P.S. Free & New HPE7-A07 dumps are available on Google Drive shared by VCE4Plus: [https://drive.google.com/open?id=1wvIH7EHp1\\_LlbMsDZHAjo-eroWvegftv](https://drive.google.com/open?id=1wvIH7EHp1_LlbMsDZHAjo-eroWvegftv)

Regarding the process of globalization, every fighter who seeks a better life needs to keep pace with its tendency to meet challenges. HPE7-A07 certification is a stepping stone for you to stand out from the crowd. Nowadays, having knowledge of the HPE7-A07 study braindumps become widespread, if you grasp solid technological knowledge, you are sure to get a well-paid job and be promoted in a short time. According to our survey, those who have passed the exam with our HPE7-A07 Test Guide convincingly demonstrate their abilities of high quality, raise their professional profile, expand their network and impress prospective employers.

If you are lack of skills in the preparation of getting the certification, our HPE7-A07 study materials are the best choice for you. Many people have successfully realized economic freedom after getting the HPE7-A07 certificate and changing a high salary job. So you need to act from now, come to join us and struggle together. Our HPE7-A07 Study Materials will help you change into social elite and you will never feel disappointed.

## Reliable HPE7-A07 Exam Simulations, Associate HPE7-A07 Level Exam

The HPE7-A07 PDF file contains the real, valid, and updated HP HPE7-A07 exam practice questions. These are the real HPE7-

A07 exam questions that surely will appear in the upcoming exam and by preparing with them you can easily pass the final exam. The HPE7-A07 PDF Questions file is easy to use and install. You can use the HPE7-A07 PDF practice questions on your laptop, desktop, tabs, or even on your smartphone and start HP exam preparation right now.

## HP HPE7-A07 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Connectivity: The topic covers developing configurations, applying advanced networking technologies, and identifying design flaws. It tests the skills of a senior HP RF network engineer in creating reliable, high-performing networks tailored to specific customer needs.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Security: This topic evaluates the ability of a senior HP RF network engineer to design and troubleshoot security implementations, focusing on wireless SSID with EAP-TLS and GBP. It ensures the network is secure from unauthorized access and threats.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Performance Optimization: The Aruba Certified Campus Access Mobility Expert Written exam focuses on analyzing and remediating performance issues within a network. It measures the ability of a senior RF network engineer to fine-tune network operations for maximum efficiency and speed.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Switching: Senior HP RF network engineers must demonstrate proficiency in implementing and troubleshooting Layer 2</li> <li>3 switching, including broadcast domains and interconnection technologies. This ensures seamless and efficient data flow across network segments.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>WLAN: This HP HPE7-A07 Exam Topic tests the ability of a senior RF network engineer to design and troubleshoot RF attributes and wireless functions. It also includes building and troubleshooting wireless configurations, critical for optimizing WLAN performance in enterprise environments.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>Troubleshooting: This topic of the HP HPE7-A07 exam assesses skills of a senior HP RF network engineer in troubleshooting. It also assesses the ability to remediate issues in campus networks. It is vital for ensuring network reliability and minimizing downtime in critical environments.</li> </ul>

## HP Aruba Certified Campus Access Mobility Expert Written Exam Sample Questions (Q63-Q68):

### NEW QUESTION # 63

Refer to the exhibit.

Time	Channel	Transmitter	Receiver	Info	Data Rate
20:05:20.702391	36	92:54:74:41:f9:ff	Broadcast	Probe Request, SN=1057, FN=0, Flags=.....C, SSID="Aruba"	6.0
20:05:20.703463	36	8c:88:2b:20:01:ac	92:54:74:41:f9:ff	Probe Response, SN=1906, FN=0, Flags=.....C, BI=100, SSID="Aruba"	6.0
20:05:20.761599	36	92:54:74:41:f9:ff	8c:88:2b:20:01:ac	Authentication, SN=1058, FN=0, Flags=.....C	6.0
20:05:20.761601	36	92:54:74:41:f9:ff	92:54:74:41:f9:ff	Acknowledgement, Flags=.....C	6.0

