Salesforce Order Management Administrator Accredited Professional Sample Questions (Q100-Q105):

NEW QUESTION # 100

Which practice should an admin consider when working with the Ensure Funds Async action?

- A. The Invoice ID should be logged before passing it to the Ensure Funds Async action
- B. The invoice object should be logged and cloned to a custom object before calling the action
- C. The invoice object should be cloned to a custom object before calling the action
- **D. The invoice ID should be assigned somewhere in the flow before calling the action**

Answer: D

Explanation:

The Ensure Funds Async action requires the invoice ID as an input parameter. The action checks if there are enough funds available for the invoice and updates the invoice status accordingly. The invoice ID should be assigned somewhere in the flow before calling the action, otherwise the action will fail. Reference: Salesforce Payments and Order Management

NEW QUESTION # 101

What two tools can an administrator use to debug an issue with an Apex trigger?

- A. Error Logs in the Developer Console
- **B. Log Inspector in the Developer Console**
- **C. Debug Logs in Setup**
- D. Apex Logs in Setup

Answer: B,C

Explanation:

The administrator can use two tools to debug an issue with an Apex trigger: Log Inspector in the Developer Console and Debug Logs in Setup. The Log Inspector is a tool that displays a graphical representation of a debug log, which is a record of database operations, system processes, and errors that occur when executing a transaction or running unit tests. The Log Inspector helps you analyze and troubleshoot your code by highlighting errors, checkpoints, and execution times. The Debug Logs page in Setup lets you monitor and retain debug logs for users, Apex classes, Apex triggers, and Lightning components. You can view, download, or delete debug logs from this page.

NEW QUESTION # 102

The Ensure Funds process works on which set of Order Items?

- A. Only the items with a status of Waiting Payment
- B. All Items within a delivery group
- C. All Sales Order Items
- **D. Only the items passed into the Ensure Funds method**
- E. Only the items on the Fulfillment Order passed into the Ensure Funds method

Answer: D

Explanation:

The Ensure Funds process works on only the items passed into the Ensure Funds method. This method is a flow core action that verifies that there are enough funds available for each Order Item passed into it, and updates their payment status accordingly. The administrator can pass any Order Items into this method, regardless of their status or delivery group. Verified

NEW QUESTION # 103

Which three objects are found within Order Management?

Choose 3 answers

- A. Warehouse Checklist
- B. Shopping Bag
- C. Payment Summary
- D. Invoice
- E. Fulfillment Order

Answer: C,D,E

NEW QUESTION # 104

Universal Containers (UC) is evaluating Salesforce Order Management for managing its overarching process because their current system is written mostly in Apex code and has proved difficult to modify, deploy and debug. What are three advantages of using Flow Builder vs writing Apex code to manage the main flow of Order data?

- A. Because it is visual it is also self-documenting as changes are made
- B. It will notify the admin before a third party integration's data interface has changed
- C. The admin can attach a debugger to live customer sessions
- D. It allows for non-coding members of staff to contribute suggestions for optimizations and better overall customer experience
- E. The admin can easily debug specific business cases visually.

Answer: A,C,E

Explanation:

Three advantages of using Flow Builder vs writing Apex code to manage the main flow of Order data are:

The admin can attach a debugger to live customersessions. This allows the admin to monitor and troubleshoot the flow execution in real time, without affecting the customer experience or data integrity.

The admin can easily debug specific business cases visually. This allows the admin to test the flow with different input values and see how the flow behaves in a graphical interface, without writing any code.

Because it is visual it is also self-documenting as changes are made. This allows the admin to easily understand and maintain the flow logic, as well as track the changes and versions of the flow.
