

Pass Guaranteed Accurate Palo Alto Networks - NetSec-Pro - Palo Alto Networks Network Security Professional Valid Exam Cost

P.S. Free & New NetSec-Pro dumps are available on Google Drive shared by Prep4away: <https://drive.google.com/open?id=11O9TX4e6qhDzP5cj2H0IMkpibeEvytgz>

Our NetSec-Pro valid study guide is edited by out IT professional experts and focus on providing you with the most updated study material for all of you. You will pass your NetSec-Pro actual test in your first attempt. With the help of Palo Alto Networks NetSec-Pro Current Exam Content, you will be more confident and positive to face your coming test. After you get your NetSec-Pro certification, you will be getting close to your dream.

Palo Alto Networks NetSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	• Network Security Fundamentals: This section of the exam measures skills of network security engineers and covers key concepts such as application layer inspection for Strata and SASE products, differentiating between slow and fast path packet inspection, and the use of decryption methods including SSL Forward Proxy, SSL Inbound Inspection, SSH Proxy, and scenarios where no decryption is applied. It also includes applying network hardening techniques like Content-ID, Zero Trust principles, User-ID (including Cloud Identity Engine), Device-ID, and network zoning to enhance security on Strata and SASE platforms.
Topic 2	• Platform Solutions, Services, and Tools: This section measures the expertise of security engineers and platform administrators in Palo Alto Networks NGFW and Prisma SASE products. It involves creating security and NAT policies, configuring Cloud-Delivered Security Services (CDSS) such as security profiles, User-ID and App-ID, decryption, and monitoring. It also covers the application of CDSS for IoT security, Enterprise Data Loss Prevention, SaaS Security, SD-WAN, GlobalProtect, Advanced WildFire, Threat Prevention, URL Filtering, and DNS security. Furthermore, it includes aligning AIOps with best practices through administration, dashboards, and Best Practice Assessments.
Topic 3	• Infrastructure Management and CDSS: This section tests the abilities of security operations specialists and infrastructure managers in maintaining and configuring Cloud-Delivered Security Services (CDSS) including security policies, profiles, and updates. It includes managing IoT security with device IDs and monitoring, as well as Enterprise Data Loss Prevention and SaaS Security focusing on data encryption, access control, and logging. It also covers maintenance and configuration of Strata Cloud Manager and Panorama for network security environments including supported products, device addition, reporting, and configuration management.

Topic 4	• GFW and SASE Solution Maintenance and Configuration: This domain evaluates the skills of network security administrators in maintaining and configuring Palo Alto Networks hardware firewalls, VM-Series, CN-Series, and Cloud NGFWs. It includes managing security policies, profiles, updates, and upgrades. It also covers adding, configuring, and maintaining Prisma SD-WAN including initial setup, pathing, monitoring, and logging. Maintaining and configuring Prisma Access with security policies, profiles, updates, upgrades, and monitoring is also assessed.
Topic 5	• NGFW and SASE Solution Functionality: This part assesses the knowledge of firewall administrators and network architects on the functions of various Palo Alto Networks firewalls including Cloud NGFWs, PA-Series, CN-Series, and VM-Series. It covers perimeter and core security, zone security and segmentation, high availability, security and NAT policy implementation, as well as monitoring and logging. Additionally, it includes the functionality of Prisma SD-WAN with WAN optimization, path and NAT policies, zone-based firewall, and monitoring, plus Prisma Access features such as remote user and network configuration, application access, policy enforcement, and logging. It also evaluates options for managing Strata and SASE solutions through Panorama and Strata Cloud Manager.

HOT NetSec-Pro Valid Exam Cost - Trustable Palo Alto Networks Palo Alto Networks Network Security Professional - New NetSec-Pro Test Vce Free

In the era of informational globalization, the world has witnessed climax of science and technology development, and has enjoyed the prosperity of various scientific blooms. In 21st century, every country had entered the period of talent competition, therefore, we must begin to extend our NetSec-Pro personal skills, only by this can we become the pioneer among our competitors. At the same time, our competitors are trying to capture every opportunity and get a satisfying job. In this case, we need a professional NetSec-Pro Certification, which will help us stand out of the crowd and knock out the door of great company.

Palo Alto Networks Network Security Professional Sample Questions (Q68-Q73):

NEW QUESTION # 68

After a firewall is associated with Strata Cloud Manager (SCM), which two additional actions are required to enable management of the firewall from SCM? (Choose two.)

