Comprehensive, up-to-date coverage of the entire Plat-Admn-202 Salesforce Certified Platform App Builder curriculum

Our after sales services are also considerate. If you get any questions with our Plat-Admn-202 guide question, all helps are available upon request. Once you place your order this time, you will enjoy and experience comfortable and convenient services immediately. Besides, we do not break promise that once you fail the Plat-Admn-202 Exam, we will make up to you and relieve you of any loss. Providing with related documents, and we will give your money back. We have been always trying to figure out how to provide warranty service if customers have questions with our Plat-Admn-202 real materials.

Salesforce Plat-Admn-202 Exam Syllabus Topics:

Topic	Details

Topic 1	• Business Logic and Process Automation: This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.
Topic 2	• User Interface: This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.
Topic 3	• App Deployment: This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.
Topic 4	• Data Modeling and Management: This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.
Topic 5	• Salesforce Fundamentals: This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.

Salesforce Certified Platform App Builder Sample Questions (Q115-Q120):

NEW QUESTION # 115
Universal Containers utilizes opportunities and a custom object called Detaited.Sales__c. The company would like to roll sales metrics up to an opportunity for only Detailed.Sales__c records that have their picklist status set to Active.
What is the recommended method for the app builder to achieve this request?

- A. Create a lookup relationship between the parent and child object with a roll-up summary held that filters on the status field.
- B. Utilize Apex code to roll up the desired amounts.
- C. Create a master-detail relationship between the parent and child object with a roll-up summary field that fitters on the status held.
- D. Utilize the AppExchange to download a third-party application that can roll_up the sales dollars with the appropriate filter.

Answer: C

Explanation:
Create a master-detail relationship between the parent and child object with a roll-up summary field that filters on the status field is the recommended method for the app builder to achieve the request of rolling up sales metrics to an opportunity for only Detailed.Sales__c records that have their picklist status set to Active. According to the Salesforce documentation, "Roll-up summary

fields calculate values from related records, such as those in a master-detail relationship." A roll-up summary field can filter on a field value of the child records and sum up only those records that match the criteria. Utilize the AppExchange to download a third-party application that can roll up the sales dollars with the appropriate filter, create a lookup relationship between the parent and child object with a roll-up summary field that filters on the status field, and utilize Apex code to roll up the desired amounts are not valid or necessary methods for this request.

NEW QUESTION # 116

The developer at Universal Containers wants to test code in a sandbox environment. In order to ensure the code works properly, the sandbox needs to have at least half a gigabyte of data. The sandbox will need to be refreshed after each three-day sprint. What type of sandbox should the App Builder provision to the developer?

- A. Developer
- B. Full Copy
- C. Partial Data
- D. Developer Pro

Answer: C

Explanation:
The app builder should provision a Partial Data sandbox to the developer. A Partial Data sandbox can have up to 5 GB of data, which meets the requirement of having at least half a gigabyte of data. A Partial Data sandbox can also be refreshed every 5 days, which meets the requirement of refreshing after each three-day sprint. Option A is incorrect because a Developer sandbox can only have up to 200 MB of data, which does not meet the requirement. Option B is incorrect because a Full Copy sandbox can only be refreshed every 29 days, which does not meet the requirement. Option C is incorrect because a Developer Pro sandbox can only have up to 1 GB of data, which may not be enough for the requirement.

NEW QUESTION # 117

Cloud Kicks has a sales rep who is stating that their Contact is unavailable for other users to see within Salesforce.
In which three ways can an app builder troubleshoot this issue?
Choose 3 answers

- A. Confirm whether Default Organization-Wide Sharing Settings provide access to the Account.
- B. Create a new Contact and have the users try again.
- C. Review the Contact record and ensure it is linked to an Account.
- D. Verify the users with the issue have access to the Contact object.
- E. Create an Account Sharing Rule to give the users access to all records.

Answer: A,C,D

Explanation:
To troubleshoot the issue of a contact being unavailable for other users to see, an app builder should check the following things:
Confirm whether Default Organization-Wide Sharing Settings provide access to the Account. This setting determines the baseline level of access that users have to each other's records.
Review the Contact record and ensure it is linked to an Account. Contacts that are not linked to an account are private and only visible to the owner and administrators.
Verify the users with the issue have access to the Contact object. Users need to have at least read permission on the Contact object to view contact records. Option A and E are not relevant for troubleshooting this issue.

NEW QUESTION # 118

The app builder needs to change the data types of new custom fields. The app builder is not able to delete and recreate any of the fields, nor modify any apex code. Which data type change will require the app builder to perform the additional steps in order to retain existing functionalities?

- A. Changing the data type of a field used in lead conversion from number to text
- B. Changing the data type of a field used in an apex class from number to text.
- C. Changing the data type of a field used in a report from a text to an encrypted field
- D. Changing the data type of a field used as an external id from number to text.

Answer: B

Explanation:
Changing the data type of a field used in an apex class from number to text will require the app builder to perform additional steps in order to retain existing functionalities. This is because changing the data type of a field may affect the apex code that references or manipulates the field value, and may cause compilation errors or unexpected results. The app builder will need to update the apex code to handle the new data type and ensure that the logic and calculations are still correct. Option B is incorrect because changing the data type of a field used in a report from a text to an encrypted field will not require additional steps, as encrypted fields can still be used in reports with some limitations. Option C is incorrect because changing the data type of a field used as an external id from number to text will not require additional steps, as external id fields can be either number or text. Option D is incorrect because changing the data type of a field used in lead conversion from number to text will not require additional steps, as lead conversion fields can be mapped regardless of their data types.

NEW QUESTION # 119

Which two solutions prevent a formula field from being referenced by a Roll-Up Summary Field?

- A. A cross-object field reference in the formula field
- B. A cross-object workflow updating a field referenced by the formula field
- C. The NOW () function in the formula field
- D. The CASE () function in the formula field

Answer: A,C

Explanation:
A formula field cannot be referenced by a roll-up summary field if it contains a cross-object field reference or a time-based function. A cross-object field reference is a reference to a field from a different object, such as Account. Name on a Contact object. A time-based function is a function that returns the current date or time, such as NOW() or TODAY(). Option A and C do not prevent a formula field from being referenced by a roll-up summary field.

NEW QUESTION # 120

......

First and foremost, the pass rate of our Plat-Admn-202 training guide among our customers has reached as high as 98% to 100%, which marks the highest pass rate in the field, we are waiting for you to be the next beneficiary. Second, you can get our Plat-Admn-202 practice test only in 5 to 10 minutes after payment, which enables you to devote yourself to study with our Plat-Admn-202 Exam Questions as soon as possible. Last but not least, you will get the privilege to enjoy free renewal of our Plat-Admn-202 preparation materials during the whole year. All of the staffs in our company wish you early success.
