NEW QUESTION # 54

What are the benefits of the Check Point Consolidated Cyber Security Architecture?

- A. Consolidated network functions
- B. Single policy
- **C. Consolidated security functions**
- D. Decentralized management

Answer: C

Explanation:

The Check Point Consolidated Cyber Security Architecture is designed to integrate multiple security functions into a unified platform. This architecture provides "consolidated security functions," which is its primary benefit. This means it combines endpoint protection, data security, and threat prevention into a single, manageable system, improving efficiency and simplifying security administration for organizations. While

"Consolidated network functions" (A) might sound similar, it's too vague and not the focus of the architecture. "Single policy" (B) is not highlighted as a standalone benefit, and "Decentralized management" (C) contradicts the centralized approach of this architecture. Thus, "Consolidated security functions" (D) is the correct answer, as it aligns directly with the documented advantages.
