

2026 Salesforce Mule-Dev-201: Salesforce Certified MuleSoft Developer Fantastic Reliable Dumps Sheet

BONUS!!! Download part of DumpsActual Mule-Dev-201 dumps for free: https://drive.google.com/open?id=1b_4GlfolJK9a_1uuSFt56OC7n-Llfl1F

Additionally, DumpsActual offers 12 months of free Salesforce Mule-Dev-201 exam questions so that our customers prepare with the latest Salesforce Mule-Dev-201 material. Perhaps the most significant concern for Salesforce Mule-Dev-201 Certification Exam candidates is the cost. Salesforce Mule-Dev-201 certification exam requires expensive materials, classes, and even flights to reach the exam centers.

Salesforce Mule-Dev-201 Exam Syllabus Topics:

Section	Weight	Objectives
Topic 1: Building API Implementations	10%	- Use connectors to integrate systems - Implement APIs from specifications - Implement routing and transformation logic
Topic 2: Security and Governance	7%	- Enforce governance standards - Apply security policies - Manage access and authentication
Topic 3: Data Transformation with DataWeave	10%	- Write expressions and functions - Handle different data formats - Transform complex data structures
Topic 4: Designing APIs	8%	- Define API specifications with RAML - Define parameters, responses and data types - Use REST API methods and resources
Topic 5: Accessing and Modifying Mule Events	10%	- Access and modify payload, attributes and variables - Use DataWeave for transformation - Enrich events using connectors
Topic 6: Testing and Debugging	10%	- Debug applications using Anypoint Studio - Use mocking and test doubles - Write unit tests with MUnit
Topic 7: Deploying and Managing Applications	10%	- Explain deployment models - Monitor and manage applications - Deploy to CloudHub and on-premises
Topic 8: Creating Application Networks	7%	- Identify application network concepts - Describe Anypoint Platform components - Explain API-led connectivity principles
Topic 9: Structuring Mule Applications	10%	- Use flows, subflows and flow references - Organize configurations and properties - Manage error handling and scopes

Topic 10: Error Handling and Transactions	8%	- Implement transaction management - Handle retries and dead-letter queues - Configure error handlers

Salesforce Mule-Dev-201 Latest Braindumps Sheet | Mule-Dev-201 Positive Feedback

DumpsActual offers 100% secure online purchase at all the time. We offer payments through Paypal-one of the most trusted payment providers which can ensure the safety shopping for Mule-Dev-201 study torrent. Besides, before you choose our material, you can try our Mule-Dev-201 free demo questions to check if it is valuable for you to buy our Mule-Dev-201 practice dumps. You will get the latest and updated study dumps within one year after your purchase. So, do not worry the update and change in the actual test, you will be confident in the real test with the help of our Mule-Dev-201 training torrent.

Salesforce Certified MuleSoft Developer Sample Questions (Q202-Q207):

NEW QUESTION # 202

Refer to the exhibits.

What DataWeave expression transforms the conductorIds array to the XML output?

- A. 1. 1. trains:2. 2.conductorIds map ((engId, index) ->3. 3. train: {4. 4. engineerId: engId5. 5. }6. 6.)
- B. 1. 1. trains:2. 2. {(3. 3. conductorIds map ((engId, index) ->4. 4. train: {5. 5. engineerId: engId6. 6. }7. 7.)8. 8.)}
- C. 1. 1. { trains:2. 2.3. 3. conductorIds map ((engId, index) ->4. 4. train: {5. 5. engineerId: engId6. 6. }7. 7.)8. 8. }
- D. 1. 1. {(trains:2. 2.3. 3. conductorIds map ((engId, index) ->4. 4. train: {5. 5. engineerId: engId6. 6. }7. 7.)8. 8.)}

