

SAP C-BCBTP-2502合格記、C-BCBTP-2502テストサンプル問題

ご存知のように、C-BCBTP-2502証明書は、グローバル市場で非常に高い評価を得ており、大きな影響力を持っています。しかし、SAP証明書を取得する方法は多くの人々にとって頭痛の種になりました。C-BCBTP-2502学習教材はあなたに機会を提供します。C-BCBTP-2502試験の実施を選択すると、あらゆる思いやりのあるサービスを提供できるように最善を尽くします。当社の製品はお客様の観点から設計されており、採用した専門家が変化する傾向に応じてC-BCBTP-2502のSAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite学習教材を更新し、C-BCBTP-2502学習教材の高品質を確保します。

SAP C-BCBTP-2502 認定試験の出題範囲：

トピック	出題範囲
トピック 1	<ul style="list-style-type: none">Discovering SAP Business Technology Platform: This section of the exam measures the skills of SAP Solution Architects and focuses on positioning the SAP Business Technology Platform within the overall SAP Business Suite strategy. It includes understanding the platform's role in enabling transformation, aligning with enterprise strategy, and supporting digital innovation. Candidates are expected to recognize the relevance of SAP BTP in modern business processes and how it integrates with other SAP offerings.
トピック 2	<ul style="list-style-type: none">Illustrating CIO Transformation Delivered by SAP Business Suite: This section of the exam evaluates the skills of IT Transformation Managers and covers the role of SAP Business Suite in delivering value for CIO-led digital transformation. It highlights the significance of SAP's portfolio in enterprise IT, introduces the capabilities of SAP BTP, and shows how it connects with end-to-end processes and industry-specific use cases. Candidates should also be able to identify the key products within SAP BTP and explain how cross-portfolio components integrate to deliver measurable value.

C-BCBTP-2502試験の準備方法 | ハイパスレートのC-BCBTP-2502合格記試験 | 効果的なSAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suiteテストサンプル問題

最も少ない時間とお金でSAP C-BCBTP-2502認定試験に高いポイントを取得したいですか。短時間で一度に本当の認定試験に高いポイントを取得したいなら、我々JapancertのSAP C-BCBTP-2502日本語対策問題集は絶対にあなたへの最善なオプションです。このいいチャンスを把握して、JapancertのC-BCBTP-2502試験問題集の無料デモをダウンロードして勉強しましょう。

SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite 認定 C-BCBTP-2502 試験問題 (Q36-Q41):

質問 # 36

Which SAP BTP tool helps organizations manage sustainability risks and compliance?

- A. SAP Integration Suite
- B. SAP BusinessObjects
- **C. SAP Sustainability Control Tower**
- D. SAP Workflow Management

正解: C

解説:

As global regulations regarding Environmental, Social, and Governance (ESG) standards become more stringent, organizations must move beyond manual reporting to automated sustainability management. SAP Sustainability Control Tower, which runs on SAP BTP, is designed specifically for this purpose. It helps organizations manage sustainability risks and compliance by providing a centralized "control center" that collects and processes ESG data from across the enterprise and its supply chain.

The tool leverages the data management and analytics capabilities of BTP (specifically SAP Datasphere and SAP Analytics Cloud) to provide a transparent view of a company's sustainability performance against its targets. It allows for the integration of non-financial data-such as carbon emissions, water usage, and labor statistics-with traditional financial data from the SAP Business Suite. This positioning is vital because it enables "holistic steering," where sustainability is treated with the same rigor as financial profitability. By using SAP Sustainability Control Tower on BTP, businesses can ensure they are meeting legal compliance requirements while also building trust with investors and customers through verified, data-driven sustainability disclosures.

質問 # 37

How does SAP HANA Cloud improve business data processing?

- **A. Enables in-memory computing for real-time analytics.**
- B. Eliminates cloud computing in favor of on-premise storage.
- C. Restricts data access to SAP applications only.
- D. Requires batch processing for data retrieval.

正解: A

解説:

The primary innovation of SAP HANA Cloud is its in-memory computing engine, which stores data in RAM rather than on traditional spinning disks. This architecture allows for the processing of vast amounts of data at speeds that are orders of magnitude faster than legacy databases. For the SAP Business Suite, this means that the boundary between "doing the work" (transactions) and "analyzing the work" (analytics) disappears. Users can run complex, multi-dimensional analytical queries on live, "hot" data without the need for time-consuming data extracts or batch processing.

By enabling real-time analytics, SAP HANA Cloud empowers business leaders to make decisions based on what is happening now, rather than what happened last week. It also introduces "data tiering," which allows organizations to manage costs by keeping frequently accessed data in-memory while moving less critical data to cheaper "warm" or "cold" storage (Data Lake), all while keeping it accessible through a single interface.

