With limited time for your preparation, many exam candidates can speed up your pace of making progress. Our Cybersecurity-Practitioner study materials will remedy your faults of knowledge understanding. As we know, some people failed the exam before, and lost confidence in this agonizing exam before purchasing our Cybersecurity-Practitioner training guide. Also it is good for releasing pressure. Many customers get manifest improvement and lighten their load with our Cybersecurity-Practitioner exam braindumps. So just come and have a try!

Palo Alto Networks Cybersecurity-Practitioner Exam Syllabus Topics:

Section	Objectives
Network Security Fundamentals	- NAT (Network Address Translation) - Traffic inspection and policy enforcement - IPsec VPN and GlobalProtect
Cybersecurity Landscape	- Modern threat landscape and attack vectors - Cybersecurity principles and terminology
Cloud Security	- Deployment in public/private clouds - Cloud security concepts
Endpoint Security	- IoT Security - Endpoint protection technologies
Security Operations	- Log management and monitoring - Incident response basics

Trustworthy Cybersecurity-Practitioner Practice - Exam Cybersecurity-

Practitioner Reference

Cybersecurity-Practitioner study guide can bring you more than you wanted. After you have used our products, you will certainly have your own experience. Now let's take a look at why a worthy product of your choice is our Cybersecurity-Practitioner actual exam. Firstly, with a high pass rate of 98% to 100%, you will get the pass guarantee from our Cybersecurity-Practitioner Practice Engine. Secondly, the price of our Cybersecurity-Practitioner learning guide is quite favourable than the other websites'.

Palo Alto Networks Cybersecurity Practitioner Sample Questions (Q121-Q126):

NEW QUESTION # 121

In which phase of the cyberattack lifecycle do attackers establish encrypted communication channels back to servers across the internet so that they can modify their attack objectives and methods?

- A. installation
- **B. command and control**
- C. actions on the objective
- D. exploitation

Answer: B

Explanation:

Command and Control: Attackers establish encrypted communication channels back to command-and-control (C2) servers across the internet so that they can modify their attack objectives and methods as additional targets of opportunity are identified within the victim network, or to evade any new security countermeasures that the organization may attempt to deploy if attack artifacts are discovered.

NEW QUESTION # 122

Which two pieces of information are considered personally identifiable information (PII)? (Choose two.)

- **A. Name**
- B. Profession
- C. Login ID
- **D. Birthplace**

Answer: A,D

Explanation:

Personally identifiable information (PII) is any data that can be used to identify someone. All information that directly or indirectly links to a person is considered PII¹. Among PII, some pieces of information are more sensitive than others. Sensitive PII is sensitive information that directly identifies an individual and could cause significant harm if leaked or stolen². Birthplace and name are examples of sensitive PII, as they can be used to distinguish or trace an individual's identity, either alone or when combined with other information³. Login ID and profession are not considered sensitive PII, as they are not unique to a person and do not reveal their identity. Login ID is a non-sensitive PII that is easily accessible from public sources, while profession is not a PII at all, as it does not link to a specific individual⁴. Reference:

1: What is PII (personally identifiable information)? - Cloudflare

2: What is Personally Identifiable Information (PII)? | IBM

3: personally identifiable information - Glossary | CSRC

4: What Is Personally Identifiable Information (PII)? Types and Examples

NEW QUESTION # 123

Which network device breaks networks into separate broadcast domains?

- **A. Router**
- B. Layer 2 switch
- C. Wireless access point
- D. Hub

Answer: A

Explanation:

A layer 2 switch will break up collision domains but not broadcast domains. To break up broadcast domains you need a Layer 3 switch with vlan capabilities.

NEW QUESTION # 124

Which of the Cloud-Delivered Security Services (CDSS) will detect zero-day malware by using inline cloud machine learning (ML) and sandboxing?

- A. IoT security
- B. DNS security
- **C. Advanced WildFire**
- D. Advanced Threat Prevention

Answer: C

Explanation:

Advanced WildFire is a Cloud-Delivered Security Service (CDSS) that detects zero-day malware using inline cloud machine learning (ML) and sandboxing techniques. It analyzes unknown files in real-time to identify and block new threats before they can cause harm.

NEW QUESTION # 125

Which security component can detect command-and-control traffic sent from multiple endpoints within a corporate data center?

- A. Stateless firewall
- B. Personal endpoint firewall
- **C. Next-generation firewall**
- D. Port-based firewall

Answer: C

Explanation:

A next-generation firewall (NGFW) is a security component that can detect command-and-control (C2) traffic sent from multiple endpoints within a corporate data center. A NGFW is a network device that combines traditional firewall capabilities with advanced features such as application awareness, intrusion prevention, threat intelligence, and cloud-based analysis. A NGFW can identify and block C2 traffic by inspecting the application layer protocols, signatures, and behaviors of the network traffic, as well as correlating the traffic with external sources of threat intelligence. A NGFW can also leverage inline cloud analysis to detect and prevent zero-day C2 threats in real-time. A NGFW can provide granular visibility and control over the network traffic, as well as generate alerts and reports on the C2 activity. Reference:
