Most IT workers prefer to choose our online test engine for their Fire-Inspector-II exam prep because online version is more flexible and convenient. With the help of our online version, you can not only practice our Fire-Inspector-II Exam PDF in any electronic equipment, but also make you feel the atmosphere of Fire-Inspector-II actual test. The exam simulation will mark your mistakes and help you play well in Fire-Inspector-II practice test.

In modern society, innovation is of great significance to the survival of a company. The new technology of the Fire-Inspector-II study materials is developing so fast. So the competitiveness among companies about the study materials is fierce. Luckily, our company masters the core technology of developing the Fire-Inspector-II study materials. No company in the field can surpass us. So we still hold the strong strength in the market. At present, our Fire-Inspector-II study materials have applied for many patents. We attach great importance on the protection of our intellectual property. What is more, our research center has formed a group of professional experts responsible for researching new technology of the Fire-Inspector-II Study Materials. The technology of the Fire-Inspector-II study materials will be innovated every once in a while. As you can see, we never stop innovating new version of the Fire-Inspector-II study materials. We really need your strong support.

Fire-Inspector-II Latest Test Format | New Fire-Inspector-II Test Preparation

As job seekers looking for the turning point of their lives, it is widely known that the workers of recruitment is like choosing apples--viewing resumes is liking picking up apples, employers can decide whether candidates are qualified by the Fire-Inspector-II appearances, or in other words, candidates' educational background and relating Fire-Inspector-II professional skills. The reason why we are so confident lies in the sophisticated expert group and technical team we have, which do duty for our solid support. They develop the Fire-Inspector-II Exam Guide targeted to real exam. The wide coverage of important knowledge points in our Fire-Inspector-II latest braindumps would be greatly helpful for you to pass the exam.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q34-Q39):

NEW QUESTION # 34

What is the maximum travel distance to an exit from within a tent?

- A. Any distance approved by the chief
- B. 75 ft.
- C. 150 ft.
- D. 100 ft.

Answer: C

Explanation:

The maximum travel distance to an exit from within a tent is regulated under the 2021 International Fire Code (IFC), Section 3103.12.2 - Means of Egress (Tents and Membrane Structures).

IFC Section 3103.12.2 - Travel Distance:

"The maximum travel distance to an exit shall not exceed 150 feet (45,720 mm)." Why Other Options Are Incorrect?

A: 75 ft. - This limit does not apply to tents; the correct limit is 150 ft.

B: 100 ft. - Too restrictive; the IFC allows up to 150 ft.

D: Any distance approved by the chief. - The fire code does not allow unlimited travel distances; 150 feet is the maximum permitted by code.

NEW QUESTION # 35

An acceptance test for a fire alarm system in a new apartment building should be scheduled after:

- A. the contractor verifies full compliance.
- B. each zone is completed.
- C. the system has been installed and operating for one year.
- D. the hydrostatic test of the underground main is completed.

Answer: A

Explanation:

IFC Section 901.5 (Acceptance Tests) requires fire protection systems, including fire alarms, to be tested upon completion to ensure compliance with NFPA 72 (National Fire Alarm and Signaling Code) and the IFC. The contractor's verification of full compliance (B) signals readiness for the official acceptance test by the fire code official, ensuring all components are installed and functional.

Option A (zone-by-zone testing) is impractical for final acceptance. Option C ties the test to water supply, irrelevant to alarms.

Option D (one year) is excessive and not required by IFC or NFPA 72 for initial acceptance. Thus, B is correct.

Reference: IFC 2021, Section 901.5 (Acceptance Tests), NFPA 72.

NEW QUESTION # 36

Compressed natural gas (CNG) motor vehicle fuel-dispensing equipment may be installed in which of the following locations?

- A. 40 ft. from trolley wires.
- B. 15 ft. from a public street.
- C. 20 ft. from a railroad track.
- D. 5 ft. from an undeveloped property line.

