MuleSoft-Integration-Associate Book Free | Latest MuleSoft-Integration-Associate Version

There are more opportunities for possessing with a certification, and our MuleSoft-Integration-Associate study materials are the greatest resource to get a leg up on your competition, and stage yourself for promotion. When it comes to our time-tested MuleSoft-Integration-Associate study materials, for one thing, we have a professional team contains a lot of experts who have devoted themselves to the research and development of our MuleSoft-Integration-Associate Study Materials, thus we feel confident enough under the intensely competitive market. For another thing, conforming to the real exam our MuleSoft-Integration-Associate study materials have the ability to catch the core knowledge.

Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q35-Q40):

NEW QUESTION # 35
What are two reasons why a typical MuleSoft customer favors a MuleSoft-hosted AnypointPlatform runtime plane over a customer-hosted runtime for its Mule application deployments? (Choose two.)

- A. Reduced time-to-market for the first application
- B. increased application isolation
- C. Reduced application latency
- D. Reduced IT operations effort
- E. Increased application throughput

Answer: A,D

Explanation:

Choosing a MuleSoft-hosted Anypoint Platform runtime plane offers several advantages, particularly in terms of deployment efficiency and operational management. Here's a detailed explanation of the selected reasons:

* Reduced Time-to-Market for the First Application:

* Pre-Configured Environment: MuleSoft-hosted Anypoint Platform provides a ready-to-use environment, which accelerates the deployment process.

* Ease of Use: Developers can quickly set up and deploy applications without the need for extensive infrastructure setup and configuration.

* Reduced IT Operations Effort:

* Managed Services: MuleSoft handles the infrastructure management, including updates, scaling, and maintenance, reducing the operational burden on the IT team.

* Focus on Development: IT teams can focus on developing and optimizing applications rather than managing runtime environments.

NEW QUESTION # 36

What is an advantage of using OAuth 2 0 client credentials and access tokens over only API keys for API authentication?

- A. If the client ID is compromised it can be exchanged for an API key
- B. If the access token is compromised, the client credentials do not have to be reissued
- C. If the access token is compromised it can be exchanged for an API key
- D. If the client secret is compromised, the client credentials do not have to be reissued

Answer: B

Explanation:

OAuth 2.0 provides a more secure and flexible way of handling API authentication compared to API keys.

Here's a detailed explanation of the advantage mentioned:

* OAuth 2.0 Client Credentials Grant:

* How It Works: In this flow, a client application uses its client ID and client secret to obtain an access token from the authorization server.

* Access Tokens: These tokens are short-lived and used to authenticate API requests.

* Security Advantages:

* Token Compromise: If an access token is compromised, it only grants limited access because it has a short lifespan and can be easily revoked.

* Client Credentials: The client credentials (client ID and secret) are not exposed during API calls, reducing the risk of them being compromised.

* Token Refresh: New tokens can be obtained without exposing the client credentials again.

* Comparison with API Keys:

* API Keys: If an API key is compromised, it often provides long-term access without expiration.

Revoking the API key impacts all users or applications using it.

* OAuth Tokens: Compromised tokens can be individually revoked without needing to change the client credentials, minimizing disruption.

NEW QUESTION # 37

A system administrator needs to determine when permissions were last changed for an Anypoint Platform user.

Which Anypoint Platform component should the administrator use to obtain this information?

- A. Mule Stack Traces
- B. Anypoint Studio
- C. Audit Logging
- D. Anypoint Monitoring

Answer: C

NEW QUESTION # 38

A developer is examining the responses from a RESTful web service that is compliant with the Hypertext Transfer Protocol (HTTP/1 1) as defined by the Internet Engineering Task Force (IETF).

In this HTTP/1 1-comphanl web service, which class of HTTP response status codes should be specified to indicate when client requests are successfully received, understood and accepted by the web service?

- A. 2xx
- B. 4xx
- C. 5xx
- D. 3xx

Answer: A

NEW QUESTION # 39

An organization is not meeting its growth and innovation objectives because IT cannot deliver projects fast enough to keep up with the pace of change required by the business.

According to MuleSoft's IT delivery and operating model which step should the organization take to solve this problem?

- A. Modify IT governance and security controls so that line of business developers can have direct access to the organization's systems of record
- B. Hire more IT developers, architects, and project managers to increase IT delivery
- C. Adopt a new approach that decouples core IT projects from the innovation that happens within each line of business
- D. Switch from a design-first to a code-first approach for IT development

Answer: C

Explanation:

MuleSoft's IT delivery and operating model suggests modernizing IT practices to better support business growth and innovation. Here's a detailed explanation:
* Decoupling Core IT Projects:
* Definition: Decoupling involves separating the core IT systems and projects from the innovative and experimental projects conducted by various lines of business.
* Benefits:
* Agility: Enables lines of business to innovate rapidly without being held back by the constraints of core IT systems.
* Focus: Allows core IT to focus on maintaining and enhancing critical systems while business units can experiment and deploy new solutions more quickly.
* Implementation:
* API-led Connectivity: By using an API-led connectivity approach, core IT can expose reusable APIs and services that business units can leverage for their innovation efforts.
* Governance and Security: Ensuring that proper governance and security measures are in place to protect core systems while allowing flexibility for innovation.
* Outcome:
* Faster Delivery: Speeds up the delivery of new features and solutions, aligning with business needs and market demands.
* Enhanced Collaboration: Facilitates better collaboration between IT and business units, driving overall organizational growth.
