Free PDF 2026 Google Professional-Cloud-Developer–The Best Valid Study Plan

BONUS!!! Download part of Real4dumps Professional-Cloud-Developer dumps for free: https://drive.google.com/open?id=1JEqlZEA1GvlxcOb07q99jXaB9PsJoP2-

Our Professional-Cloud-Developer cram materials will help you gain the success in your career. You can be respected and enjoy the great fame among the industry. When applying for the jobs your resumes will be browsed for many times and paid high attention to. The odds to succeed in the job interview will increase. So you could see the detailed information of our Professional-Cloud-Developer Exam Questions before you decide to buy them on our web. Also we have free demo of our Professional-Cloud-Developer exam questions for you to try before you make the purchase.

Google Professional-Cloud-Developer is a certification exam designed to validate the skills and knowledge of cloud developers who use Google Cloud technologies. Professional-Cloud-Developer exam is intended for developers who have experience in building and deploying applications on Google Cloud Platform (GCP) using various programming languages and tools. Professional-Cloud-Developer exam tests candidates on their ability to design, develop, and deploy highly scalable and reliable cloud applications using GCP.

Earning the Google Professional-Cloud-Developer Certification can provide developers with a number of benefits. For example, it can help them demonstrate their proficiency in cloud technologies to potential employers, which can lead to better job opportunities and higher salaries. Additionally, the certification can help developers stay up-to-date with the latest cloud technologies and best practices, which can help them build more innovative and effective cloud applications.

Printable Professional-Cloud-Developer PDF | New Professional-Cloud-Developer Test Review

The Real4dumps aids students in passing the test on their first try by giving them the real questions in three formats, 24/7 support team assistance, free demo, up to 1 year of free updates, and the satisfaction guarantee. As a result of its persistent efforts in providing candidates with actual Professional-Cloud-Developer Exam Questions, Real4dumps has become one of the best platforms to prepare for the Google Professional-Cloud-Developer exam successfully. One must prepare with Real4dumps exam questions if one wishes to pass the Professional-Cloud-Developer exam on their first attempt.

Google Certified Professional - Cloud Developer Sample Questions (Q104-Q109):

NEW QUESTION # 104

You are developing a web application that will be deployed to production on Cloud Run. The application consists of multiple microservices, some of which will be publicly accessible and others that will only be accessible after authentication by Google identities. You need to ensure that only authenticated users can access the restricted services, while allowing unrestricted access to the public services of the application. You want to use the most secure approach while minimizing management overhead and complexity. How should you configure access?

- A. Use Cloud Endpoints with Firebase Authentication for all microservices. Configure Firebase rules to manage access control lists (ACLs) for each service, allowing access to the public services.
- B. Enable Identity-Aware Proxy (IAP) for all microservices. Develop a new microservice that checks the authentication requirements for each application and controls access to the respective services.
- C. Configure separate Cloud Run services for the public and restricted microservices. Enable Identity-Aware Proxy (IAP) only for the restricted services, and configure the Cloud Run ingress settings to 'Internal and Cloud Load Balancing'.
- D. Enable Identity-Aware Proxy (IAP) for all microservices. Manage access control lists (ACLs) for the restricted services, and configure allAuthenticatedUsers access to the public services.

Answer: C

Explanation:

NEW QUESTION # 105

Your existing application keeps user state information in a single MySQL database. This state information is very user-specific and depends heavily on how long a user has been using an application. The MySQL database is causing challenges to maintain and enhance the schema for various users.
Which storage option should you choose?

- A. Cloud SQL
- B. Cloud Storage
- C. Cloud Datastore/Firestore
- D. Cloud Spanner

Answer: A

NEW QUESTION # 106

You are developing an HTTP API hosted on a Compute Engine virtual machine instance that needs to be invoked by multiple clients within the same Virtual Private Cloud (VPC). You want clients to be able to get the IP address of the service.
What should you do?

- A. Ensure that clients use Compute Engine internal DNS by connecting to the instance name with the url https://[INSTANCE_NAME].[ZONE].c.[PROJECT_ID].internal/.
- B. Reserve a static external IP address and assign it to an HTTP(S) load balancing service's forwarding rule. Clients should use this IP address to connect to the service.
- C. Reserve a static external IP address and assign it to an HTTP(S) load balancing service's forwarding rule. Then, define an A record in Cloud DNS. Clients should use the name of the A record to connect to the service.
- D. Ensure that clients use Compute Engine internal DNS by connecting to the instance name with the url https://[API_NAME]/[API_VERSION]/.

Answer: D

NEW QUESTION # 107

Your company plans to expand their analytics use cases. One of the new use cases requires your data analysts to analyze events using SQL on a near real-time basis. You expect rapid growth and want to use managed services as much as possible. What should you do?

- A. Create a Cloud Pub/Sub topic and a subscription. Stream your events from the source into the Pub/Sub topic. Leverage Cloud Dataflow to ingest these events into Cloud Storage.
- B. Create a Cloud Pub/Sub topic and a subscription. Stream your events from the source into the Pub/Sub topic. Leverage Cloud Dataflow to ingest these events into BigQuery.
- C. Create a Cloud Pub/Sub topic and a subscription. Stream your events from the source into the Pub/Sub topic. Leverage Cloud Dataflow to ingest these events into Cloud Datastore.
- D. Create a Kafka instance on a large Compute Engine instance. Stream your events from the source into a Kafka pipeline. Leverage Cloud Dataflow to ingest these events into Cloud Storage.

Answer: B

Explanation:
A is not correct because this solution doesn't provide a fully managed solution.
B is not correct because Cloud Storage is not ideal for inserting individual events and analyzing them via SQL.
C is correct because all three products involved can scale to significant volumes, and writing the data to BigQuery allows for immediate analysis via SQL.
D Is not correct because Cloud Datastore is not ideal for inserting individual events and analyzing them.

NEW QUESTION # 108
You have an HTTP Cloud Function that is called via POST. Each submission's request body has a flat, unnested JSON structure containing numeric and text data. After the Cloud Function completes, the collected data should be immediately available for ongoing and complex analytics by many users in parallel. How should you persist the submissions?

- A. Directly persist each POST request's JSON data into Datastore.
- B. Transform the POST request's JSON data, and store it in a regional Cloud SQL cluster.
- C. Persist each POST request's JSON data as an individual file within Cloud Storage, with the file name containing the request identifier.
- D. Transform the POST request's JSON data, and stream it into BigQuery.

Answer: D
