

# 100% Pass 2026 Snowflake Reliable DEA-C02 Latest Braindumps Free

DOWNLOAD the newest RealExamFree DEA-C02 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1QgN-MJL1AxID-kBOKXAecgG-oJWFDZI0>

Are you preparing for the DEA-C02 test recently? You may have a strong desire to get the DEA-C02 exam certification. Now, you may be pleasure, RealExamFree DEA-C02 can relieve your exam stress. Snowflake DEA-C02 training camps cover nearly full questions and answers you need, and you can easily acquire the key points, which will contribute to your exam. Besides, Snowflake training dumps are edited by senior professional with rich hands-on experience and several years' efforts, and it has reliable accuracy and good application. I think you will pass your exam test with ease by the study of DEA-C02 Training Material. What's more, if you buy DEA-C02 exam practice cram, you will enjoy one year free update. So you do not worry that the information you get will be out of date, you will keep all your knowledge the latest.

Do not miss the opportunity to buy the best DEA-C02 preparation questions in the international market which will also help you to advance with the times. If you are still worrying about our DEA-C02 exam questions, I would like to help you out with the free demos of our DEA-C02 Training Materials compiled by our company. There are so many strong points of our DEA-C02 training materials, such as wide applicability, sharpen the saw and responsible after sale service to name.

**>> DEA-C02 Latest Braindumps Free <<**

## Latest DEA-C02 Dumps Ebook & DEA-C02 Certification

Even you have no basic knowledge about the DEA-C02 study materials. You still can pass the exam with our help. The key point is that you are serious on our DEA-C02 exam questions and not just kidding. Our DEA-C02 practice engine can offer you the most professional guidance, which is helpful for your gaining the certificate. And our DEA-C02 learning guide contains the most useful content and keypoints which will come up in the real exam.

## Snowflake SnowPro Advanced: Data Engineer (DEA-C02) Sample Questions (Q270-Q275):

**NEW QUESTION # 270**

You are implementing Snowpipe using the REST API for a custom data ingestion process. Your application uploads data files to an internal stage named '@MY STAGE' and then calls the Snowpipe REST API to trigger the data load. However, you are encountering 'insufficient privileges' errors when calling the API, even though the role used to authenticate the API requests has the 'USAGE' privilege on the stage and the 'OPERATE' privilege on the pipe. The Pipe name is 'MY PIPE'. Which of the following is the MOST LIKELY cause of this error, and what can you do to resolve it?

- A. The Snowpipe's 'EXECUTE TASK' privilege has not been granted to the role used for the REST API calls. Grant the 'EXECUTE TASK' privilege to the role.
- B. The role doesn't have the 'USAGE' privilege on the database and schema containing the stage and pipe. Grant 'USAGE' on the database and schema.
- C. The role used to authenticate the API requests requires the 'INSERT' privilege on the target table in addition to 'USAGE' on the stage and 'OPERATE' on the pipe. Grant the 'INSERT' privilege to the role.
- D. The role used to authenticate the API requests does not have the 'OWNERSHIP' privilege on the Snowpipe.
- E. The role used to authenticate the API requests does not have the 'SELECT' privilege on the underlying table that the Snowpipe is loading data into.

**Answer: B,C**

Explanation:

When using the Snowpipe REST API, the role used to authenticate the API calls must have the 'INSERT' privilege on the target table. While 'USAGE' on the stage and 'OPERATE' on the pipe are necessary, they are not sufficient. Also, the user needs to have usage permission on the database and Schema where Stage and Pipe reside. Option A is not entirely accurate; 'SELECT' is not directly needed for Snowpipe to function. 'OWNERSHIP' (B) is not required for triggering the pipe. 'EXECUTE TASK' (D) is not relevant to Snowpipe REST API calls. The role performing the COPY operation (through Snowpipe triggered by the REST API) needs the 'INSERT' privilege to write data to the target table.

