Professional-Cloud-Architect New Dumps & Sample Professional-Cloud-Architect Questions Answers

As this version is called software version or PC version, maybe many candidates may think our Professional-Cloud-Architect PC test engine may just be used on personal computers. At first, it can be only used on PC. But with our IT staff's improvement, now our Google Professional-Cloud-Architect PC test engine can be installed on all electronic products. You can copy to your mobile, Ipad or others. No matter anywhere or any time you want to learn Professional-Cloud-Architect PC test engine, it is convenient for you. For busy workers, you can make the best of your time on railway or bus, mastering one question and answers every time will be great.

Google Professional-Cloud-Architect certification exam tests candidates on their ability to design and plan cloud solution architectures, manage and provision the infrastructure, ensure security and compliance, optimize performance and scalability, and troubleshoot and resolve issues. Professional-Cloud-Architect Exam covers a range of topics such as cloud architecture, infrastructure, security, data storage, networking, and application development.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q82-Q87):

NEW QUESTION # 82

Your customer is moving an existing corporate application to Google Cloud Platform from an on- premises data center. The business owners require minimal user disruption. There are strict security team requirements for storing passwords. What authentication strategy should they use?

- A. Ask users to set their Google password to match their corporate password.
- B. Use G Suite Password Sync to replicate passwords into Google.
- C. Federate authentication via SAML 2.0 to the existing Identity Provider.
- **D. Provision users in Google using the Google Cloud Directory Sync tool.**

Answer: D

Explanation:

<https://support.google.com/a/answer/2611859?hl=en>

NEW QUESTION # 83

To reduce costs, the Director of Engineering has required all developers to move their development infrastructure resources from on-premises virtual machines (VMs) to Google Cloud Platform. These resources go through multiple start/stop events during the day and require state to persist. You have been asked to design the process of running a development environment in Google Cloud while providing cost visibility to the finance department. Which two steps should you take? Choose 2 answers

- **A. Use Google BigQuery billing export and labels to associate cost to groups.**
- B. Apply VM CPU utilization label and include it in the BigQuery billing export.
- C. Store all state in Google Cloud Storage, snapshot the persistent disks, and terminate the VM.
- D. Use the -auto-delete flag on all persistent disks and terminate the VM.
- E. Store all state into local SSD, snapshot the persistent disks, and terminate the VM.
- **F. Use the --no-auto-delete flag on all persistent disks and stop the VM.**

Answer: A,F

NEW QUESTION # 84

For this question, refer to the Mountkirk Games case study. Mountkirk Games wants to migrate from their current analytics and statistics reporting model to one that meets their technical requirements on Google Cloud Platform.

Which two steps should be part of their migration plan? (Choose two.)

- A. Draw an architecture diagram that shows how to move from a single MySQL database to a MySQL cluster.
- B. Load 10 TB of analytics data from a previous game into a Cloud SQL instance, and run test queries against the full dataset to confirm that they complete successfully.
- **C. Write a schema migration plan to denormalize data for better performance in BigQuery.**
- **D. Evaluate the impact of migrating their current batch ETL code to Cloud Dataflow.**
- E. Integrate Cloud Armor to defend against possible SQL injection attacks in analytics files uploaded to Cloud Storage.

Answer: C,D

NEW QUESTION # 85

You are responsible for the Google Cloud environment in your company. Multiple departments need access to their own projects, and the members within each department will have the same project responsibilities. You want to structure your Google Cloud environment for minimal maintenance and maximum overview of IAM permissions as each department's projects start and end. You want to follow Google-recommended practices. What should you do?

- A. Create a folder per department and grant the respective members of the department the required IAM permissions at the folder level.
Structure all projects for each department under the respective folders.
- B. Grant all department members the required IAM permissions for their respective projects.
- **C. Create a Google Group per department and add all department members to their respective groups.
Create a folder per department and grant the respective group the required IAM permissions at the folder level.
Add the projects under the respective folders.**
- D. Create a Google Group per department and add all department members to their respective groups.

Grant each group the required IAM permissions for their respective projects.

Answer: C

Explanation:

<https://cloud.google.com/resource-manager/docs/access-control-folders#best-practices-folders-iam> Use groups whenever possible to manage principals.

<https://cloud.google.com/resource-manager/docs/creating-managing-folders> A folder can contain projects, other folders, or a combination of both. Organizations can use folders to group projects under the organization node in a hierarchy. For example, your organization might contain multiple departments, each with its own set of Google Cloud resources. Folders allow you to group these resources on a per-department basis.

NEW QUESTION # 86

For this question, refer to the Dress4Win case study.

Dress4Win would like to become familiar with deploying applications to the cloud by successfully deploying some applications quickly, as is. They have asked for your recommendation. What should you advise?

- A. Identify self-contained applications with external dependencies as a first move to the cloud.
- B. Recommend moving their message queuing servers to the cloud and continue handling requests to on-premise applications.
- C. Identify enterprise applications with internal dependencies and recommend these as a first move to the cloud.
- D. Suggest moving their in-house databases to the cloud and continue serving requests to on-premise applications.

Answer: D

NEW QUESTION # 87
