Snowflake SnowPro Core Certification Exam Sample Questions (Q101-Q106):

NEW QUESTION # 101

A JSON document is stored in the source_column of type VARIANT. The document has an array called elements. The array contains the name key that has a string value. How can a Snowflake user extract the name from the first element?

- A. Source_column.element[0].name
- B. Source_column.element[0].name
- C. Source_column.element[1].name
- D. **Source_column.element[1].name**

Answer: D

Explanation:

In Snowflake, when dealing with semi-structured data such as a JSON document stored in a VARIANT column, the proper syntax to extract a value is to use the column name followed by the path to the specific element. Since arrays in JSON are zero-indexed, the

first element is referenced with[0]. Therefore, to extract the name from the first element of the elements array, the correct syntax is `source_column:elements[0].name`.

How long is a query visible in the Query History page in the Snowflake Web Interface (UI)?

- A. 14 days
- B. 30 days
- C. 24 hours
- D. 60 minutes

Answer: A

Explanation:

In the Snowflake Web Interface (UI), the Query History page displays the history of queries executed in Snowflake for up to 14 days. The Query History page is a critical tool for monitoring and optimizing the use of Snowflake.