This flexibility is essential for modern enterprises that deal with "Big Data" but require the agility of the cloud. Positioning HANA Cloud as the data foundation of BTP ensures that every application built on the platform is inherently fast, scalable, and capable of delivering instant insights.

質問 # 38

What is a key feature of SAP BTP's AI capabilities?

- A. Rule-based decision-making without machine learning.
- **B. Automated decision-making with machine learning models.**
- C. Limited AI functionalities restricted to specific SAP modules.
- D. AI processing without cloud-based analytics support.

正解: B

解説:

SAP BTP's approach to Artificial Intelligence is centered on the concept of "Business AI," which means AI is built specifically for business contexts and is deeply embedded within the SAP applications users use every day. A key feature of this capability is

automated decision-making with machine learning (ML) models.

Unlike traditional rule-based systems that follow rigid "if-then" logic, ML models within BTP can analyze vast amounts of historical data to identify patterns and predict future outcomes. This allows the platform to provide recommendations, such as identifying the best supplier based on past performance or flagging potentially fraudulent financial transactions.

The AI Foundation on SAP BTP provides developers with ready-to-use services and tools to build, run, and manage AI-led extensions. This includes access to Large Language Models (LLMs) and specialized machine learning services that are pre-trained on business data. By positioning AI as a core component of BTP, SAP ensures that intelligence is not an afterthought but a central part of the business process. This enables a shift from reactive data entry to proactive, data-driven management. Furthermore, these AI capabilities are tightly integrated with SAP Analytics Cloud, ensuring that the insights generated by machine learning models are immediately actionable through intuitive visualizations and dashboards, thereby driving the digital transformation of the SAP Business Suite.

質問 # 39

How does SAP BTP support hybrid cloud strategies?

- A. By restricting enterprises to a single cloud vendor.
- B. By enforcing cloud-only solutions without on-premise support.
- C. By allowing seamless integration between on-premise and cloud systems.
- D. By eliminating the need for cloud-based analytics.

正解: C

解説:

Most large enterprises do not operate solely in the cloud; they maintain a "hybrid" environment consisting of legacy on-premise systems (like SAP ERP 6.0) and modern cloud applications (like SAP S/4HANA Cloud).

SAP BTP supports hybrid cloud strategies by acting as the bridge between these two worlds. Through the SAP Connectivity Service and the Cloud Connector, BTP establishes a secure, encrypted tunnel that allows cloud-based services to access on-premise data and processes without requiring complex VPN setups or opening vulnerable firewall ports.

This capability is essential for businesses that are mid-transition in their digital transformation journey. It allows them to keep their core "system of record" on-premise for compliance or technical reasons while still taking advantage of cloud-native innovations on BTP, such as advanced analytics, AI, and mobile extensions.

By positioning BTP as a hybrid-ready platform, SAP ensures that customers can modernize at their own pace.

This "side-by-side" extensibility model ensures that the on-premise core remains clean and stable, while the cloud layer provides the agility needed to respond to market changes. This flexibility is a cornerstone of the SAP Business Suite's value proposition, offering a path to the cloud that respects the existing investments of the enterprise.

質問 # 40

Which SAP BTP service plays a key role in integrating finance-related processes across enterprise systems?

- A. SAP Ariba
- B. SAP Integration Suite
- C. SAP Conversational AI
- D. SAP Business Network

正解: B

解説:

In the modern enterprise, financial processes rarely exist in a vacuum; they often require data from procurement, sales, payroll, and external banking institutions. SAP Integration Suite is the essential service on SAP BTP that facilitates this cross-system connectivity. It acts as an Integration Platform-as-a-Service (iPaaS) that enables the seamless flow of financial data between the SAP S/4HANA core and other third-party or legacy systems. By utilizing pre-built integration flows and specialized adapters, organizations can automate complex financial tasks such as bank statement processing, tax reporting across different jurisdictions, and real-time payment reconciliations.

The strategic positioning of the Integration Suite within the finance domain is to eliminate "data islands." When financial data is siloed, it leads to delays in closing the books and increases the risk of manual errors.

By using SAP Integration Suite, businesses can ensure that every financial transaction—regardless of where it originates—is reflected accurately in the central ledger. This real-time synchronization is critical for maintaining compliance and providing the CFO's office with an accurate, up-to-the-minute view of the company's financial health. While SAP Ariba and SAP Business Network handle specific transactional interactions, they rely on the underlying Integration Suite to pass that data back into the core financial systems.