20:05:20.765851	36	8c:88:2b:20:01:ac	92:54:74:41:f9:ff	Association Response, SN=1908, FN=0, Flags=.....C	6.0
20:05:21.000518	36	8c:88:2b:20:01:ac	92:54:74:41:f9:ff	Key (Message 1 of 4)	6.0
20:05:21.006655	36	92:54:74:41:f9:ff	8c:88:2b:20:01:ac	Key (Message 2 of 4)	6.0
20:05:21.006657	36	92:54:74:41:f9:ff	92:54:74:41:f9:ff	Acknowledgement, Flags=.....C	6.0
20:05:21.006162	36	8c:88:2b:20:01:ac	92:54:74:41:f9:ff	Key (Message 1 of 4)	6.0
20:05:21.007434	36	92:54:74:41:f9:ff	8c:88:2b:20:01:ac	Key (Message 2 of 4)	6.0
20:05:21.007444	36	92:54:74:41:f9:ff	92:54:74:41:f9:ff	Acknowledgement, Flags=.....C	6.0
20:05:22.006245	36	8c:88:2b:20:01:ac	92:54:74:41:f9:ff	Key (Message 1 of 4)	6.0
20:05:22.008252	36	92:54:74:41:f9:ff	8c:88:2b:20:01:ac	Key (Message 2 of 4)	6.0
20:05:22.008256	36	92:54:74:41:f9:ff	92:54:74:41:f9:ff	Acknowledgement, Flags=.....C	6.0
20:05:23.006700	36	8c:88:2b:20:01:ac	92:54:74:41:f9:ff	Key (Message 1 of 4)	6.0
20:05:23.008237	36	92:54:74:41:f9:ff	8c:88:2b:20:01:ac	Key (Message 2 of 4)	6.0
20:05:23.008243	36	92:54:74:41:f9:ff	92:54:74:41:f9:ff	Acknowledgement, Flags=.....C	6.0
20:05:24.007246	36	8c:88:2b:20:01:ac	92:54:74:41:f9:ff	Deauthentication, SN=1953, FN=0, Flags=.....C	6.0
20:05:24.050908	36	92:54:74:41:f9:ff	8c:88:2b:20:01:ac	Deauthentication, SN=1060, FN=0, Flags=.....C	6.0
20:05:24.050911	36	92:54:74:41:f9:ff	92:54:74:41:f9:ff	Acknowledgement, Flags=.....C	6.0

Which statement is true?

- A. The client is failing 802.1X authentication
- B. The client is using BSS Fast Transition
- C. The client performed passive scanning
- D. The client used an incorrect passphrase

Answer: A

Explanation:

The exhibit shows a series of 802.1X authentication steps with multiple "Deauthentication" frames, which indicate that the client is not successfully completing the authentication process. Since the frames show repeated attempts at authentication followed by deauthentication, this suggests that the client is failing the 802.1X authentication process, which is required for network access in a WPA2/WPA3-Enterprise security environment.

#### NEW QUESTION # 64

A customer's infrastructure is set up to use both primary and secondary gateway clusters on the SSID profile based on best practices. Why do they have an equal split of their 120 APs across the primary and secondary gateway clusters?

- A. The primary and secondary gateway clusters are up, and the cluster preemption is enabled
- B. The secondary gateway cluster is a homogeneous cluster with six nodes.
- C. The primary gateway cluster is a heterogeneous cluster with six nodes.
- D. The primary and secondary gateway clusters are up, but the cluster preemption is not enabled

**Answer: D**

Explanation:

When cluster preemption is not enabled, access points (APs) will not automatically fail back to the primary gateway cluster once it is up again after having failed over to the secondary. This would result in an equal split of APs across primary and secondary clusters if both clusters are operational. Without preemption, there's no automatic rebalancing of APs back to the primary cluster, leading to the current distribution.

#### NEW QUESTION # 65

A client connecting to a tunneled open network is receiving the wrong VLAN. Your customer has a gateway and has sent over a packet capture from a switch port mirror taken from the upstream switch with a packet capture from the IPsec tunnel and the GRE tunnel to help identify the VLAN being sent from the controller to the AP.

Where will you see the VLAN assignment?

