Sorgen Sie noch um die Prüfungsunterlagen der Microsoft MB-500? Jetzt brauchen Sie keine Sorgen! Weil uns zu finden bedeutet, dass Sie schon die Schlüssel zur Prüfungszertifizierung der Microsoft MB-500 gefunden haben. Wir Fast2test beschäftigen uns seit Jahren mit der Entwicklung der Software der IT-Zertifizierungsprüfung. Jetzt genießen wir einen guten Ruf weltweit. Wir bieten Ihnen die effektivsten Hilfe bei der Vorbereitung der Microsoft MB-500.

Microsoft MB-500 Exam Syllabus Topics:

Section	Weight	Objectives
Integrate and manage data solutions	15-20%	- Implement data management and data migration - Build and consume APIs and services - Manage data entities and data packages - Implement dual-write and data integration
Implement reporting and analytics	10-15%	- Create and modify reports using SSRS - Design and build workspaces and dashboards - Integrate with Power BI and analytical tools
Plan architecture and solution design	5-10%	- Plan application lifecycle management - Design data structure and data model - Determine solution requirements and constraints - Design technical architecture
Develop and test code	20-25%	- Implement event handlers and delegates - Perform unit testing and validation - Implement and extend workflows - Debug and troubleshoot code - Implement business logic using X++
Implement security and optimize performance	10-15%	- Optimize application performance - Configure and implement security roles and permissions - Implement Extensible Data Security policies - Monitor and diagnose performance issues

Apply developer tools	5-10%	- Use Visual Studio and development tools - Work with metadata and AOT - Use source control and version management - Use Lifecycle Services
Design and develop AOT elements	15-20%	- Design and create forms, menus, and user interface elements - Create and extend tables and data entities - Develop and modify views, queries, and indexes - Create and extend classes, methods, and enums

MB-500 Microsoft Dynamics 365: Finance and Operations Apps Developer neueste Studie Torrent & MB-500 tatsächliche prep Prüfung

Machen Sie sich noch Sorgen um die schwere Microsoft MB-500 Zertifizierungsprüfung? Keine Sorgen. Mit den Schulungsunterlagen zur Microsoft MB-500 Zertifizierungsprüfung von Fast2test ist jede IT-Zertifizierung einfacher geworden. Die Schulungsunterlagen zur Microsoft MB-500 Zertifizierungsprüfung von Fast2test sind der Vorläufer für die Microsoft MB-500 Zertifizierungsprüfung.

Microsoft Dynamics 365: Finance and Operations Apps Developer MB-500 Prüfungsfragen mit Lösungen (Q35-Q40):

35. Frage

You are a Dynamics 365 Finance developer. You have the following Extended Data Types (EDTs):

□ You plan to modify the properties of the Edits by using an extension.

You need to determine which operations can be performed.

Which operation is possible?

- A. Create an extension for AccountBase and increase the field size.
- B. Create a derived EDT for AccountId and increase the field size.
- C. Create an extension for AccountBase and decrease the field size.
- D. Create a derived EDT for AccountId and decrease the field size.

Antwort: A

36. Frage

A company has an extension that makes changes to a base form.

You need to identify all extension changes made to the base form.

What are two possible ways to achieve the goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. In the search bar on the base form, enter the text c:.
- B. In the search bar on the form extension element, enter the text c:.
- C. Right-click the base form and select view references
- D. In search bar on the form extension element, enter the text e:.
- E. In the search bar on the base form, enter the text e:.

Antwort: C,D

Begründung:

A: Customization and Extension

□ B: Example: Navigate to FMRental.Extension in the Tree Designer

1. In the Visual Studio, in Solution Explorer, in the FleetManagement Discounts project, expand User Interface > Form Extensions.

□ The FMRental.Extension element is an extension element that extends the functionality of the FMRental form by adding two new data sources and a new tab control.

2. In Solution Explorer, double-click FMRental.Extension to open the designer.

□

3. In the designer's search box, type 'e.' as shown in the image below. This filters the current designer to only show nodes that belong to the current extension.

<https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/extensibility/customize-model-elements-ex>

37. Frage

You need to modify the CashDisc form to meet the requirements.

Which objects should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Antwort:

Begründung:

Explanation:

Scenario: CashDisc form

You must extend the CashDisc form to add a new field named MinimumInvoiceAmount to the form. You must add a new Extended Data Type to the extension model for the new field. The new field must be added above the discount method field. The field must display 10 characters.

Box 1: extension

To add a new field to an existing table, you must first create a table extension.

Box 2: field

Box 3: field group

Box 4: data source

Often, the information that is stored in existing tables doesn't satisfy customer requirements. Therefore, additional tables must be created, and data from those tables must be shown on pages.

You can add new data sources to existing forms through extension. Follow these steps.

In the extension model, create a form extension for the selected form.

Right-click the form extension, and then select New Data Source.

Topic 2, World Wide Importers

This is a case study Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment and problem statements. When you are ready to answer a question, click the Question button to return to the question.

Background

Wide World Importers sell office supplies, furniture, and fittings to their customers across the United States.

The company has the following locations:

- * a retail store in Seattle

- * a warehouse in Seattle

- * a customer support and call center in Atlanta

- * a team of field workers that provide furniture installation services at customer sites

Wide World Importers plans to implement Dynamics 365 Finance and Microsoft Azure cloud platform features.

