and enables asynchronous processing of the orders in the remote system. The platform event defined in Salesforce can be used to publish the order details to the remote system, which can subscribe to the event and create the order accordingly.

NEW QUESTION # 36

Which two requirements should the Salesforce Community Cloud support for self-registration and SSO?
Choose 2 answers

- A. OpenId Connect Authentication Provider and just-in-time provisioning
- B. OpenId Connect Authentication Provider and Registration Handler
- C. SAML SSO and just-in-time provisioning
- D. SAML SSO and Registration Handler

Answer: B,C

NEW QUESTION # 37

Universal Containers (UC) is a leading provider of management training globally. UC embarked on a Salesforce transformation journey to allow students to register for courses in the Salesforce community. UC has a learning system that masters all courses and student registration.

UC requested a near real-time feed of student registration from Salesforce to the learning system. The integration architect recommends using Salesforce event.

Which API should be used for the Salesforce platform event solution?

- A. SOAP API
- B. REST API
- C. Streaming API
- D. Tooling API

Answer: D

Explanation:

Explanation

The API that should be used for the Salesforce platform event solution is Tooling API.

Tooling API is a specialized API that exposes metadata used in developer tooling that you can access through REST or SOAP.

You can use Tooling API to create, update, or delete platform event definitions and fields. Streaming API is used to subscribe to platform events and receive notifications when they are published.

NEW QUESTION # 38

Only authorized users are allowed access to the EBS and the Enterprise DMS.

Customers call Customer Support when they need clarification on their bills. Customer Support needs seamless access to customer billing information from the E and view generated bills from the DMS.

Which three authorization and authentication needs should an integration consultant consider while integrating the DMS and ESB with Salesforce?

should an integration consultant consider while integrating the DMS and ESB with Salesforce?

Choose 3 answers

- A. Users should be authorized to view information specific to the customer they are servicing without a need to search for customer.
- B. Identify options to maintain DMS and EBS authentication and authorization details in Salesforce.
- C. Consider Enterprise security needs for access to DMS and EBS.
- D. Users should be authenticated into DMS and EBS without having to enter username and password.
- E. Consider options to migrate DMS and EBS into Salesforce.

Answer: A,C,D

Explanation:

The integration consultant should consider the following authorization and authentication needs while integrating the DMS and ESB with Salesforce:

Users should be authorized to view information specific to the customer they are servicing without a need to search for customer.

This means that the integration should provide a seamless and contextual access to the customer billing information and generated bills from the DMS and ESB, based on the customer record or case that the user is working on in Salesforce.

Consider Enterprise security needs for access to DMS and ESB. This means that the integration should comply with the security policies and standards of the Enterprise, such as encryption, auditing, logging, monitoring, etc.

Users should be authenticated into DMS and ESB without having to enter username and password. This means that the integration should use a single sign-on (SSO) mechanism that allows users to access multiple systems with one login credential, such as OAuth or SAML. References: Authorization Through Connected Apps and OAuth 2.0, Single Sign-On for Desktop and Mobile Applications using SAML and OAuth

NEW QUESTION # 39

Northern Trail Outfitters is planning to create a native employee facing mobile app with the look and feel of Salesforce's Lightning Experience. The mobile app needs to integrate with their Salesforce org. Which Salesforce API should be used to implement this integration?

- A. Streaming API
- **B. User Interface API**
- C. Connect REST API
- D. REST API

Answer: B

Explanation:

Explanation

User Interface API should be used to implement this integration. User Interface API is a RESTful API that allows you to create native mobile apps and custom web apps with the look and feel of Salesforce's Lightning Experience. User Interface API provides access to metadata, data, and UI components, such as layouts, actions, picklists, and record types. User Interface API also handles security, performance, and compatibility across different devices and browsers.