- A. VLAN tag assignment will be included in the port mirror
- B. VLAN tag assignment will not be captured in any of the packet captures
- C. IPsec tunnel will include the VLAN tag assignment
- D. The GRE tunnel will include the VLAN tag assignment

**Answer: A**

Explanation:

In a packet capture from an upstream switch port mirror, you would see the VLAN assignment. The port mirror captures the traffic as it is on the network, including any VLAN tags. GRE or IPsec tunnels encapsulate the original packet, including VLAN tags, but the VLAN information is not visible within the encapsulation headers.

#### NEW QUESTION # 66

After onboarding three new AOS-10 gateways using the full-setup method into the same HPE Aruba Networking Central group, a customer cannot log in to one of the gateways using the HPE Aruba Networking Central remote console due to an incorrect password.

What is causing this issue?

- A. The admin password created using full-setup does not match the global HPE Aruba Networking Central admin password
- B. The admin password created during the full-setup process does not match the HPE Aruba Networking Central group admin password
- C. The admin password created at the HPE Aruba Networking Central group level has expired
- D. The admin password created during the full-setup process is not configured to allow the remote console access

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of HPE Aruba Networking Switching:

When an AOS-10 gateway is onboarded into Aruba Central using the Full-Setup method, a local admin password is defined during

the setup wizard on the gateway itself. Later, when the gateway joins an existing Aruba Central group, the group-level configuration (which includes the admin password defined for that group) is automatically pushed down to all devices in that group for configuration consistency.

However, if the password defined during full-setup is different from the admin password defined in the Aruba Central group, the synchronization process can cause a mismatch between the local device password and the one expected by Central. This mismatch prevents remote console login from working properly because Aruba Central attempts to authenticate to the gateway using the group-level admin credentials, not the local credentials from full-setup.

Exact Extract from HPE Aruba Networking Switching and Aruba Central Configuration Documents:

"During onboarding, the admin password configured at the group level in Aruba Central is applied to all devices in the group. If a device is added using full-setup with a different password, it may fail Central- initiated authentication functions such as remote console."

"When gateways are provisioned using the full-setup workflow, the local administrator password must match the group-level administrator credentials in Aruba Central to allow remote console and CLI access through Central." Therefore, the issue arises because the full-setup password for the gateway does not match the group admin password defined in Aruba Central, resulting in the 'incorrect password' error when attempting to access the gateway remotely through Central.

Why the Other Options Are Incorrect:

\* A. The full-setup admin password is valid for remote access; there is no separate configuration option that "allows" or "disallows" remote console use.

"Remote console access uses the same admin account configured for device login; there is no additional enablement required."

\* B. Aruba Central admin passwords do not expire by default. Group-level admin credentials are persistent configuration items, not time-based credentials.

"Local and group administrator passwords are static until manually changed."

\* C. There is no "global Aruba Central admin password" used to authenticate to devices; authentication is performed using per-group or per-device credentials configured in Central.

"Each Aruba Central group maintains its own admin credentials that are propagated to member devices; there is no single global password for all groups." References of HPE Aruba Networking Switching Documents or Study Guide:

\* ArubaOS 10.5.0 Gateway Deployment and Configuration Guide - "Onboarding using Full Setup" and "Group-Level Configuration Synchronization."

\* Aruba Central Device Management Guide - "Group Admin Credentials and Remote Console Access."

\* Aruba AOS 10 Campus Gateway Installation and Setup Guide - "Matching Group Admin Passwords for Central-Managed Devices."

## NEW QUESTION # 67

Match each Group Based Policy (GBP) role description to its respective role ID.

GBP role ID = <100-8191>    GBP role ID = 2    GBP role ID = 0

Answer Area

default GBP role

infrastructure GBP role

user-defined GBP role

**Answer:**

Explanation:

GBP role ID = <100-8191>    GBP role ID = 2    GBP role ID = 0

Answer Area

default GBP role

infrastructure GBP role

user-defined GBP role

Explanation:

default GBP role = GBP role ID = 0

infrastructure GBP role = GBP role ID = 2

user-defined GBP role = GBP role ID = <100-8191>
