We will soon upload our new version of our MB-500 guide braindumps into our official websites.

Microsoft MB-500 Exam is a valuable certification for Dynamics 365: Finance and Operations Apps Developers. It validates the candidate's knowledge and skills in developing and implementing business solutions using Dynamics 365: Finance and Operations. Passing the exam demonstrates that the candidate has the necessary expertise to design and develop new or existing business solutions, implement security and performance optimizations, develop integrations and extensions, and manage the lifecycle of business applications using Dynamics 365: Finance and Operations.

Microsoft Dynamics 365: Finance and Operations Apps Developer Sample Questions (Q199-Q204):

NEW QUESTION # 199

A company uses Dynamics 365 Commerce for sales and distribution operations.

The following reporting changes are required based on feedback from user acceptance testing:

* Add a field to a business document template.

* Adjust the location of the customer address on an SSRS report.

You need to implement the changes.

Which development tools should you use? To answer, drag the appropriate development tools to the correct requirements. Each development tool may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Development tools

- Power BI
- Visual Studio
- Microsoft 365

Answer Area

Requirement

- Add a new field.
- Adjust the customer address location.

Development tool

-
-

Answer:

Explanation:

Development tools

- Power BI
- Visual Studio
- Microsoft 365

Answer Area

Requirement

- Add a new field.
- Adjust the customer address location.

Development tool

- Microsoft 365
- Visual Studio

Explanation:

Development tools

- Power BI
- Visual Studio
- Microsoft 365

Answer Area

Requirement

- Add a new field.
- Adjust the customer address location.

Development tool

- Microsoft 365
- Visual Studio

NEW QUESTION # 200

You are a Dynamics 365 Finance and Operations developer.

You have the following code: (Line numbers are included for reference only.)

```
01 public void tryMethod(int a, int b)
02 {
03     try
04     {
05         info("One");
06         int c = a/b;
07         info("Two");
08     }
09     catch
10     {
11         info("Three");
12         if (a == 2)
13         {
14             return;
15         }
16         else if (a == 3)
17         {
18             b = 3;
19             retry;
20         }
21     }
22     finally
23     {
24         info("Four");
25     }
26     info("Five");
27 }
```

You need to evaluate the code.

What is the correct output for the method? To answer, select the appropriate option in the answer area.

NOTE: Each correct selection is worth one point.

Method	Output
tryMethod(5,2);	<div><div></div><div>One, Two, Four, Five</div><div>One, Two, Five</div><div>One, Three, Four, Five</div></div>
tryMethod(4,0);	<div><div></div><div>One, Three, Four, Five</div><div>One, Four, Five</div><div>One, Two, Four, Five</div></div>
tryMethod(2,0);	<div><div></div><div>One, Three, Four</div><div>One, Three</div><div>One, Three, Four, Five</div></div>
tryMethod(3,0);	<div><div></div><div>One, Two, Four, Five</div><div>One, Three, One, Two, Four, Five</div><div>One, Three, Four, One, Two, Four, Five</div></div>

Answer:

Explanation:

Method	Output
tryMethod(5,2);	<div><div></div><div>One, Two, Four, Five</div><div>One, Two, Five</div><div>One, Three, Four, Five</div></div>
tryMethod(4,0);	<div><div></div><div>One, Three, Four, Five</div><div>One, Four, Five</div><div>One, Two, Four, Five</div></div>
tryMethod(2,0);	<div><div></div><div>One, Three, Four</div><div>One, Three</div><div>One, Three, Four, Five</div></div>
tryMethod(3,0);	<div><div></div><div>One, Two, Four, Five</div><div>One, Three, One, Two, Four, Five</div><div>One, Three, Four, One, Two, Four, Five</div></div>

Explanation:

Box 1: One, Two, Four, Five

The statements in the finally clause are executed when control leaves the try block, either normally or through an exception.

Box 2: One, Three, Four, Five

Box 3: One, Three

Return ends the call.

Box 4: One, Three, One, Two, Four, Five

Retry restarts the try statement.

NEW QUESTION # 201

You are configuring your developer environment by using Team Explorer.

There are several developers working on a customization.

You need to ensure that all code is checked in and then merged to the appropriate branches.

In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Answer Area

Actions

Map the Microsoft Azure DevOps project to your local developer machine.
Create a test branch.
Create a dev branch.
Connect to the Microsoft Azure DevOps project.
Create a main branch.

Answer:

Explanation:

Actions	Answer Area
Map the Microsoft Azure DevOps project to your local developer machine.	Connect to the Microsoft Azure DevOps project.
Create a test branch.	Create a main branch.
Create a dev branch.	Create a dev branch.
Connect to the Microsoft Azure DevOps project.	Map the Microsoft Azure DevOps project to your local developer machine.
Create a main branch.	Create a test branch.

Explanation:

Connect to the Microsoft Azure DevOps project.

Create a main branch.

Create a dev branch.

Map the Microsoft Azure DevOps project to your local developer machine.

Create a test branch.

NEW QUESTION # 202

Developers at a company discover a bug in the production environment. You update the existing code in a development environment to resolve the bug.

You need to get the updated code to the production environment by using Azure DevOps.

Which five actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Steps to package code and upgrade the production environment

- ⋮ Generate a deployable package in Azure DevOps by using a build pipeline.
- ⋮ Build the solution in Visual Studio and create a deployable package with the generated DLLs for your model.
- ⋮ Develop the code and check it in to your version control system.
- ⋮ Schedule the production update with the release candidate version.
- ⋮ Apply the deployable package to a sandbox environment.
- ⋮ Mark the deployable package as a release candidate on the sandbox environment.

Answer Area

Answer:

Explanation:

Steps to package code and upgrade the production environment

- Generate a deployable package in Azure DevOps by using a build pipeline.
- Build the solution in Visual Studio and create a deployable package with the generated DLLs for your model.
- Develop the code and check it in to your version control system.
- Schedule the production update with the release candidate version.
- Apply the deployable package to a sandbox environment.
- Mark the deployable package as a release candidate on the sandbox environment.

Answer Area

- Develop the code and check it in to your version control system.
- Generate a deployable package in Azure DevOps by using a build pipeline.
- Apply the deployable package to a sandbox environment.
- Mark the deployable package as a release candidate on the sandbox environment.
- Schedule the production update with the release candidate version.

Explanation:

Develop the code and check it in to your version control system.

Generate a deployable package in Azure DevOps by using a build pipeline.

Apply the deployable package to a sandbox environment.

Mark the deployable package as a release candidate on the sandbox environment.

Schedule the production update with the release candidate version.

NEW QUESTION # 203

A company uses Dynamics 365 Finance. You are customizing elements for the extended data types (EDTs) shown in the following table.

EDT name	Comment
CalendarID	root EDT
CalendarName	root EDT
BasicCalendarID	derives from CalendarID

You have a table named WorkCalendar. The table has a column named BasicCalendarID that uses the BasicCalendarID EDT. You need to increase the length of the column by using an extension.

Solution: Create an extension for CalendarName.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B