Answer: C

Explanation:

Compressed Natural Gas (CNG) motor vehicle fuel-dispensing equipment installation requirements are outlined in 2021 International Fire Code (IFC) Section 2208 - Compressed Natural Gas Motor Fuel- Dispensing Facilities.

IFC 2021, Section 2208.3 - Equipment Location and Protection:

Requires that CNG dispensing equipment be installed at least:

10 feet from property lines

20 feet from public streets, highways, sidewalks, or railroads

10 feet from buildings or structures

Why Other Options Are Incorrect?

A). 40 ft. from trolley wires.

The IFC does not specify a 40-ft requirement for trolley wires in relation to CNG fuel-dispensing equipment.

B). 15 ft. from a public street.

Incorrect because IFC 2208.3 states that the minimum required distance from a public street is 20 feet, not 15 feet.

D). 5 ft. from an undeveloped property line.

Incorrect, as the minimum clearance from any property line is 10 feet, not 5 feet.

Correct answer: C. 20 ft. from a railroad track.

NEW QUESTION # 37

A container in a clean-agent extinguishing system must be refilled or replaced when it shows a loss in original weight of more than five percent, or a loss in original pressure of more than ____ percent.

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

A container in a clean-agent extinguishing system must be refilled or replaced if it experiences a loss of more than 5% of its original weight or a loss in original pressure of more than 3%. This requirement ensures the system maintains sufficient agent concentration for fire suppression.

Reference to Fire Inspector Documentation:

1. NFPA 2001 - Standard on Clean Agent Fire Extinguishing Systems (2022 Edition) NFPA 2001, Section 7.3.2.1 states that a container must be refilled or replaced if the weight loss exceeds 5% or the pressure loss exceeds 3% from the original fill pressure.

These limits are set to maintain system effectiveness and ensure that a clean-agent system can properly discharge in case of a fire.

2. 2021 International Fire Code (IFC) - Chapter 9 (Fire Protection Systems) IFC 904.10 requires that clean-agent systems be maintained per NFPA 2001 to ensure reliability.

Detailed Explanation of Answer Choices:

Option A (Correct): 3% pressure loss is the correct threshold beyond which a container must be replaced or refilled.

Option B (Incorrect): While 5% is correct for weight loss, it is not the correct value for pressure loss.

Option C (Incorrect): A 10% pressure loss is too high and would compromise system performance before reaching the replacement threshold.

Option D (Incorrect): 12% is well beyond the acceptable loss limit and would pose a significant safety risk.

Thus, the correct and verified answer is: A. 3

NEW QUESTION # 38

The maximum quantity of liquefied petroleum gas (LP-gas) in containers stored by a dealer awaiting resale, and are at one location in a building that is not accessible to the public, is ___ lb. water capacity.

- A. 1,000
- **B. 2,000**
- C. 2,500
- D. 0

Answer: B

Explanation:

The storage of liquefied petroleum gas (LP-gas) in containers by dealers awaiting resale is regulated by the 2021 International Fire Code (IFC), Section 6109 - Storage of Portable LP-Gas Containers.

IFC 6109.11 - Storage Within Buildings Not Accessible to the Public:

"Storage of LP-gas containers in buildings that are not accessible to the public shall be limited to a maximum aggregate quantity of 2,000 pounds water capacity at one location." Why Other Options Are Incorrect?

- A). 735 lb. - Too low; the maximum allowed is 2,000 lb.
- B). 1,000 lb. - Incorrect; IFC allows up to 2,000 lb.
- D). 2,500 lb. - Exceeds the 2,000 lb. maximum permitted storage quantity.

Correct answer: C. 2,000 lb.

NEW QUESTION # 39

.....

If you want to pass the exam with the shortest time, choosing us, we will achieve this for you. Our Fire-Inspector-II study materials contain the knowledge points you need to learn, through the practicing, and you will master the Fire-Inspector-II exam dumps. You just need to spend 48 to 72 hours on studying, and you can pass the exam. Fire-Inspector-II Study Materials are of high-quality, since the experienced professionals compile them, and they were quite familiar with the questions types of the exam centre.
