CompTIA 220-1101 Questions - 220-1101 PDF Dumps [2026]

All the 220-1101 training files of our company are designed by the experts and professors in the field. The quality of our study materials is guaranteed. According to the actual situation of all customers, we will make the suitable study plan for all customers. If you buy the 220-1101 Learning Materials from our company, we can promise that you will get the professional training to help you pass your 220-1101 exam easily. By our professional training, you will pass your 220-1101 exam and get the related certification in the shortest time.

CompTIA A+ Certification Exam: Core 1 covers a wide range of topics, including hardware, software, networking, and security. 220-1101 Exam is divided into two parts: Core 1 and Core 2. Core 1 focuses on computer hardware and software, while Core 2 covers advanced topics such as networking, security, and troubleshooting.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q203-Q208):

NEW QUESTION # 203

Which of the following resolutions is commonly known as Ultra HD?

- A. 3840x2160
- B. 7680x4320
- C. 1920x1080
- D. 2048x1080

Answer: A

Explanation:

Ultra HD (UHD), also referred to as 4K UHD, has a resolution of 3840x2160. It's four times the resolution of standard 1080p (Full HD), offering more screen real estate and sharper images.

- * Option A (1920x1080): Full HD (FHD), not UHD.
- * Option B (2048x1080): DCI 2K - used in cinema, not common for Ultra HD.
- * Option D (7680x4320): Known as 8K UHD, not standard Ultra HD.

CompTIA A+ Core 1 Exam Objective Reference:

- * Objective 1.7: Compare and contrast display technologies and their features.

NEW QUESTION # 204

Which of the following utilizes TCP ports 20/21 and transfers data in cleartext?

- A. Telnet
- B. SNMP
- C. FTP
- D. SSH

Answer: C

Explanation:

Explanation

FTP (File Transfer Protocol) uses TCP ports 20/21 and transfers data in cleartext, which means the data is not encrypted and can be read by anyone who intercepts it. This makes FTP insecure for transferring sensitive information. SSH (Secure Shell), on the other hand, uses port 22 and encrypts data, making it more secure.

SNMP (Simple Network Management Protocol) uses ports 161/162 and is used to monitor network devices.

Telnet uses port 23 and transfers data in cleartext, making it insecure. References: CompTIA A+ Certification Exam Core 1 - Page 199

NEW QUESTION # 205

An IT specialist sets up a wireless router in a SOHO environment. Afterwards, several devices cannot access the internet and are assigned IP addresses starting with 169.254. Which of the following is the best action to resolve this issue?

- A. Reboot the wireless router.
- B. Shorten the lease time.
- C. Use static IP addresses.
- D. Increase the DHCP pool size.

Answer: A

Explanation:

An IP address beginning with 169.254 indicates that the device has not received a valid IP from the DHCP server. Rebooting the router can resolve minor configuration or network glitches, allowing DHCP to function correctly. The other options, such as adjusting lease time or static IP addresses, do not address the core problem. CompTIA A+ Core 1 objectives emphasize DHCP troubleshooting in SOHO networks.

NEW QUESTION # 206

A small ISP has hired a new technician Joe, the new technician, is being trained to configure customers' home networks. The training instructor gives the technician a starter kit with cables, cable ends, and other network equipment and asks him to build a working network.

The computer should be connected to have internet connectivity and the phone should be connected to have a dial tone.

INSTRUCTIONS

Use the appropriate cables, cable ends, tools and equipment to configure the network and connect all components accordingly. There are 3 steps and the simulation starts on step 1.

⋮

Answer:

Explanation:

See the answer below in explanation part.

Explanation:

Answer of both steps below.

NEW QUESTION # 207

A user is traveling to another country and will be unable to get personal cell phone service after the plane lands. Which of the following should the user update to resolve the issue?

- A. PRL
- B. CDMA
- C. GPS
- D. MDM

Answer: A

Explanation:

Updating the preferred roaming list (PRL) is what a user should do to resolve the issue of being unable to get personal cell phone service after traveling to another country. The PRL is a database that contains information about cell towers and frequencies that a phone can use in different areas. Updating the PRL can improve the phone's ability to connect to local networks and avoid roaming charges. CDMA is a type of cellular technology that uses code division multiple access to transmit data over radio frequencies.

MDM is an acronym for mobile device management, which is a type of software solution that allows remote management and security of mobile devices. GPS is an acronym for global positioning system, which is a satellite-based navigation system that provides location and time information.
