Why do we need so many certifications? One thing has to admit, more and more certifications you own, it may bring you more opportunities to obtain a better job, earn more salary. This is the reason why we need to recognize the importance of getting the test TDA-C01 certification. Therefore, our TDA-C01 Study Tool can help users pass the qualifying examinations that they are required to participate in faster and more efficiently as our TDA-C01 exam questions have a pass rate of more than 98%. Just buy our TDA-C01 practice guide, then you will pass your TDA-C01 exam.

Tableau TDA-C01 Exam is a computer-based test that consists of multiple-choice questions, hands-on exercises, and scenario-based questions. TDA-C01 exam is divided into two parts: the first part covers fundamental concepts of Tableau, such as data connection, data blending, and basic calculations. The second part covers more advanced concepts, such as table calculations, LOD expressions, and advanced data modeling. To pass the exam, candidates must demonstrate proficiency in both fundamental and advanced Tableau concepts.

**The Best TDA-C01 Pdf Files | Realistic TDA-C01 Actual Exams and New Real Tableau Certified Data Analyst Testing Environment**

To pass the hard Tableau Certified Data Analyst TDA-C01 exam on the first try, you must invest more time, effort, and money. To pass the Tableau Certified Data Analyst TDA-C01 Exam, you must have the right TDA-C01 Exam Dumps, which are quite hard to get online. Get it right away to begin preparing. The following file types are available: Tableau Certified Data Analyst TDA-C01 Dumps PDF file, and Practice test software for TDA-C01 and web-based practise test software for Tableau Certified Data Analyst TDA-C01 Exams. All these three formats consist of Tableau Certified Data Analyst TDA-C01 Actual Questions that are not only helpful for the preparation but also provide useful information about the Tableau Certified Data Analyst TDA-C01 Valid Dumps certification preparation.

Tableau TDA-C01 Certification Exam is a highly respected credential in the field of data analytics, and it is recognized by many organizations globally. Tableau Certified Data Analyst certification program offers a great opportunity for professionals to enhance their knowledge and skills in using Tableau for data analytics, and gain a competitive edge in the job market. By obtaining this certification, individuals can demonstrate to potential employers their competence in using Tableau software for data analysis and reporting, and increase their chances of advancing their careers in the field of data analytics.

## Tableau Certified Data Analyst Sample Questions (Q48-Q53):

### NEW QUESTION # 48

You have the following:

Overall Rank and Rank are calculated fields that use the RANK function.

You filter out the sub-category where [Overall Rank] - 1.

For which three the sub-categories will the value of Rank change? Choose three.

- A. Bookcases
- B. Tables
- C. Copiers
- D. Machines  
G Phones
- E. Accessories
- F. Furnishings
- G. Chairs

**Answer: B,D,E**

Explanation:

In Tableau, the RANK function assigns a rank to each row within a partition of the data, based on the value of the field being ranked. It is important to understand that the rank is recalculated whenever the underlying data or the partitioning changes.

In the given scenario, the Overall Rank is based on the Sales figures, while the Rank (presumably) is based on the Sales within the Category. When filtering on the condition where [Overall Rank] - 1, it means we are excluding the sub-category that has an Overall Rank of 2.

Looking at the data:

Furnishings has an Overall Rank of 8, which does not meet the filter condition ([Overall Rank] - 1). Therefore, its rank remains the same.

Tables have an Overall Rank of 3. When the sub-category with an Overall Rank of 2 is removed (Chairs in this case), Tables move up in the overall ranking. However, since Tables are the top-ranked within the Furniture category, their Rank within the category would remain unchanged at 1.

Chairs have an Overall Rank of 2, which meets the filter condition and thus will be removed from the view. We cannot determine the change in Rank for Chairs because they are filtered out.

Accessories have an Overall Rank of 5. If any sub-category with a higher Overall Rank (1 to 4) is removed, the rank of Accessories within the Technology category could change because it is currently ranked 3 in its category. With the removal of Phones (Overall Rank 1), the Rank of Accessories could potentially increase.

Copiers have an Overall Rank of 6, which does not meet the filter condition. Therefore, its rank remains the same.

Machines have an Overall Rank of 4. If we remove Phones (Overall Rank 1), Machines will move up in the overall ranking and potentially within the Technology category as well, changing its Rank from 2 to 1.

Phones have an Overall Rank of 1, which does not meet the filter condition of being Overall Rank 2. Therefore, its rank remains the same.

Bookcases have an Overall Rank of 7, which does not meet the filter condition. Therefore, its rank remains the same.

Based on this analysis, when the sub-category with an Overall Rank of 2 (Chairs) is removed, the Rank value will change for Tables, Accessories, and Machines, as they will move up in the overall ranking within their respective categories. However, it's important to note that while Tables will move up in the overall ranking, their rank within the Furniture category would not change as they are already at the top. The rank changes for Accessories and Machines are due to the removal of Phones, which is ranked higher overall and within the Technology category.

### NEW QUESTION # 49

You have a Tableau workbook that contains three worksheets named Sheet1, Sheet2, and Sheet3. You create several filters.

From the Data Source page, you plan to add data source filters.

What type of filter will appear in the Edit Data Source Filters dialog box?

- A. A table calculation filter used on Sheet
- **B. A dimension filter on all the sheets**
- C. A context filter on a dimension in Sheet3
- D. A top N condition filter on a dimension in Sheet 1 and Sheet2

**Answer: B**

Explanation:

A data source filter is a filter that applies to all the worksheets that use the same data source. It filters the data before any other filters or calculations are applied. You can add a data source filter from the Data Source page by clicking on the Add button next to Filters.

The type of filter that will appear in the Edit Data Source Filters dialog box is a dimension filter on all the sheets. This means that you can choose a dimension from your data source and filter it by values, range, condition, or top/bottom. The filter will affect all the worksheets that use that dimension.

The other types of filters are not data source filters and will not appear in the Edit Data Source Filters dialog box. A table calculation filter is a filter that applies to a table calculation, such as percent of total or running total. A top N condition filter is a filter that shows only the top or bottom N values of a measure or dimension based on a condition. A context filter is a filter that creates a subset of data that other filters can use.

References: [https://help.tableau.com/current/pro/desktop/en-us/filtering\\_datasource.htm](https://help.tableau.com/current/pro/desktop/en-us/filtering_datasource.htm) <https://help.tableau.com/current/pro/desktop/en-us/filtering.htm> [https://help.tableau.com/current/pro/desktop/en-us/filtering\\_tablecalculations.htm](https://help.tableau.com/current/pro/desktop/en-us/filtering_tablecalculations.htm) [https://help.tableau.com/current/pro/desktop/en-us/filtering\\_topn.htm](https://help.tableau.com/current/pro/desktop/en-us/filtering_topn.htm) [https://help.tableau.com/current/pro/desktop/en-us/filtering\\_context.htm](https://help.tableau.com/current/pro/desktop/en-us/filtering_context.htm)

Data source filters in Tableau apply to the entire data source, affecting all sheets that use that data source. The Edit Data Source Filters dialog box allows you to add filters that operate at the data source level, which is different from context filters, top N filters, or table calculation filters that are applied at the worksheet level.

### NEW QUESTION # 50

You have the following bar chart.

You want the chart to appear as shown in the Mowing exhibit.

What should you add?

- A. A distribution band
- B. A reference band
- C. An average line
- **D. A reference line**

**Answer: D**

Explanation:

A reference line is used in Tableau to display a line at a constant value or a computed value such as an average, median, minimum, or maximum in a bar chart. In this case, adding a reference line would allow you to show the median, upper quartile, and lower quartile, which corresponds to the changes shown in the bar chart.

### NEW QUESTION # 51

You have a line chart on a worksheet.

You want to add a comment to March 2020 as shown in the following visualization.

What should you do?

- **A. Annotate March 2020**
- B. Drag the growth rate to Text on the Marks card
- C. Enable captions
