You will understand the reason why we are so confident to say that the CIPT Exam Torrent compiled by our company is the top-notch CIPT exam torrent for you to prepare for the exam. You can choose to download our free demo at any time as you like, you are always welcome to have a try, and we trust that our CIPT exam materials will never let you down.

## IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q69-Q74):

### NEW QUESTION # 69

What is the distinguishing feature of asymmetric encryption?

- A. It has a stronger key for encryption than for decryption.
- B. It uses distinct keys for encryption and decryption.

- C. It employs layered encryption using dissimilar methods.
- D. It is designed to cross operating systems.

**Answer: B**

Explanation:

Reference:

The distinguishing feature of asymmetric encryption is that it uses distinct keys for encryption and decryption<sup>3</sup>. Asymmetric encryption, also known as public-key encryption, involves two keys: a public key that can be shared with anyone and used to encrypt messages; and a private key that is kept secret by its owner and used to decrypt messages<sup>3</sup>. The other options are not features of asymmetric encryption.

**NEW QUESTION # 70**

In day to day interactions with technology, consumers are presented with privacy choices. Which of the following best represents the Privacy by Design (PbD) methodology of letting the user choose a non-zero-sum choice?

- A. Using images, words, and contexts to elicit positive feelings that result in proactive behavior, thus eliminating negativity and biases.
- B. **Providing plain-language design choices that elicit privacy-related responses, helping users avoid errors and minimize the negative consequences of errors when they do occur.**
- C. Displaying the percentage of users that chose a particular option, thus enabling the user to choose the most preferred option.
- D. Using contexts, antecedent events, and other priming concepts to assist the user in making a better privacy choice.

**Answer: B**

**NEW QUESTION # 71**

**SCENARIO**

Please use the following to answer the next question:

Light Blue Health (LBH) is a healthcare technology company developing a new web and mobile application that collects personal health information from electronic patient health records. The application will use machine learning to recommend potential medical treatments and medications based on information collected from anonymized electronic health records. Patient users may also share health data collected from other mobile apps with the LBH app.

The application requires consent from the patient before importing electronic health records into the application and sharing it with their authorized physicians or healthcare provider. The patient can then review and share the recommended treatments with their physicians securely through the app. The patient user may also share location data and upload photos in the app. The patient user may also share location data and upload photos in the app for a healthcare provider to review along with the health record. The patient may also delegate access to the app.

LBH's privacy team meets with the Application development and Security teams, as well as key business stakeholders on a periodic basis. LBH also implements Privacy by Design (PbD) into the application development process.

The Privacy Team is conducting a Privacy Impact Assessment (PIA) to evaluate privacy risks during development of the application. The team must assess whether the application is collecting descriptive, demographic or any other user related data from the electronic health records that are not needed for the purposes of the application. The team is also reviewing whether the application may collect additional personal data for purposes for which the user did not provide consent.

The Privacy Team is conducting a Privacy Impact Assessment (PIA) for the new Light Blue Health application currently in development. Which of the following best describes a risk that is likely to result in a privacy breach?

- A. **Limiting access to the app to authorized personnel.**
- B. Including non-transparent policies, terms and conditions in the app.
- C. Not encrypting the health record when it is transferred to the Light Blue Health servers.
- D. Insufficiently deleting personal data after an account reaches its retention period.

**Answer: A**

**NEW QUESTION # 72**

What is the main benefit of using dummy data during software testing?

- A. The data comes in a format convenient for testing.
- B. Statistical disclosure controls are applied to the data.
- C. The data enables the suppression of particular values in a set.
- D. Developers do not need special privacy training to test the software.

**Answer: D**

Explanation:  
Explanation

#### NEW QUESTION # 73

Which of the following is an example of an appropriation harm?

- A. A hacker gains access to your email account and reads your messages.
- B. A friend takes and uploads your pictures to a social media website.
- C. An unauthorized individual obtains access to your personal information and uses it for medical fraud.
- D. A government agency uses cameras to monitor your movements in a public area.

**Answer: C**

Explanation:

Appropriation harms occur when someone's personal information is used without their consent, often for malicious purposes. An unauthorized individual obtaining access to personal information and using it for medical fraud is a clear example of appropriation harm because it involves the misuse of someone's personal data for fraudulent activities, potentially causing significant financial and personal damage to the victim. The IAPP emphasizes that appropriation harms are serious privacy violations that require stringent safeguards to protect individuals' personal data from unauthorized use.
