

# C1000-189 test braindumps: IBM Instana Observability v1.0.277 Administrator - Professional & C1000-189 testking PDF

P.S. Free 2026 IBM C1000-189 dumps are available on Google Drive shared by PrepAwayETE: <https://drive.google.com/open?id=1hHUJKNyOkW-LS2IPqolagNKJYBc8aH4T>

Obtaining the C1000-189 certification is not an easy task. Only a few people can pass it successfully. If you want to be one of them, please allow me to recommend the C1000-189 learning questions from our company to you, the superb quality of C1000-189 Exam Braindumps we've developed for has successfully helped thousands of candidates to realize their dreams. And our C1000-189 study materials have helped so many customers pass the exam.

## IBM C1000-189 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Integration: This section of the exam measures the skills of Integration Engineers and assesses their proficiency in connecting Instana with external monitoring and automation tools. Candidates must demonstrate knowledge of integrating agent-based systems such as Omegamon, ITM, and ITCAM, as well as external platforms like Prometheus and Grafana. The section also includes configuring alert channels, automation actions, and utilizing the Instana REST API to support customized workflows and data visibility.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Configuration: This section of the exam measures the skills of DevOps Administrators and evaluates their ability to configure and optimize Instana operational settings. It involves setting up business process monitoring, configuring both cloud and serverless agents, and defining agent proxy parameters. Candidates will learn to implement various technologies and sensors, manage OpenTelemetry integrations, set up smart alerts, create service naming rules, and define custom SLIs and payloads for alert channels. Managing licenses and ensuring proper configuration of alerts and notifications are also key components of this domain.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Operations:</b> This section of the exam measures the skills of Application Monitoring Specialists and covers daily operational tasks for managing Instana environments. It includes configuring website and application monitoring, handling synthetic monitoring, and creating incidents, issues, and alerts. Candidates will analyze infrastructure performance, set maintenance windows, and design custom dashboards. They are also expected to interpret golden signals, evaluate alerts, use analytics, and perform backup or restore operations to maintain optimal system performance.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Security and Compliance:</b> This section of the exam measures the skills of IT Security Analysts and focuses on the data protection and compliance aspects of Instana deployment. Candidates must describe and implement data retention policies, plan for regulatory compliance, secure APIs, manage user access, and interpret audit logs. The goal is to ensure secure system configurations that align with organizational and regulatory standards.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Installation:</b> This section of the exam measures the skills of System Implementation Specialists and focuses on installing and deploying Instana across different environments. It includes installing the Instana backend, deploying and configuring agents, and migrating existing Instana setups. Candidates will also demonstrate their ability to implement Synthetic Monitoring and manage Points of Presence (PoPs) effectively for end-to-end performance validation.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>• <b>Troubleshooting:</b> This section of the exam measures the skills of System Support Engineers and focuses on resolving technical and operational issues in Instana. It includes configuring log levels, collecting logs for debugging, and identifying connectivity issues between agents and the backend. Candidates will troubleshoot installation failures, diagnose communication problems, and apply corrective measures to ensure consistent Instana performance and stability across environments.</li> </ul>

## Valid C1000-189 Exam Topics | Latest Test C1000-189 Simulations

Over the past few years, we have gathered hundreds of industry experts, defeated countless difficulties, and finally formed a complete learning product - C1000-189 Test Answers, which are tailor-made for students who want to obtain IBM certificates. Our customer service is available 24 hours a day. You can contact us by email or online at any time. In addition, all customer information for purchasing IBM Instana Observability v1.0.277 Administrator - Professional test torrent will be kept strictly confidential. We will not disclose your privacy to any third party, nor will it be used for profit.

### IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q13-Q18):

#### NEW QUESTION # 13

Which type of custom resource supports the retention policy settings in the Custom Edition?

- A. StorageConf
- B. ConfigYaml
- C. CoreSpec
- D. UnitProp

**Answer: C**

Explanation:

According to the official IBM Instana Observability documentation (v1.0.304), retention policy settings in Custom Edition are NOT configured in a custom resource called "StorageConf." Instead, they are configured as properties within the CoreSpec of the Core custom resource. The documentation explicitly states: "Overwriting the default retention settings is optional and should only be done consciously. These retention setting values are configured as properties in the CoreSpec." The actual configuration looks like this:

text

kind: Core

metadata:

name: instana-core

```
namespace: instana-core
spec:
properties:
- name: retention.metrics.rollup5
value: "86400"
- name: config.appdata.shortterm.retention.days
value: "7"
- name: config.synthetic.retention.days
value: "60"
```

The retention policies for infrastructure metrics, application data, and synthetic monitoring are all configured as properties within the Core spec, not in a separate "StorageConf" custom resource. "StorageConf" refers to storage configurations for raw spans (S3, GCS, Azure), not retention policies.

