## Salesforce Certified Data Architect Sample Questions (Q95-Q100):

### NEW QUESTION # 95

An architect is planning on having different batches to load one million Opportunities into Salesforce using the Bulk API in parallel mode. What should be considered when loading the Opportunity records?

- A. Sort batches by Name field values.
- B. Group batches by the AccountId field.
- C. Create indexes on Opportunity object text fields.
- **D. Order batches by Auto -number field.**

**Answer: D**

### NEW QUESTION # 96

Universal Containers (UC) is in the process of implementing an enterprise data warehouse (EDW). UC needs to extract 100 million records from Salesforce for migration to the EDW.

What data extraction strategy should a data architect use for maximum performance?

- A. Use the Bulk API in parallel mode.
- B. Install a third-party AppExchange tool.
- C. Call the REST API in successive queries.
- **D. Utilize PK Chunking with the Bulk API.**

**Answer: D**

### NEW QUESTION # 97

Northern Trail outfitters in migrating to salesforce from a legacy CRM system that identifies the agent relationships in a look-up table. What should the data architect do in order to migrate the data to Salesforce?

- A. Assign record owner based on relationship.
- B. Migrate to Salesforce without a record owner.
- **C. Create custom objects to store agent relationships.**
- D. Migrate the data and assign to a non-person system user.

**Answer: C**

Explanation:

The correct answer is A. To migrate the data to Salesforce, the data architect should create custom objects to store agent relationships. This will allow the data architect to replicate the look-up table structure from the legacy CRM system and maintain the relationship data in Salesforce. Option B is incorrect because migrating to Salesforce without a record owner will cause errors and prevent the data from being imported. Option C is incorrect because assigning record owner based on relationship will not preserve the agent relationships from the legacy CRM system. Option D is incorrect because migrating the data and assigning to a non-person system user will not allow the users to access and modify the data.

### NEW QUESTION # 98

Universal Containers (UC) is migrating from an on-premise homegrown customer relationship management (CRM) system- During

analysis, UC users highlight a pain point that there are multiple versions of many customers. What should the data architect do for a successful migration to mitigate the pain point?

- A. Have the users manually clean the data in the old system prior to migration.
- B. Hire an intern manually de-duplicate the records after migrating to Salesforce.
- C. Migrate the data as is, and use Salesforce's de-duplicating feature.
- **D. Store the data in a staging database, and de-duplicate identical records.**

**Answer: D**

#### NEW QUESTION # 99

Universals Containers' system administrators have been complaining that they are not able to make changes to its users' record, including moving them to new territories without getting "unable to lock row" errors. This is causing the system admins to spend hours updating user records every day.

What should the data architect do to prevent the error?

- A. Reduce number of users updated concurrently.
- B. Increase CPU for the Salesforce org.
- C. Analyze Splunk query to spot offending records.
- **D. Enable granular locking.**

**Answer: D**