#### NEW QUESTION # 271

You have created a masking policy called which redacts salary information based on the user's role. You have applied this policy to the 'SALARY' column in the 'EMPLOYEES' table. However, after applying the policy, you notice that even users with the 'ACCOUNTADMIN' role are seeing the masked data, which is not the intended behavior. The intention is that 'ACCOUNTADMIN' and 'SECURITYADMIN' roles should always see the real salary data'. What is the MOST likely cause of this issue and what would you suggest fix that?

- A. The masking policy is not properly activated. Run the ALTER TABLE EMPLOYEES MODIFY COLUMN SALARY SET MASKING POLICY salary\_mask' command again.
- B. The 'ACCOUNTADMIN' and roles need to have 'SELECT' privilege on the 'SNOWFLAKACCOUNT USAGE.MASKING POLICIES view
- C. The 'ACCOUNTADMIN' and 'SECURITYADMIN' roles do not have the 'APPLY MASKING POLICY privilege. Grant this privilege to the roles.
- D. The masking policy does not explicitly exclude the 'ACCOUNTADMIN' and 'SECURITYADMIN' roles. Modify the masking policy to include a condition that checks for these roles and returns the original value if they are active. e.g., 'CASE WHEN IN ('ACCOUNTADMIN', 'SECURITYADMIN') THEN val ELSE END'
- E. The 'ACCOUNTADMIN' role does not have the 'OWNERSHIP' privilege on the table. Grant the 'OWNERSHIP' privilege to 'ACCOUNTADMIN' on the 'EMPLOYEES' table.

**Answer: D**

Explanation:

The most likely cause is that the masking policy doesn't explicitly bypass masking for the 'ACCOUNTADMIN' and 'SECURITYADMIN' roles. Masking policies, by default, apply to all users unless explicitly excluded. The correct fix is to modify the policy to check for these roles and return the original value if they are active. Options A and D are irrelevant. Ownership isn't directly related to bypassing masking policies. There is no 'APPLY MASKING POLICY' privilege. Option C won't change the behavior. E is also irrelevant. Access to 'MASKING POLICIES' view is for monitoring and auditing masking policies, not for applying them.

#### NEW QUESTION # 272

You have implemented external tokenization for a sensitive data column in Snowflake using a UDF that calls an external API. After some time, you discover that the external tokenization service is experiencing intermittent outages, causing queries using the tokenized column to fail. What is the BEST approach to mitigate this issue and maintain data availability while minimizing the risk of

exposing the raw data?

- A. Modify the tokenization UDF to cache tokenization mappings locally within the Snowflake environment. When the external service is unavailable, the UDF can use the cached values.
- B. Replicate the tokenized table to another Snowflake region and switch to the replica during outages of the primary region. The tokenization service is guaranteed to be available in at least one region.
- C. Implement a try-catch block within the UDF. In the catch block, return a pre-defined, non-sensitive default value instead of attempting to call the external tokenization service. You can't return the raw value.
- D. Implement a masking policy on the column that returns the raw data when the tokenization UDF is unavailable, detected by catching exceptions within the policy logic.
- E. Implement a try-catch block within the UDF. In the catch block, return a pre-defined static token value (same value always) instead of attempting to call the external tokenization service. You can't return the raw value.

**Answer: C**

Explanation:

Returning the raw data (option A) defeats the purpose of tokenization. Caching tokenization mappings locally (option C) introduces security risks and potential data synchronization issues. Replicating the table (option B) doesn't solve the immediate problem of the tokenization service outage; it only addresses regional disaster recovery. Returning a default, non-sensitive value (option D) maintains data integrity and avoids exposing sensitive data during outages. Returning the same static token (Option E) for all values could cause data corruption.

#### NEW QUESTION # 273

You have a Snowflake stage named that points to an S3 bucket containing JSON log files. You want to create a directory table to track the files and their metadata'. The log files are continuously being added to the bucket. Which of the following sets of steps is the MOST efficient way to create and maintain an up-to-date directory table for this stage?

