156-836 Valid Dumps Ppt, Latest 156-836 Exam Fee

Only high-quality and high-precision 156-836 qualification question can enable learners to be confident to take the qualification examination, and our 156-836 learning materials are such high-quality learning materials, it can meet the user to learn the most popular test site knowledge. Because our experts have extracted the frequent annual test centers are summarized to provide users. Only excellent learning materials such as our 156-836 Study Tool can meet the needs of the majority of candidates, and now you should make the most decision is to choose our 156-836 exam questions.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q64-Q69):

NEW QUESTION # 64
What is one benefit of a Dual MHO environment?

- A. Dual MHOs allow additional SGMs to be added to the SG.
- B. Dual MHOs provide redundancy to the Maestro environment by increasing throughput by at least 50 percent.
- C. Dual MHOs allow better synchronization to occur between SGMs.
- D. Dual MHOs can be used to achieve increased scalability and redundancy..

Answer: D

Explanation:
One of the benefits of a Dual MHO environment is that it can provide both scalability and redundancy to the Maestro system. Scalability means that the system can handle more traffic and SGMs as the demand grows, and redundancy means that the system can survive the failure of one or more components without losing functionality or performance. Dual MHOs can achieve these benefits by distributing the load and the management tasks among two orchestrators, and by providing backup and failover mechanisms for each other.

NEW QUESTION # 65
What is the purpose of Management ports located on the Rear Panel of the Orchestrator MHO-140?

- A. 1Gbps connectivity for Security Groups
- B. Out-of-band interfaces for access to Orchestrator itself
- C. Reserved for internal purposes. Not in use.
- D. Additional ports used as uplinks

Answer: B

Explanation:
Explanation
The Management ports located on the Rear Panel of the Orchestrator MHO-140 are out-of-band interfaces that provide access to the Orchestrator itself for configuration and management purposes. They are not used for traffic distribution or connectivity to the Security Groups or the external networks. They are 1Gbps RJ-45 ports that can be connected to a switch or a router.

NEW QUESTION # 66
What is a downlink interface used for?

- A. To connect appliances to Orchestrators
- B. To connect in between Orchestrators
- C. To connect appliances to customer's infrastructure
- D. To connect Orchestrators to customer's infrastructure

Answer: C

NEW QUESTION # 67
Which licenses should be issued for the Orchestrator?

- A. The Orchestrator requires NGTX license
- B. Depends on Software Blades enabled on connected appliances
- C. No licenses are required for Orchestrator
- D. The Orchestrator is considered a Management server, hence it's licensed the same way

Answer: C

Explanation:
Explanation
Orchestrators in many network environments do not require separate licenses, as they primarily function to manage and distribute network traffic.

NEW QUESTION # 68
What does the lldpctl command do?

- A. Show all devices discovered by LLDP protocol on uplink ports
- B. Show all devices discovered by LLDP protocol on all ports
- C. Show all devices discovered by LLDP protocol on downlink ports
- D. Discover orchestrators

Answer: B

Explanation:
Explanation
The lldpctl command is a tool to display information about the devices discovered by the Link Layer Discovery Protocol (LLDP) on all ports of the Maestro Orchestrator and the Security Group Members. LLDP is a protocol that enables devices to exchange information about their identity, capabilities, and configuration.
LLDP can help to discover the topology and connectivity of the Maestro environment.