Current environment

Requirements

Customers may place orders by email, phone, or by using the company's website. The company authorizes and processes credit card transactions by using a web-based application. Customer, inventory, supplier, and other master and transactional data is stored in a legacy database.

The company collects feedback from customers by phone or a form on the company's website and maintains the data in a Microsoft Excel workbook.

Wide World Importers runs on-premises applications to manage payroll and workers compensation. The company has a set of

Microsoft Power BI dashboards that present data from a reporting database.

The company creates a Lifecycle Services (LCS) implementation project and completes Dynamics 365 Finance onboarding.

The company maintains production, quality assurance (QA), development, user acceptance testing (UAT), and build environments.

General

- * You must configure a cloud-based Dynamics 365 Finance development environment and enable code extensions that support updates.

- * You must configure version control and a Build environment.

- * You must migrate all legacy data to the new system.

- * You must implement best practices for X++ coding, the data model, caching, and security.

- * All new code must be unit tested in a development environment and then validated by the QA team before code is added to source control.

Business processes

- * You must configure vendor trade agreements.

- * Products must be shipped directly from suppliers to customers depending on customer location to save indirect costs.

- * You must collect customer feedback on products shipped directly from vendors.

- * You must deploy code to a UAT environment for testing before deploying code to production.

- * You must validate all entries for the purchase order creation form.

- * You must develop a web portal that allows customers to browse products, place orders, and check order status. Product data for the web portal must be integrated as periodic batches.

Business systems

- * You must install and configure a third-party solution for credit card processing within Dynamics 365 Finance. The third-party company will provide a deployable package.

- * The workers compensation application must be able to call an API to update worker compensation details in Dynamics 365 Finance.

- * You must develop a process to import payroll journals into the system.

- * You must configure the warehouse mobile device portal for warehouse operations.

- * You must install a third-party solution to support web portal integration. The solution is supplied as a source code model file.

Vendor exclusion list

You must develop a new solution to maintain a Vendor exclusion list for each customer and item combination.

The solution must meet the following requirements:

- * Isolate all new vendor exclusion codes as a new assembly by creating a table named Vend Exclusions.

- * Create an index for the table named PrimaryIdx that uses the following fields: CustAccount, ItemId, VendAccount.

- * Ensure that users can open the Vendor Exclusion list report from the customer master form. The list must display the customer account Item ID, and Vendor account fields.

- * Implement the Excel integration for the Vendor Exclusion List form.

- * Provide functionality to periodically export the Vendor exclusion list to prepare reports by using standard reporting capabilities of Dynamics 365 Unified Operations.

- * Develop necessary security permissions to view and maintain the new Vendor exclusion list functionality and reporting. Users with maintain rights will be able create, update, and delete the exclusion list. Permissions must be assigned to security roles to match company security model.

- * Maintain referential integrity with other tables.

- * Users must be presented with a warning message before a direct delivery purchase order is created for a vendor in exclusion list.

- * Sales managers must be alerted when a new exclusion record is added to the system.

Security

- * You must implement the record level audit feature to identify the users who created the record.

- * Grant specific users rights to maintain the vendor exclusion list by using Excel.

- * You must implement validation to check whether a proposed direct delivery purchase order vendor is on the exclusion list for the customer and product combination.

Issues

User1 is not able to access many features in the system. You must provide User1 administrator rights.

A sales manager suspects a data-related issue in the vendor exclusion list. User1 must identify the user who created the referenced exclusion records.

Developed joins the company and does not have access to a development environment or source control.

User2 reports performance issues when they generate direct delivery purchase orders after current updates are applied.

User2 reports that they cannot access new functionality and reports.

38. Frage

You are a Dynamics 365 Finance developer.

You need to ensure that an integration is triggered when a specific process starts.

Which tool should you use to retrieve the status from the Production order?

- A. Periodic flow
- B. Batch job
- **C. Business event**
- D. Recurring Data Entity export

Antwort: C

Begründung:

Explanation

Business events can be used as triggers from D365FO in Power Automate/MS Flow in an end to end way.

Reference:

<https://community.dynamics.com/ax/b/happyd365fo/posts/triggers-using-business-event-in-power-automate-and>

39. Frage

You are a Dynamics 365 Finance developer.

Users report that a sales table details form takes a long time to load and display data.

You need to optimize the performance by implementing caching.

Which two actions should you perform? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- **A. Associate all display and edit methods with the form data source instead of the table.**
- B. Create display and edit methods on the table instead of the form data source.
- **C. Call the FormDataSource.cacheAddMethod method.**
- D. Call the FormDataSource.research method.

Antwort: A,C

Begründung:

FormDataSource.cacheAddMethod Method

Cached methods perform calculations on fetched data, and then the calculated values are passed to the client together with the data.

The calculated values are updated on reread.

This method should be called after initialization of the data source, but before any data is fetched.

The following example registers two methods for caching on the VendTransOpen table.

```
public void init()
{
    super();
    this.cacheAddMethod(tablemethodstr(VendTransOpen,
    nextCashDiscDate));
    this.cacheAddMethod(tablemethodstr(VendTransOpen,
    nextCashDiscAmount));
}
```
