NEW QUESTION # 120
What is the minimum amount of RAM required for setting up log collection in hybrid cloud observability?

- A. 4 GB
- B. 32 GB
- C. GB
- D. 16 GB

Answer: D

NEW QUESTION # 121
The web console is showing the status of a network router as "down", however the node is up and running.
Which two of the following causes could be creating the issue? (Choose two.)

- A. router is configured as a parent in a node dependency
- B. agent connection status with the polling engine is "down"
- C. ICMP is blocked between the device and the polling engine
- D. SNMP is blocked between the device and the polling engine

Answer: C,D

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
If the web console shows a router as "down" but it is actually operational:
ICMP is blocked: If the polling engine cannot ping the device, it will be reported as down.
SNMP is blocked: If SNMP polling fails (for devices polled via SNMP), detailed data and status cannot be retrieved, resulting in a down state.
Agent connection issues may apply for agent-based monitoring but are not typical for network routers. Node dependency configuration could affect child node status display but would not cause the parent node to show
"down".
