We guarantee that after purchasing our Archer-Expert exam torrent, we will deliver the product to you as soon as possible within ten minutes. So you don't need to wait for a long time and worry about the delivery time or any delay. We will transfer our Archer-Expert prep torrent to you online immediately, and this service is also the reason why our Archer-Expert Test Braindumps can win people's heart and mind. And what is more, if you study with our Archer-Expert training guide for only 20 to 30 hours, then you will be ready to take the Archer-Expert exam with confidence to pass it.

Archer Archer-Expert Exam Syllabus Topics:

Section	Weight	Objectives

Advanced Platform Administration	30%	- System configuration and optimization • 1. Server and environment setup • 2. Performance tuning and maintenance - User and access management • 1. Security and permission configuration • 2. Role-based access control design
GRC and Solution Implementation	25%	- Reporting and analytics • 1. Dashboard and metric configuration • 2. Advanced report design - Governance, Risk and Compliance frameworks • 1. Risk assessment and mitigation • 2. Regulatory compliance mapping
Troubleshooting and Advanced Features	10%	- API and advanced integration • 1. Web services and API usage • 2. Package deployment and migration - System troubleshooting and problem resolution • 1. Service and component management • 2. Log analysis and error handling
Application and Data Management	35%	- Data integration and management • 1. Data quality and consistency maintenance • 2. Data feeds and import/export - Application configuration and customization • 1. Workflow and business rules setup • 2. Data structures and fields design

New Archer-Expert Exam Objectives, Test Archer-Expert Lab Questions

Our Archer-Expert training materials are known as instant access to download, you can receive downloading link within ten minutes, and if you don't receive, you can contact us, and we will give you reply as soon as we can. Besides, Archer-Expert exam materials are high-quality, since we have a professional team to compile and review, therefore the accuracy of the answers can be guaranteed. You can enjoy the right of free update for one year if you choose us, and the latest version for Archer-Expert Exam Dumps will be sent to you automatically. You can have conversations with us through online and offline service.

Archer Certified Administrator-Expert Sample Questions (Q34-Q39):

NEW QUESTION # 34

When importing data through the Data Import Wizard, if you choose the Import Type as "Update Existing Records", which of the following is true?

- A. A number of the matching records will be updated.
- B. Matching records will be discarded and unmatched records will be added as new records.
- C. Matching records will be updated and unmatched records will be discarded.
- D. Matching records will be updated and unmatched records will be added as new records.

Answer: C

NEW QUESTION # 35

Question display rules are set up by an administrator to conditionally show or hide questions in a questionnaire. How often are these rules evaluated?

- A. Every time the target record is updated
- B. Every time the target record is saved
- C. Only when the questionnaire record is created
- **D. Every time the questionnaire record is updated**

Answer: D

Explanation:

In the Archer Questionnaire module, Display Rules function similarly to Conditional Layouts in standard applications, but they operate within the specific context of the Assessment/Questionnaire record. These rules are "active" logic. According to the Questionnaires and Assessment Maintenance curriculum, these rules are evaluated every time the questionnaire record is updated. This means as a user is actively answering questions, the system evaluates the responses in real-time. If a user selects "Yes" to a specific question, the display rule immediately triggers to show the follow-up questions. If they change it to "No," the follow-up questions are hidden. This real-time evaluation ensures a streamlined user experience, preventing the user from seeing irrelevant questions. This is distinct from a "Save" event (Option D); if the rules only evaluated on save, the user would have to constantly save the record to see the next set of questions, which would be highly inefficient.

NEW QUESTION # 36

What will happen if the source file for a Data Import contains a row missing required field content for the target application?

- A. The Data Import fails unless the row with the missing required field content is the last row in the file.
- **B. The Data Import fails without creating or updating any content records.**
- C. The Data Import logs a warning message asking the user to check the source file and processes successfully for the rest of the complete rows.
- D. An administrator must process the file using administrator override.

Answer: B

Explanation:

The Data Import tool is designed for strict adherence to application business rules. According to the Archer Administration II curriculum, required fields are mandatory for the creation of any record. If a source file contains even a single row that is missing data for a "Required" field, the validation engine will trigger an error.

Unlike the Data Feed Manager, which can be configured to "Skip" errors and continue, a standard Data Import is an "all or nothing" operation by default when it encounters critical structural failures like missing required data. The import process will stop, and no records from that file will be committed to the database.

This ensures that the application does not end up with "broken" records that bypass the logic intended by the administrator. To fix this, the administrator must either populate the missing data in the source file or temporarily make the field "Not Required" in the application builder before re-attempting the import.

NEW QUESTION # 37

Which action is recommended before updating an Archer Advanced Workflow?

- **A. Open the application and deactivate Advanced Workflow before making changes to the workflow process, then reactivate the workflow so all records update.**
- B. Add an error handling node at the end for the workflow to catch records which generate errors as a result of the update.
- C. No special action is needed since Advanced Workflow automatically returns all actively enrolled records to the Start node.
- D. Complete all active jobs before updating the Advanced Workflow.

Answer: A

Explanation:

According to the Advanced Workflow Beyond the Basics curriculum, the safest administrative practice when modifying an active

workflow is to briefly deactivate it. When you deactivate the workflow, you prevent new records from entering a potentially "in-flux" process while you are saving new versions.

Once the changes are finalized and the new version is saved, reactivating the workflow allows the system to initialize the new logic. It is important to note that reactivating the workflow does not automatically update existing records (as discussed in previous questions regarding Bulk Update Jobs), but it ensures that the transition between versions is "clean." Option D is often impossible in a production environment with thousands of active records. Option B is factually incorrect as records do not return to the Start node; they stay exactly where they were in their specific version. Deactivating ensures that the Advanced Workflow Service doesn't attempt to process a record against a design that is currently being overwritten or modified by the administrator.

NEW QUESTION # 38

Which of the following are automatically assigned by Archer when a new user is created?

- A. Username, default Security Parameter, and default Access Role
- B. One time password, Default Email Address
- C. Default Access Role, Default Email Address
- **D. Default Security Parameter and Default Access Role**

Answer: D

Explanation:

In the Manage Users section of Archer, the platform uses global defaults to ensure that new accounts are created with a baseline security posture. According to the Archer Administration II security module, every new user record is automatically assigned the Default Security Parameter and the Default Access Role defined in the instance settings.

The Security Parameter (Option D) governs password complexity, expiration, and session timeouts. The Default Access Role typically provides very limited "Read" access to ensure the user can at least log in to the workspace, but usually requires further administrative adjustment to grant functional permissions. A Username (Option A) must be manually entered or mapped from LDAP; Archer cannot guess a unique username. Similarly, email addresses and passwords require specific input or integration triggers. By automatically assigning the default Security Parameter and Access Role, Archer ensures that no user is created without essential security governance already in place.

NEW QUESTION # 39

.....

If you just free download the demos of our Archer-Expert exam questions, then you will find that every detail of our Archer-Expert study braindumps is perfect. Not only the content of the Archer-Expert learning guide is the latest and accurate, but also the displays can cater to all needs of the candidates. It is all due to the efforts of the professionals. These professionals have full understanding of the candidates' problems and requirements hence our Archer-Expert training engine can cater to your needs beyond your expectations.
