Prepare Well For Exam With Real And Updated Nutanix NCP-DB-6.10 Dumps PDF

We update our NCP-DB-6.10 Test Prep within one year and you will download free which you need. After one year, we provide the client 50% discount benefit if buyers want to extend their service warranty so you can save much money. If you are the old client, you can enjoy some certain discount when buying NCP-DB-6.10 exam torrent so you can enjoy more service and more benefits. Our update can provide the latest and most useful Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 prep torrent to you and you can learn more and master more. Because we update frequently, the client can understand the latest change and trend in the theory and the practice. So you will benefit from the update a lot.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q258-Q263):

NEW QUESTION # 258

Which ports are used by the NDB database agent for API calls?

- A. 5985 and 9389
- B. 3205 and 3260
- C. 443 and 9440
- D. 443 and 8080

Answer: C

Explanation:

The NDB database agent is a service that runs on each database server VM and communicates with the NDB instance. It uses port 443 for HTTPS API calls and port 9440 for Nutanix cluster API calls. These ports are required to be open on the database server VMs for NDB to function properly.

NEW QUESTION # 259

While using Time Machine (TM) to restore a source database, the option to restore data to Point in Time is not available. What should an administrator do to restore databases to Point in Time?

- A. Restore Source DB using a snapshot
- B. Create DB clone using a snapshot.
- C. Update TM SLA to BRONZE or higher.
- D. Update TM SLA to BRASS or lower.

Answer: C

Explanation:

In Nutanix Database Service (NDB), the Time Machine (TM) feature allows restores, including Point-in-Time (PIT) restores, which require continuous log retention to replay transaction logs to a specific moment. If the option to restore data to a Point in Time is unavailable, it indicates that the current Time Machine Service Level Agreement (SLA) does not support continuous log retention. NDB SLAs are categorized (e.g., BRONZE, SILVER, GOLD), with BRONZE or higher levels required to enable PIT restore by including continuous log retention. The administrator must update the TM SLA to at least BRONZE to enable this feature, ensuring logs are retained for PIT operations.

NEW QUESTION # 260

An administrator has received a request to clone a source production database to an existing development server. Which two actions must be taken to complete this task?

- A. The development server must be registered by Era in order to receive the clone.
- B. The development server must be authorized for the database Time Machine.
- C. The development server must have the IP and credentials provided during cloning.
- D. The development server must be registered by Era and authorized to host clones from the Time Machine.

Answer: A,C

Explanation:

According to the Nutanix Database Automation (NCP-DB) Learning documents, to clone a source production database to an existing development server, the following actions must be taken:

A). The development server must be registered by Era in order to receive the clone. This is because Nutanix Era is a database management tool that manages the lifecycle of databases and their copies. Registering the development server with Era allows it to manage the database on that server.

D). The development server must have the IP and credentials provided during cloning. This is necessary for Era to access the development server and perform the cloning operation. The IP address and credentials are used to establish a connection to the development server. Without these details, Era would not be able to access the server and perform the cloning operation.

NEW QUESTION # 261

An administrator would like to leverage the Oracle restore feature within NDB for a RAC database. Prior to the restoration operation, what must the administrator do?

- A. Ensure more than one node of the RAC is reachable.
- B. Ensure the database is registered with NDB.
- C. Ensure the database is in a Down state.
- D. Ensure the database is in an Up state.

Answer: B

Explanation:

To leverage the Oracle restore feature within Nutanix Database Service (NDB) for a Real Application Clusters (RAC) database, the administrator must ensure that the database is registered with NDB prior to initiating the restoration operation. Registration allows

NDB to recognize the RAC database, manage its metadata, and perform operations like restore using Time Machine snapshots or backups. Without registration, NDB cannot access the necessary configuration details or protection data, rendering the restore feature unavailable.

NEW QUESTION # 262

How long is the default continuous recovery for the Gold SLA in Era Time Machine?

- A. 90 days
- B. 60 days
- C. 15 days
- D. 30 days

Answer: D

Explanation:

The default continuous recovery for the Gold SLA in Era Time Machine is 30 days. This means that the system keeps a continuous recovery point for the last 30 days, allowing you to restore your database to any point within this period.

NEW QUESTION # 263

.....

It is universally acknowledged that the pass rate is the most persuasive evidence to prove how useful and effective a kind of NCP-DB-6.10 practice test is. In terms of our training materials, the pass rate is one of the aspects that we take so much pride in because according to the statistics from the feedbacks of all of our customers, under the guidance of our NCP-DB-6.10 Preparation materials the pass rate among our customers has reached as high as 98% to 100%, which marks the highest pass rate in the field. Just feel rest assured to buy our NCP-DB-6.10 study guide, which definitely will be the best choice for you.
