Here our company can be your learning partner and try our best to help you to get success in the 1Y0-205 exam. Why should you choose our company with 1Y0-205 Preparation braindumps? We have the leading brand in this career and successfully help tens of thousands of our customers pass their 1Y0-205 exam and get admired certification.

Citrix Virtual Apps and Desktops Administration Sample Questions (Q18-Q23):

NEW QUESTION # 18

Which layer contains the Site database in a Citrix Virtual Apps and Desktops Architecture model?

- A. User
- B. Control
- C. Access
- D. Resource

Answer: C

NEW QUESTION # 19

When the Local Host Cache (LHC) is enabled, during a Site database outage _____ will reference _____ to broker new sessions. (Choose the correct option to complete the sentence.)

- A. the principal Delivery Controller; its local database
- B. the principal Delivery Controller; its local XML file
- C. all Delivery Controllers; their local database
- D. all Delivery Controllers; their local XML file

Answer: C

Explanation:

With Local Host Cache (LHC) enabled, each Delivery Controller maintains a synchronized local copy of the Site database. During a database outage, all Delivery Controllers reference their local database to continue brokering new sessions, ensuring high availability.

NEW QUESTION # 20

A user calls the help desk to report that when launching any application from within their published desktop session, it takes a long time and the overall performance is poor. Which Citrix Director report can a Citrix Administrator use to initiate the investigation of the issue?

- A. Machine Utilization in Machine Details
- B. Launch Failures in Trends
- C. Load Evaluator in Trends
- D. Session Data in Filters

Answer: D

Explanation:

The Session Data in Filters report in Citrix Director provides detailed performance metrics for individual user sessions, including logon duration, application launch times, and resource utilization. This report is the best starting point to investigate performance complaints within a published desktop session.

NEW QUESTION # 21

A Delivery Group has been created to publish APP_A, APP_B, and APP_C to an AD Group called "HR." There are 10 users in the AD group (HR1-HR10). It was found that a specific user, HR10, should not have access APP_A. What must be done to make sure the HR group can access the applications, but HR10 does not have access to APP_A?

- A. Limit Visibility on APP_A to HR1-HR9
- B. Remove APP_A from the Delivery Group
- C. Remove HR10 from the Delivery Group
- D. Limit Visibility on APP_A to HR10

Answer: A

Explanation:

Application visibility controls in Citrix Studio allow administrators to restrict which users or groups can see and launch specific applications. By limiting APP_A's visibility to HR1-HR9, all HR users except HR10 retain access, ensuring the Delivery Group setup remains intact while excluding only the specified user.

NEW QUESTION # 22

Which two resource locations are supported for machines running the Virtual Delivery Agent (VDA) when using the Citrix Virtual Apps and Desktops service? (Choose two.)

- A. VMware Workspace One
- B. Amazon Web Services (AWS)
- C. Citrix Cloud
- D. On-premises datacenter

Answer: C,D

NEW QUESTION # 23

.....