- A. Install a device certificate.
- B. Configure a Security policy allowing "stratacloudmanager.paloaltonetworks.com" for all users.
- C. Deploy a service connection for each branch site and connect with SCM.
- D. Configure NTP and DNS servers for the firewall.

Answer: A,D

Explanation:

To fully manage a firewall from Strata Cloud Manager (SCM), it's essential to establish trust and ensure reliable connectivity:

Configure NTP and DNS servers

The firewall must have accurate time (NTP) and name resolution (DNS) to securely communicate with SCM and related cloud services.

"To ensure successful management, configure the firewall's NTP and DNS settings to synchronize time and resolve domain names such as stratacloudmanager.paloaltonetworks.com" (Source: SCM Onboarding Requirements) Install a device certificate A device certificate authenticates the firewall's identity when connecting to SCM.

"The device certificate authenticates the firewall to Palo Alto Networks cloud services, including SCM. It's a fundamental requirement to establish secure connectivity." (Source: Device Certificates) These steps ensure trust, secure communication, and successful onboarding into SCM.

NEW QUESTION # 69

Which CDSS service mitigates phishing threats?

- **A. URL Filtering**
- B. IoT Security
- C. Enterprise DLP
- D. SD-WAN

Answer: A

Explanation:

URL Filtering and Advanced URL Filtering protect users from malicious and phishing websites by categorizing URLs and blocking dangerous destinations.

Reference: <https://docs.paloaltonetworks.com/advanced-url-filtering/>

NEW QUESTION # 70

A network security engineer wants to forward Strata Logging Service data to tools used by the Security Operations Center (SOC) for further investigation. In which best practice step of Palo Alto Networks Zero Trust does this fit?

- A. Map and Verify Transactions
- B. Standards and Designs
- **C. Report and Maintenance**
- D. Implementation

Answer: C

Explanation:

The "Report and Maintenance" step of the Zero Trust model emphasizes ongoing monitoring, analysis, and reporting to ensure the environment remains secure over time.

"The Report and Maintenance phase includes continuous monitoring, log forwarding, and sharing of security telemetry to third-party tools to maintain and validate Zero Trust implementation." (Source: Zero Trust Best Practices) By forwarding logs to SOC tools, the engineer ensures comprehensive visibility and proactive threat hunting.

NEW QUESTION # 71

A primary firewall in a high availability (HA) pair is experiencing a current failover issue with ICMP pings to a secondary device. Which metric should be reviewed for proper ICMP pings between the firewall pair?

- A. Link monitoring
- **B. Heartbeat polling**
- C. Bidirectional Forwarding Detection (BFD)
- D. Non-functional state

Answer: B

Explanation:

Heartbeat polling is a core HA function to monitor connectivity between HA peers, leveraging ICMP pings to determine link health and availability.

Heartbeat Polling uses ICMP pings to verify the connectivity and health of the HA peers. If heartbeat polling fails, the firewall considers the peer to be down and may initiate failover.

If ICMP pings fail, checking heartbeat polling logs helps identify if link or path monitoring triggers the failover.

NEW QUESTION # 72

Which GlobalProtect configuration is recommended for granular security enforcement of remote user device posture?

- **A. Configuring host information profile (HIP) checks for all mobile users**
- B. Applying log at session end to all GlobalProtect Security policies
- C. Implementing multi-factor authentication (MFA) for all users attempting to access internal applications
- D. Configuring a rule that blocks the ability of users to disable GlobalProtect while accessing internal applications

Answer: A

Explanation:

Host Information Profile (HIP) checks are used in GlobalProtect to collect and evaluate endpoint posture (OS, patch level, AV status) to enforce granular security policies for remote users.

The HIP feature collects information about the host and can be used in security policies to enforce posture-based access control. This ensures only compliant endpoints can access sensitive resources.

This enables fine-grained, context-aware access decisions beyond user identity alone.

NEW QUESTION # 73

.....

The Palo Alto Networks Network Security Professional (NetSec-Pro) questions are in use by many customers currently, and they are preparing for their best future daily. Even the students who used it in the past to prepare for the Palo Alto Networks NetSec-Pro Certification Exam have rated our practice questions as one of the best. You will receive updates till 365 days after your purchase, and there is a 24/7 support system that assists you whenever you are stuck in any problem or issues.