- A. Option D
- B. Option A
- C. Option E
- D. Option B
- E. Option C

**Answer: A**

Explanation:

Option D is the most efficient. While S3 event notifications (option B) can be faster, setting up and maintaining the event notification infrastructure and ensuring delivery can be complex. only refreshes at creation. There is no REFRESH\_AUTOMATICALLY or 'AUTO REFRESH' clause. Scheduling a Snowflake Task provides a managed and relatively simple way to keep the directory table up-to-date. The refresh interval for task should be configured for optimal performance.

#### NEW QUESTION # 274

You are building a data pipeline in Snowflake that uses an external function to perform sentiment analysis on customer reviews stored in a table named 'CUSTOMER REVIEWS'. The external function 'sentiment\_analyzer' is hosted on AWS Lambda and requires an API key for authentication. You want to ensure that the API key is securely passed to the Lambda function and prevent unauthorized access. Which of the following approaches represents the MOST secure and recommended method to manage the API key?

- A. Create a Snowflake secret object to store the API key and reference it in the external function definition using the 'USING' clause and 'SYSTEM\$GET SECRET function.
- B. Embed the API key directly into the AWS Lambda function's environment variables, avoiding any transmission from Snowflake.
- C. Store the API key in a Snowflake table with restricted access and retrieve it within the external function's logic.
- D. Pass the API key as a parameter to the external function each time it is called.
- E. Store the API key directly in the external function definition as a string literal within the 'AS' clause.

**Answer: A**

Explanation:

Storing the API key directly in the function definition (A) or passing it as a parameter (B) exposes the key. Storing it in a table (D) is also less secure than using Snowflake secrets. While embedding the API key into the AWS Lambda function's environment variables (E) improves security, it doesn't address securing the key during transmission from Snowflake and offers no auditability. The most secure approach is to use a Snowflake secret object (C) to store the API key securely and reference it in the external function definition using the clause and 'SYSTEM\$GET SECRET function. This method provides encryption at rest and in transit and allows for centralized management and auditing of secrets.

## NEW QUESTION # 275

.....

Our Snowflake DEA-C02 test braindump materials is popular based on that too. As we all know the passing rate for exams is low, the wise choice for candidates will select valid Snowflake DEA-C02 test braindump materials to make you pass exam surely and fast. Our Snowflake DEA-C02 test simulations will help you twice the result with half the effort.

**Latest DEA-C02 Dumps Ebook:** <https://www.realexamfree.com/DEA-C02-real-exam-dumps.html>

With the assist of DEA-C02 latest training guide, you will get success, Snowflake DEA-C02 Latest Braindumps Free So that you can learn the various technologies and subjects, You can pass the real exam easily with our latest DEA-C02 vce dumps and this is the only smartest way to get success, Snowflake DEA-C02 Latest Braindumps Free What is more, we have never satisfied our current accomplishments, For this reason, we want to make your journey smooth by providing you with smart tips to make the most out of your SnowPro Advanced: Data Engineer (DEA-C02) DEA-C02 study material for the SnowPro Advanced: Data Engineer (DEA-C02) DEA-C02 certification programs and clear it in one go.

To learn the behavior and buying habits of your customers, Contact those members and see whether they would be willing to do the same modding for you, With the assist of DEA-C02 Latest Training guide, you will get success.

## Quiz Snowflake - DEA-C02 - The Best SnowPro Advanced: Data Engineer (DEA-C02) Latest Braindumps Free

So that you can learn the various technologies and subjects, You can pass the real exam easily with our latest DEA-C02 vce dumps and this is the only smartest way to get success.

What is more, we have never satisfied our current DEA-C02 accomplishments, For this reason, we want to make your journey smooth by providing you with smart tips to make the most out of your SnowPro Advanced: Data Engineer (DEA-C02) DEA-C02 study material for the SnowPro Advanced: Data Engineer (DEA-C02) DEA-C02 certification programs and clear it in one go.
