D-PST-DY-23 Valid Study Notes & Exam D-PST-DY-23 Passing Score

Thus, you can see how a single decision can bring a lot of positive and fruitful changes in your life. However, if you are thinking about what if you were not able to get the EMC D-PST-DY-23 certification or pass the Dell PowerStore Deploy 2023 Exam (D-PST-DY-23) exam? Don't worry, you will find it easy to adjust to this new thing and get complete support from the GetValidTest who offer EMC D-PST-DY-23 Exam Questions and practice exams for the EMC D-PST-DY-23 certification exam.

EMC Dell PowerStore Deploy 2023 Exam Sample Questions (Q125-Q130):

NEW QUESTION # 125

SIMULATION

A storage administrator needs to group Volume-1 and Volume-2 for consistency. The group should have a snapshot every day that is retained for 25 hours.

Use the simulator to make this configuration change.

When you have finished continue to the next question.

Answer:

Explanation:

See the steps in Explanation

Explanation:

1. Open the simulator and log in with the default credentials: admin/Password123#.
2. SelectStorage>Volumesfrom the left menu.
3. SelectVolume- 1andVolume-2from the list of volumes and clickGroup.
4. Enter a name for the volume group, such asConsistent-Group, and clickCreate.
5. SelectProtection>Protection Policiesfrom the left menu.
6. Click+ CREATEto launch the Create Protection Policy wizard.
7. Enter a name for the protection policy, such asDaily-Snapshot, and clickNext.
8. Click+ CREATEto create a new snapshot rule for the policy.
9. Enter a name for the snapshot rule, such asDaily-Rule, and clickNext.
10. SelectAll Daysfor the days to run the rule andTime of dayfor the frequency. Enter00:00as the start time and clickNext.
11. Enter25as the retention hours and clickNext.
12. Review the summary and clickFinishto create the snapshot rule.
13. ClickNextto continue the protection policy wizard.
14. Review the summary and clickFinishto create the protection policy.
15. SelectStorage>Volume Groupsfrom the left menu.
16. SelectConsistent-Groupfrom the list of volume groups and clickEdit.
17. ClickProtection Policyand selectDaily-Snapshotfrom the drop-down list. ClickSave.
18. The volume group is now configured with a protection policy that creates a snapshot every day at 00:00 and retains it for 25 hours.

NEW QUESTION # 126

What is the purpose of the PowerStore Quick Start Guide during the initial configuration process?

- A. To provide entertainment options
- B. To enable advanced system tuning
- C. To troubleshoot hardware failures
- D. To guide users through setup steps

Answer: D

NEW QUESTION # 127

Which two statements are true regarding host group configurations? (Choose two.)

- A. Volume-related operations are made across all hosts in the group.
- B. Allows mapping volumes to individual hosts in the host group.
- C. Maps volumes to all hosts in the host group.
- D. Allows mixed protocol type hosts within the same host group.

Answer: A,C

NEW QUESTION # 128

What parameter is commonly defined in a protection policy for virtual machines created on vVols?

- A. Network bandwidth allocation
- B. CPU utilization limits
- C. Storage tiering configuration
- **D. Backup frequency and retention**

Answer: D

NEW QUESTION # 129

What is the default exposed LUN0 used for?

- A. vVol protocol endpoint
- B. Internal migration reserve LUN
- **C. Storage Array Controller Device**
- D. NVMe Discovery Controller

Answer: C

Explanation:

LUN 0 and the Storage Array Controller Device (SACD)

In PowerStore, LUN 0 has a specific and important function: it's used for the Storage Array Controller Device (SACD).

SACD: The SACD is a virtual device that provides access to the PowerStore appliance's internal management and control functions. It's essential for tasks like: Monitoring the health and status of the array Managing and configuring storage resources Troubleshooting issues LUN 0 as the Access Point: LUN 0 serves as the access point to the SACD. It allows authorized users and management tools to communicate with the SACD and perform necessary management operations.

Why other options are incorrect:

B). vVol protocol endpoint: PowerStore uses LUNs 254 and 255 for the vVol (vSphere Virtual Volumes) protocol endpoint.

C). Internal migration reserve LUN: PowerStore doesn't use a specific LUN for internal migration reserves. Migration operations utilize the cluster network and available storage resources dynamically.

D). NVMe Discovery Controller: NVMe discovery in PowerStore doesn't rely on a dedicated LUN. It uses standard NVMe-oF discovery mechanisms over the network. Important Notes Not a Typical LUN: LUN 0 is not a standard LUN that can be used for storing data. It's a specialized LUN dedicated to the SACD.

Automatic Exposure: PowerStore exposes LUN 0 by default. You don't need to manually create or configure it.

Dell PowerStore Reference

PowerStore: Host Configuration Guide: This guide provides information about connecting hosts to PowerStore, including details about specialized LUNs like the SACD. You can find the latest version of this guide on the Dell Support site.
