Exam4Tests has a professional team of IT experts and certified trainers who written the C-SEC-2405 exam questions and valid exam prep according to the actual test. You can download the SAP free demo before you purchase. If you bought our C-SEC-2405 Exam PDF, you will be allowed to free update your dumps one-year. You just need to spend one or two days to practice questions and remember answers.

SAP Certified Associate - Security Administrator Sample Questions (Q26-Q31):

NEW QUESTION # 26

An authorization based on what object is required for trusted system access to an SAP Fiori back-end server?

- A. S_SERVICE
- B. S_RFC
- C. S_START
- D. S_RFCACL

Answer: D

Explanation:

The S_RFCACL authorization object is essential for trusted system access to an SAP Fiori back-end server. It controls Remote Function Call (RFC) access by verifying trust relationships and ensuring secure communication between systems.

Key Fields in S_RFCACL:

- * ACTVT: Specifies the activity, such as execution or maintenance of RFC connections.
- * RFC_SYSID: Identifies the trusted system by its System ID (SID).
- * RFC_CLIENT: Specifies the client number in the trusted system

SAP Security References:

NEW QUESTION # 27

To connect to data sources that are NOT all based on OData, which of the following options does SAP recommend you use?

- A. Cloud connector
- B. OData Provisioning service
- C. SAP Integration Suite
- D. SAP Process Integration

Answer: C

Explanation:

The SAP Integration Suite is recommended for connecting to data sources that are not solely based on OData.

It provides:

- * Support for Multiple Protocols:
- * Integrates with SOAP, REST, OData, and non-OData-based services.
- * Prebuilt Content:
- * Includes prebuilt integration flows to connect with a variety of systems and applications.
- * Scalability and Flexibility:
- * Designed for hybrid landscapes, supporting both cloud and on-premise systems.

SAP Security References:

- * SAP Integration Suite Overview
- * SAP Help Portal: Multi-Protocol Integration with SAP Integration Suite

NEW QUESTION # 28

Which authorization objects can be used to restrict access to SAP Enterprise Search models in the SAP Fiori launchpad? Note: There are 2 correct answers to this question.

- A. S_ESH_CONN
- B. S_ESH_ADMIN
- C. SDDLVIEW
- D. RSDDLTI

Answer: A,C

Explanation:

To restrict access to SAP Enterprise Search models in the SAP Fiori launchpad, the authorization objects SDDLVIEW and S_ESH_CONN are used. SDDLVIEW controls access to data definition language (DDL) views, which are often underlying components of search models, ensuring that only authorized users can access or execute these views within the Fiori environment. S_ESH_CONN governs access to enterprise search connectors, which link search models to the Fiori launchpad, allowing administrators to restrict which users can utilize specific search functionalities. These objects provide granular control over search model access, aligning with security and segregation of duties requirements. S_ESH_ADMIN is used for administrative tasks related to enterprise search, not direct model access, and RSDDLTI is not a standard SAP authorization object. By leveraging SDDLVIEW and S_ESH_CONN, SAP ensures that search capabilities in the Fiori launchpad are securely managed, preventing unauthorized access to sensitive data while enabling efficient search functionality for authorized users.

NEW QUESTION # 29

SAP BTP distinguishes between which of the following users? Note: There are 2 correct answers to this question.

- A. Key users
- B. Business users
- C. Technical users
- D. Platform users

Answer: C,D

Explanation:

* Context:SAP BTP categorizes users based on their roles and functionalities within the system

* Solution Descriptions:

* Technical users: System-to-system interaction and automation.

* Platform users: Direct interaction with SAP BTP services for development, management, or operational purposes.

SAP Security References:

* SAP BTP User Management Guide

* SAP Help Portal for BTP User Roles and Permissions

NEW QUESTION # 30

An authorization based on what object is required for trusted system access to an SAP Fiori back-end server?

- A. S_SERVICE
- B. S_RFC
- C. S_START
- D. S_RFCACL

Answer: D

Explanation:

For trusted system access to an SAP Fiori back-end server, the authorization object S_RFCACL is required.

S_RFCACL (RFC Authorization for Trusted Systems) controls access in trusted RFC (Remote Function Call) connections, which are used to establish secure communication between the Fiori front-end server and the back-end server. This object ensures that only authorized systems or users can execute RFC calls in a trusted relationship, verifying the calling system's identity and the user's permissions. It is critical for securing Fiori app access, as these apps rely on RFC connections to retrieve data from the back-end. S_START is used for starting Fiori apps, S_SERVICE governs OData service access, and S_RFC controls general RFC access but lacks the trusted system specificity of S_RFCACL. By requiring S_RFCACL, SAP ensures that trusted connections are tightly

controlled, preventing unauthorized access and maintaining the integrity of Fiori back-end interactions in SAP S/4HANA systems.

NEW QUESTION # 31

If you want to improve your career prospects, obtaining SAP Certified Associate - Security Administrator, C-SEC-2405 exam certificate is a great way for you. SAP Certified Associate - Security Administrator certificate will help you land a job in the industry. After passing the SAP Certified Associate - Security Administrator you can increase your earning potential. This is because employers are ready to pay more for candidates who have passed the SAP C-SEC-2405 Certification test. Success in the C-SEC-2405 exam can impact your promotion. If you are already an employee you can promote yourself to the highest level after passing the SAP C-SEC-2405 test.