Answer: B

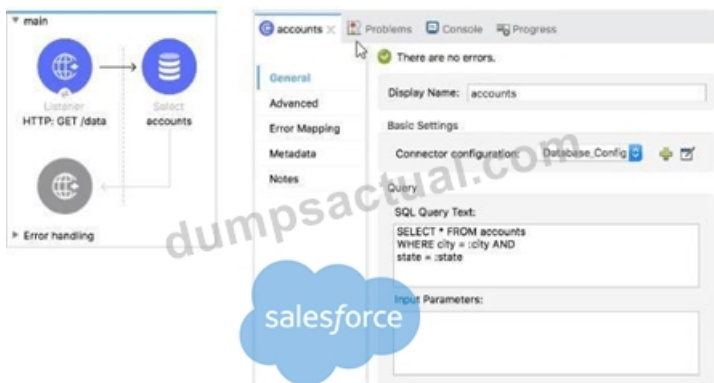

Explanation:

Points to remember:

- * XML must have a root element.
 - * XML only allows one root element
 - * To avoid multiple root issues, you must create a root element for the XML output, whenever we transform output
 - * When mapping array elements (JSON or JAVA) to XML, wrap the map operations in {(..)}
 - { } are defining the object
 - () are transforming each element in the array as a key/value pair
 - * The transformation to XML would fail if the above mentioned considerations were not taken into account.
 - * Thus the transformation script declares a root element as trains and wraps the data in "{()}".
- Whenever you see such type of question, always look out for root element followed by {() } wrapping map. I call this a "Wrap The Map" scenario. Hope it would help you remember !

NEW QUESTION # 203

Refer to the exhibit.

What expression correctly specifies input parameters to pass the city and state values to the SQL query?

- A.

```
#[
  {
    city: "San Francisco",
    state: "CA"
  }
]
```
- B.

```
#[
  inputParams: {
    city: "San Francisco",
    state: "CA"
  }
]
```
- C.

```
#[
  [
    "San Francisco",
    "CA"
  ]
]
```
- D.

```
#[
  inputParams: [
    "San Francisco",
    "CA"
  ]
]
```

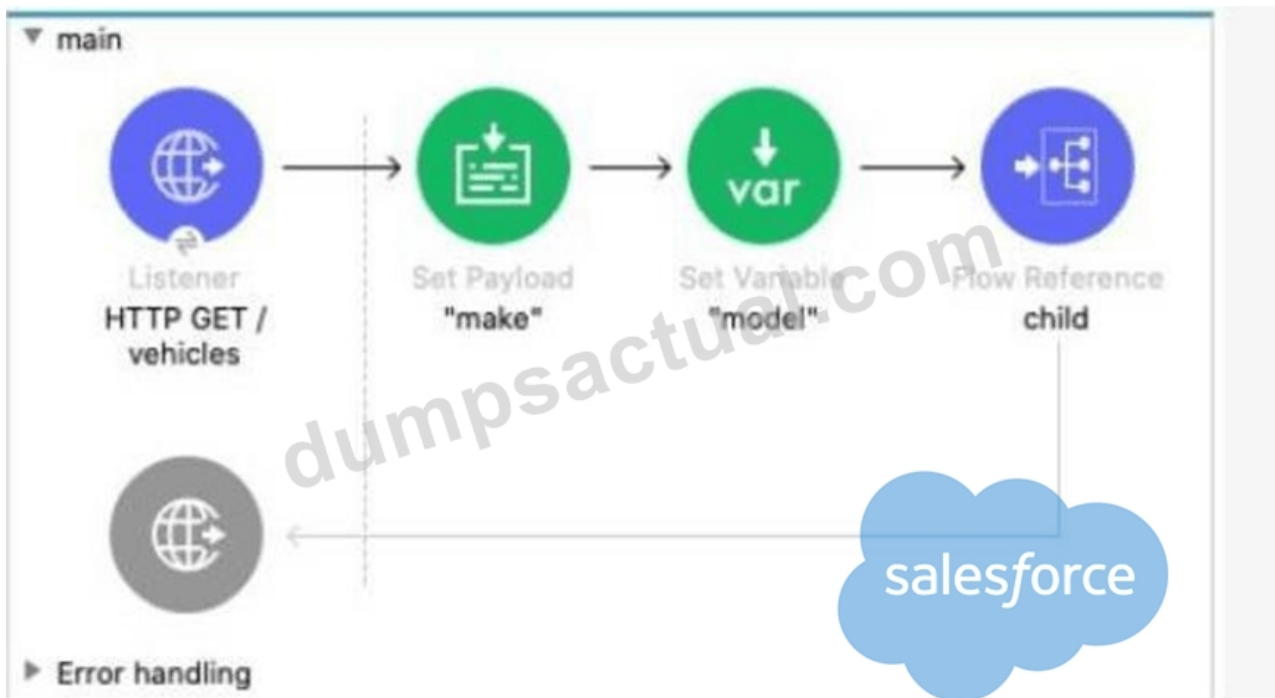

Answer: A

Explanation:

MuleSoft Documentation Reference : <https://docs.mulesoft.com/db-connector/1.9/database-connector-select>

NEW QUESTION # 204

Refer to the exhibits.

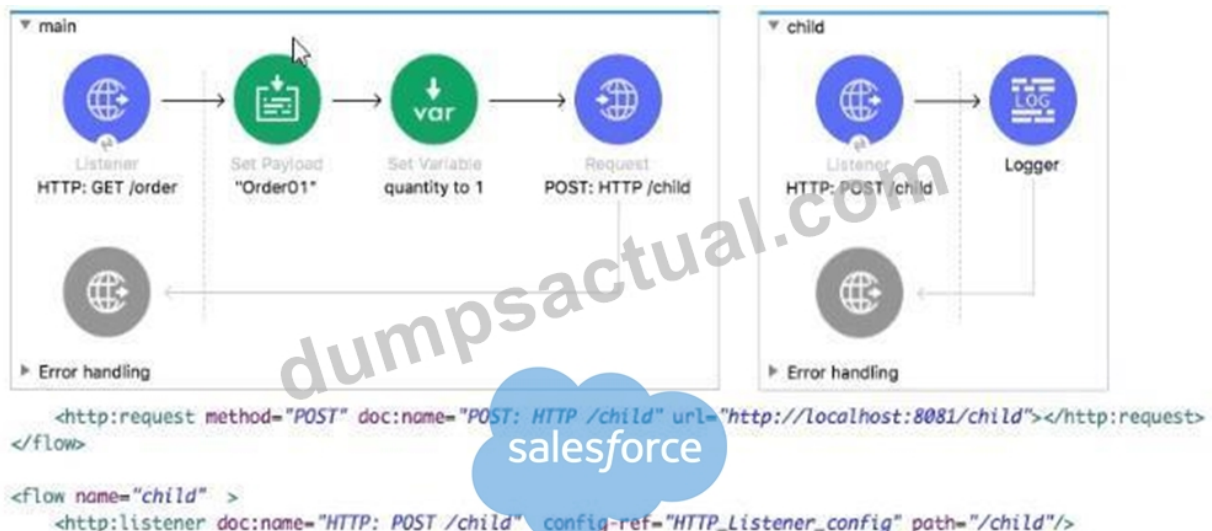

The main flow contains a Flow Reference component configured to call the child flow. What part(s) of a Mule event passed to the Flow Reference component are available in the child flow?

- A. The payload
- B. The entire Mule event
- C. The payload and all variables
- D. The payload and all attributes

Answer: C

NEW QUESTION # 205

Refer to the exhibits.

The main flow contains an HTTP Request. The HTTP Listeners and HTTP Request use default configurations.

What

values are accessible in the child flow after a web client submits a request to <http://localhost:8081/order?color=red>?

- A. payloadquantity var
- B. payloadquantity var color query param
- C. payloadcolor query param
- **D. payload**

Answer: D

NEW QUESTION # 206

As a part of project requirement, you want to build an API for a legacy client. Legacy client can only consume SOAP webservice. Which type the interface documentation can be prepared to meet the requirement?

- A. JSON file
- B. RAML file to define SOAP services
- **C. WSDL file**
- D. plain text file documenting API's

Answer: C

Explanation:

Web Services Description Language. WSDL is used to describe SOAP based web services
