#### NEW QUESTION # 57

Which two methods can you use to send notifications when an event occurs that matches a configured event handler? (Choose two.)

- A. Send SNMP trap
- B. Send Alert through FortiSIEM MEA
- C. Send SMS notification
- D. Send Alert through Fabric Connectors

**Answer: A,C**

Explanation:

In FortiAnalyzer, event handlers can be configured to trigger specific notifications when an event matches defined criteria. These notifications are designed to alert administrators in real time about critical events.

Option B - Send SNMP Trap:

FortiAnalyzer supports sending SNMP traps as one of the notification methods when an event matches an event handler. This allows integration with SNMP-enabled network management systems, which can then trigger further alerts or actions based on the trap received.

Conclusion: Correct.

Option C - Send SMS Notification:

FortiAnalyzer also supports SMS notifications, enabling alerts to be sent via SMS to predefined recipients. This method is useful for administrators who require immediate alerts but may not have access to email or other notification systems at all times.

Conclusion: Correct.

Option A - Send Alert through Fabric Connectors:

While Fabric Connectors allow FortiAnalyzer to interact with other parts of the Security Fabric, they are primarily used for data sharing and automation rather than directly for sending alerts or notifications.

Conclusion: Incorrect.

Option D - Send Alert through FortiSIEM MEA:

FortiSIEM integration allows for data sharing and further analysis within the Fortinet ecosystem, but it does not directly act as a notification method from FortiAnalyzer itself.

Conclusion: Incorrect.

Conclusion:

Correct Answer : B. Send SNMP trap and C. Send SMS notification

These options represent valid notification methods for FortiAnalyzer's event handler configuration.
