The AZ-800 Mock Exams not just give you a chance to self-access before you actually sit for the certification exam, but also help you get an idea of the Microsoft exam structure. It is well known that students who do a mock version of an exam benefit from it immensely. Some Microsoft certified experts even say that it can be a more beneficial way to prepare for the Administering Windows Server Hybrid Core Infrastructure exam than spending the same amount of time studying.

Exam Content

The next point for you to know is the exam content. The AZ-800 test consists of five topics in which you should be proficient. The first topic is the most extensive one and is dedicated to deploying and managing AD DS in on-premises and cloud environments. In this domain, you should have a good understanding of how to deploy and operate AD DS domain controllers, work in multi-domain, multi-forest, and multi-site environments, apply hybrid identities. In addition, your skills to create and operate AD DS security principals, manage Windows Server will be assessed as well.

The second topic refers to managing Windows Server and workloads in a hybrid environment. This implies that you are competent in dealing with Windows Server in a hybrid environment and Azure services to operate Windows Servers and workloads. Thus, you can demonstrate your skills to configure CredSSP, PowerShell Remoting, JEA, operate updates for Windows machines, manage Windows Servers, integrate Windows Servers with Azure Security Center or Log Analytics.

The third domain focuses on managing virtual machines and containers. The aim of this domain is to measure your abilities in working with VM memory, VM Resource Groups, VM CPU Groups, VM Checkpoints, Integration Services, NIC teaming, and Hyper-V switch. This subject area also includes the ability to create and operate containers, and operate Azure Virtual Machines based on Windows Server.

The fourth domain aims to check your skills in applying and operating an on-premises and hybrid networking infrastructure. In this domain you are expected competency in utilizing on-premises and hybrid name resolution, operating IP addressing in hybrid and on-premises scenarios, applying on-premises and hybrid network connectivity. Thus, you should possess top-notch skills to apply DNSSEC, integrate DNS with AD DS, configure DNS forwarding, operate IPAM, create IP reservations, apply Azure Network Adapter, Web App Proxy, Azure Replay.

The fifth topic refers to managing storage and file services. This part evaluates your skills in operating Azure File Sync, operating Windows Server files shares, and Windows Server storage. To deal with the questions from this domain, you need to be able to create Azure File Sync service, monitor File Sync, create cloud endpoints, BranchCache, apply DFS, configure volumes, disks, and Data Deduplication.

Microsoft AZ-800 Certification Exam is a great way for IT professionals to demonstrate their expertise in managing and maintaining

hybrid environments. Administering Windows Server Hybrid Core Infrastructure certification is recognized by employers worldwide and can help professionals advance their careers. Additionally, the skills and knowledge gained through this certification can be applied to a wide range of IT roles, including network administrators, systems administrators, and cloud architects.

NEW QUESTION # 98

You have an Azure virtual machine named VM1 that runs Windows Server

You need to configure the management of VM1 to meet the following requirements:

- * Require administrators to request access to VM1 before establishing a Remote Desktop connection.
- * Limit access to VM1 from specific source IP addresses.

* Limit access to VMI to a specific management port
What should you configure?

- A. Microsoft Defender for Cloud
- B. Azure Front Dock
- **C. a network security group (NSG)**
- D. Azure Active Directory (Azure AD) Privileged identity Management (PIM)

Answer: C

NEW QUESTION # 99

Hotspot Question

Your on-premises network contains a server named Server1 and uses an IP address space of 192.168.10.0/24.

You have an Azure virtual network that contains a subnet named Subnet1. Subnet1 uses an IP address space of 192.168.10.0/24. You need to migrate Server1 to Subnet1. You must use Azure Extended Network to maintain the existing IP address of Server1. What is the minimum number of virtual machines that you should deploy? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:
