# CertNexus CyberSec First Responder Sample Questions (Q86-Q91):

## **NEW QUESTION #86**

Network infrastructure has been scanned and the identified issues have been remediated. What is the next step in the vulnerability assessment process?

- A. Generating reports
- B. Establishing scope
- C. Conducting an audit

• D. Assessing exposures

#### Answer: C

### **NEW QUESTION #87**

A security investigator has detected an unauthorized insider reviewing files containing company secrets. Which of the following commands could the investigator use to determine which files have been opened by this user?

- A. netstat
- B. ps
- C. ls
- D. Isof

Answer: D

#### **NEW QUESTION #88**

While reviewing some audit logs, an analyst has identified consistent modifications to the sshd\_config file for an organization's server. The analyst would like to investigate and compare contents of the current file with archived versions of files that are saved weekly. Which of the following tools will be MOST effective during the investigation?

- A. diff
- B. sort \*
- C. more \* | grep
- D. cat \* | cut -d ',' -f 2,5,7

Answer: A

### **NEW QUESTION #89**

What is the definition of a security breach?

- A. Unauthorized access that violates the authentication, authorization, and accounting of an information asset through intentional access, destruction, or manipulation of an information asset.
- B. An event or series of correlated events that indicate a potential violation of some control or policy.
- C. Unauthorized access that violates the confidentiality, integrity, or availability of an information asset in the form of unintentional access, destruction, or manipulation of an information asset.
- D. An event or series of uncorrelated events that indicate a potential violation of some control or policy has occurred.

#### Answer: A

#### Explanation:

A security breach refers to unauthorized access that compromises the security of an information asset, violating controls such as authentication, authorization, or accounting. This breach often involves intentional actions like accessing, destroying, or manipulating the asset without proper authorization.

# NEW QUESTION # 90

An organization was recently hit with a ransomware attack that encrypted critical documents and files that were stored on the corporate file server.

Which of the following provides the organization with the BEST chance for recovering their data?

- A. Offsite backups
- B. Application white listing!
- C. Antivirus software
- D. Paying the ransom

#### Answer: A

Explanation:

Offsite backups provide the best chance for data recovery after a ransomware attack. Since the critical documents and files are encrypted, having backups stored in a secure offsite location allows the organization to restore the files without having to rely on paying the ransom or trying to recover the data from the compromised system.
