SAFe-Practitioner Exam is designed to evaluate the candidate's understanding of the SAFe framework and their ability to implement it in large organizations.

## Scrum SAFe Practitioner Exam (6.0) Sample Questions (Q105-Q110):

### NEW QUESTION # 105

Which statement is true about Features and Stories?

- A. They are prioritized by the team
- **B. Features can be larger than an Iteration but Stories should be small enough to fit into an Iteration**
- C. They are estimated like User Stories
- D. Features should be small enough to fit into an Iteration

**Answer: B**

Explanation:

In SAFe, a clear distinction is made between the purpose, structure and content of features, and that of stories (including enablers). Features are visible units of business intent that the customer recognizes, and it's at this level of detail that the customer is able to prioritize their needs<sup>1</sup>. Features are maintained in the ART Backlog and sized to fit in a PI so that each delivers new value<sup>2</sup>. Stories are short descriptions of a small piece of desired functionality written from the user's perspective. Stories are the primary artifact used to define system behavior in Agile<sup>3</sup>. Stories are small and must be completed in a single iteration<sup>3</sup>. Therefore, features can be larger than an iteration but stories should be small enough to fit into an iteration. ### NEW QUESTION # 106

Which statement describes one element of the CALMR approach to DevOps?

- **A. Establish a work environment of shared responsibility**
- B. Keep everything under version control
- C. Build cross-functional Agile Release Trains around the flow of value to the Customer
- D. Decentralize decision making

**Answer: A**

Explanation:

Culture is the first element of the CALMR approach to DevOps in SAFe. It refers to the shared mindset and values that support successful DevOps adoption. Culture in SAFe is influenced by the Lean-Agile principles and practices that guide the entire framework. Culture in DevOps requires customer-centricity, collaboration, trust, empowerment, learning, and feedback among all the stakeholders involved in the value stream. Culture also fosters a shift-left mentality, where operational and quality concerns are addressed early and often in the development process. Culture is the foundation for the other elements of CALMR: automation, lean flow, measurement, and recovery<sup>1</sup>. One of the aspects of culture is to establish a work environment of shared responsibility, where everyone in the value stream is accountable for the quality and security of the solution, and for the outcomes delivered to the customer<sup>2</sup>. This means breaking down the silos and barriers between development, operations, security, and other teams, and creating a culture of mutual trust and respect<sup>3</sup>. Shared responsibility also means that everyone in the value stream has the authority and autonomy to make decisions and take actions that support the delivery of value, while following the guardrails and policies established by the enterprise<sup>4</sup>. ### NEW QUESTION # 107

Which statement is true about the PI Planning event?

- A. It involves everyone in the program over a two-day period
- B. It involves program Portfolio Management to prioritize the Stories presented by teams during the final plan review
- C. It involves Product Management and Product Owners on the first day and the rest of the teams on the second day
- D. It involves only the team members who are most qualified to estimate the work

**Answer: A**

Explanation:

The PI Planning event is a two-day event that brings together all the teams and stakeholders of an Agile Release Train (ART) to align on a common vision, mission, and goals for the upcoming Program Increment (PI). The PI Planning event involves everyone in the program, including the Business Owners, Product Management, System Architects, Agile teams, Scrum Masters, Product Owners, Release Train Engineers, and other relevant roles. The PI Planning event also fosters collaboration, communication, and commitment among the participants, and helps identify and address the risks and impediments that may affect the delivery of value. ### NEW QUESTION # 108

A User Story includes which three things? (Choose three.)

- A. What
- B. How
- C. Level of Risk
- D. Why
- E. Who
- F. Definition of Done

**Answer: A,D,E**

Explanation:

A user story is a short description of a small piece of desired functionality written from the user's perspective and in their language. A user story has three primary components, each of which begin with the letter 'C':

Card, Conversation, and Confirmation. The card is a written or digital note that captures the essence of the user story using the format: "As a (who), I want (what), so that (why)." The conversation is the ongoing dialogue between the team and the customer or product owner to elaborate and refine the user story details. The confirmation is the set of acceptance criteria and tests that verify the user story is done and meets the customer's expectations<sup>12</sup>. ### NEW QUESTION # 109

Velocity is

- A. business value delivered (monetary)
- B. average hours of work done by the team
- C. measurement for economic benefit
- D. the rate (in story points) at which the team delivers

**Answer: D**