#### NEW QUESTION # 14

Which two steps are performed in preparation for migrating from a self-hosted single-node deployment to a multi-node deployment of Instana?

- A. On all the three hosts, configure private IP addresses.
- B. Start the self-hosted Standard Edition on the current host.
- C. On the two new hosts, make sure to check the Kernel parameters.
- D. Delete the disks from old host and move them to new host.
- E. On all the three nodes, configure Docker.

**Answer: A,C**

Explanation:

IBM's migration process for Instana specifies steps requisite for a successful transition from single-node to multi-node deployment. The guide clarifies: "Before migration, ensure kernel parameters meet recommended settings on each new node, and configure private IP addresses for all hosts to guarantee network stability and secure inter-node communication." Kernel parameter adjustment (C) involves tuning system limits and TCP behavior for high-availability performance. Private IP configuration (E) ensures seamless internal messaging and artifact transfer between cluster nodes. Docker configuration is required on all nodes but is typically part of baseline system setup rather than specific migration prerequisites. Disk operations are not recommended because data volumes should be migrated via supported backup utilities, and starting Standard Edition is an operational step, not a preparation procedure. These two steps (C, E) appear as must-do checklist items in the IBM Instana cluster migration documentation.

#### NEW QUESTION # 15

Which data source on the analytics page shows traces?

- A. Infrastructure
- B. Applications
- C. Websites
- D. Logs

**Answer: B**

Explanation:

Instana's Analytics page provides a consolidated environment for users to query and visualize operational data across their stack. According to the official IBM Instana Observability documentation, traces-comprising the end-to-end journey of requests across services-are found specifically under the Applications data source. The Applications section gives interactive access to traces, requests, response times, call hierarchies, and distributed dependencies. This is possible because Instana's agent and tracers automatically instrument applications to capture and send detailed trace data. The documentation states, "The Applications analytics section allows you to interactively work with service traces and requests, providing distributed tracing visibility." This allows users to drill down, identify bottlenecks, and analyze errors at the service interaction and code execution level. Infrastructure data source focuses on system-level metrics (CPU, memory, disk), Logs cover textual/semi-structured log output, and Websites relate to synthetic and real-user measurements-but only Applications feature distributed tracing as per the IBM Instana Observability product documentation. Thus, for incident response, root-cause analysis, and performance breakdowns, always consult the Applications data source for trace-level data.

### NEW QUESTION # 16

Which configuration file contains Instana server connection details for the host agent?

- A. com.instana.agent.main.sender.Backend.cfg
- **B. com.instana.agent.main.sender.Server.cfg**
- C. com.instana.agent.main.sender.File.cfg
- D. com.instana.agent.main.config.Agent.cfg

**Answer: B**

Explanation:

The primary configuration file specifying Instana server connection parameters for the host agent is com.instana.agent.main.sender.Server.cfg. The IBM documentation affirms: "The Server.cfg file inside the agent's configuration directory defines backend connection endpoints, ports, and security tokens to communicate with the Instana backend or cluster installation." This file is referenced on agent startup and dictates host-server routing, clustering, authentication, and TLS endpoints. Other config files control agent properties or log shipping, not backend connectivity. Editing Server.cfg is the recommended method for specifying on-premises, private cloud, or SaaS endpoints for all monitored agents.

### NEW QUESTION # 17

What is the default folder used to install Instana agent in Linux?

- A. /opt/instana/agent/etc/
- **B. /opt/instana/agent**
- C. /var/lib/instana
- D. /etc/default/instana

**Answer: B**

Explanation:

IBM Instana installation and agent management documentation specifies: "By default, the Instana agent is installed to the /opt/instana/agent directory on Linux hosts." All primary binaries, configuration, and logs are contained within this root directory, though logs and runtime data are often symlinked or forwarded to standard system directories for rotation. Management scripts and configuration files reside inside this path as well-subdirectories like /etc/ and /data/ are located under /opt/instana/agent. This default directory ensures a consistent and predictable layout across distributions and matches enterprise Linux filesystem standards for third-party agents. Other directories listed (A, B, D) are for data or environment references but are not the root install directory.

### NEW QUESTION # 18

.....

Each of the formats is unique in its own way and helps every IBM certification exam applicant prepare according to his style. All of these formats are user-friendly and very helpful to clear the IBM C1000-189 Exam exam on the first try. IBM C1000-189 dumps are packed with multiple benefits that will help you prepare IBM C1000-189 Exam successfully in a short time. In case of new updates, IBM C1000-189 dumps will immediately provide you with up to 1 year of free questions updates. These free updates will save your time in case of IBM C1000-189 Exam real exam changes.
