Top Test XSOAR-Engineer Cram Review - Pass XSOAR-Engineer in One Time - Excellent Latest XSOAR-Engineer Exam Tips

With our excellent XSOAR-Engineer exam questions, you can get the best chance to obtain the XSOAR-Engineer certification to improve yourself, for better you and the better future. With our XSOAR-Engineer training guide, you are acknowledged in your profession. The XSOAR-Engineer exam braindumps can prove your ability to let more big company to attention you. Then you have more choice to get a better job and going to suitable workplace. Why not have a try on our XSOAR-Engineer Exam Questions, you will be pleasantly surprised our XSOAR-Engineer exam questions are the best praparation material.

Palo Alto Networks XSOAR Engineer Sample Questions (Q26-Q31):

NEW QUESTION # 26
Which Marketplace content pack will allow sharing of threat intelligence in STIX format?.

- A. Generic Export Indicators Service.
- B. External dynamic list.
- C. MISP Server.
- D. TAXII Server.

Answer: D

Explanation:
STIX/TAXII are industry-standard protocols for structured threat intelligence exchange. According to the Threat Intelligence section of the XSOAR documentation, TAXII servers and clients provide automated bidirectional sharing using STIX objects, supporting both ingestion and distribution of indicators, observables, relationships, and threat objects.

The TAXII Server content pack specifically enables an organization to expose its threat intelligence via a TAXII 2.0/2.1 compliant endpoint, where the transmitted data is formatted as STIX, making it the correct choice for sharing structured intelligence externally. The Generic Export Indicators Service pack supports indicator export, but not in STIX format-it exports simple CSV, JSON, or list-based formats. MISP Server supports STIX ingestion and export but is considered a MISP-specific implementation and not the generic STIX distribution mechanism expected in the question.

External dynamic lists are not related to STIX or TAXII at all.

Thus, the correct answer is D, as only the TAXII Server pack is designed explicitly for STIX-formatted intelligence sharing.

NEW QUESTION # 27
Which two features can be used together to automatically execute a search on a remote SIEM for extracted IP Indicators? (Choose two.).

- A. Reputation script.
- B. Enhancement script.
- C. Feed-triggered job.
- D. Integration command.

Answer: C,D

Explanation:
XSOAR automates indicator-driven actions through various trigger types. To execute a search automatically on a remote SIEM when new IP indicators are extracted, two components are needed:
* Feed-triggered job (D)- The Admin Guide explains that jobs can be triggered when a feed updates.
When new indicators are fetched, a feed-triggered job can automatically start a playbook.
* Integration command (C)- The playbook executed by the job can call SIEM integration commands (such as siem-search, query-log, or custom search commands). These commands send API queries to the remote SIEM and return event/log results.
Reputation scripts (option A) evaluate or enrich indicators but do not execute SIEM searches. Enhancement scripts (option B) add contextual data to indicators but not remote searches.
Thus, the correct pair supported by XSOAR automation architecture is:
#Integration Command to perform the SIEM query
+
#Feed-Triggered Job to automatically initiate the action when new IP indicators appear.
This reflects XSOAR's feed-driven automation workflow.

NEW QUESTION # 28
Threat Intel search queries can be shared with which of the following? (Select 1)

- A. Users outside XSOAR via email invite
- B. Other organizations via the Marketplace
- C. Users defined in the platform (email or username)
- D. Roles defined in the platform

Answer: B

NEW QUESTION # 29
When uploading content, which two options could the upload include? (Choose two.)

- A. Indicators
- B. Reports
- C. Fields
- D. Incidents

Answer: A,D

NEW QUESTION # 30
Which two reasons would lead an engineer to create a custom widget? (Choose two.)

- A. To visualize XSOAR list data
- B. To visualize context data
- C. To visualize complex incident data calculations
- D. To visualize server configuration keys
- E. To visualize a custom query

Answer: B,E
