## WATCHGUARD NETWORK SECURITY ESSENTIALS EXAM QUESTIONS VERIFIED ANSWERS

---

1. When your device is in a default state, to which interface do you connect your management computer so you can use the Quick Setup Wizard or Web Setup Wizard to configure the device? (Select one.)
  - A. interface 0
  - B. Console interface
  - C. Any interface
  - D. Interface 1: Answer : D
2. In the default Firebox configuration file, which policies control management access to the device? (Select two.)
  - A. WatchGuard
  - B. FTP
  - C. Ping
  - D. WatchGuard Web UI
  - E. Outgoing: Answer : AD
3. To use the Web Setup Wizard or Quick Setup Wizard to configure your Firebox or XTM device, your computer must have an IP address on which subnet? (Select one.)
  - A. 10.0.10.0/24
  - B. 10.0.1.0/24
  - C. 172.16.10.0/24
  - D. 192.168.1.0/24: Answer : B
4. What is the best method to downgrade the version of Fireware OS on your Firebox without losing all device configuration settings? (Select one.)
  - A. Restore a saved backup image that was created for the device before the last Fireware OS upgrade.
  - B. Use the Upgrade OS feature in Fireware Web UI to install the sysa\_d1 file for an older version of Fireware OS.
  - C. Change the OS compatibility setting in Policy Manager to downgrade the device. Then use Policy Manager to save the configuration to the device.
  - D. Use the downgrade feature on Policy Manager to select a previous of Fireware OS.: Answer : A
5. You configured four Device Administrator user accounts for your Firebox. To see a report of which Device Management users have made changes to the device configuration, what must you do? (Select two.)
  - A. Start Firebox System Manager for the device and review the activity for the Management Users on the Authentication List tab.
  - B. Connect to Report Manager or Dimension and view the Audit Trail report for your device.
  - C. Open WatchGuard Server Center and review the configuration history for

**Network-Security-Essentials Training Online - Network-Security-Essentials  
Reliable Braindumps Files**

The WatchGuard braindumps torrents available at PrepAwayTest are the most recent ones and cover the difficulty of Network-Security-Essentials test questions. Get your required exam dumps instantly in order to pass Network-Security-Essentials actual test in your first attempt. Don't waste your time in doubts and fear; Our Network-Security-Essentials Practice Exams are absolutely trustworthy and more than enough to obtain a brilliant result in real exam.

## WatchGuard Network Security Essentials for Locally-Managed Fireboxes Sample Questions (Q52-Q57):

### NEW QUESTION # 52

Before packets are examined by Default Threat Protection, they are processed by firewall policies in top- down order.

- A. True
- B. False

**Answer: A**

Explanation:

In Firebox configuration, packets are processed by firewall policies in atop-down orderbefore they reach Default Threat Protection. This ordering ensures that the firewall policies defined higher in the policy list take precedence. Packets are evaluated against each rule sequentially from top to bottom until a matching policy is found, which then determines the action taken (allow, deny, or inspect further). Only after this process will any unfiltered traffic be subject to Default Threat Protection for additional security checks.

### NEW QUESTION # 53

What does a Firebox configured with default firewall policies do with outbound traffic that does not have a configured route? (Select one.)

- A. Sends the traffic to the default gateway
- B. Sends the traffic to the loopback interface
- C. Denies the traffic
- D. Drops the traffic

**Answer: D**

Explanation:

When a Firebox is configured with default firewall policies and encounters outbound traffic that lacks a specified route, the Firebox will drop this traffic. In firewall configurations, if there's no matching route or policy, the traffic typically gets discarded by default to prevent unintended data leakage or unauthorized connections. This behavior is standard for most firewall devices to ensure secure handling of unconfigured paths.

### NEW QUESTION # 54

Match each type of NAT with the correct descriptor

**Answer:**

Explanation:

Explanation:

Here are the correct answers for matching each NAT type with its descriptor:

\* Changes incoming packets sent to a public IP address to different internal IP addresses based on the destination portanswer:Static NAT Explanation: Static NAT maps a public IP address to multiple internal IP addresses based on the port, allowing specific services or applications to be routed to various internal destinations.

\* Allows a user on the trusted or optional network to connect to a public server that is on the same physical Firebox interface by its public IP address or domain nameanswer:NAT loopback Explanation: NAT loopback (or NAT reflection) allows internal users to access a public IP address or domain name that resolves to the same local network, making it appear as if they are connecting from outside the network.

\* Conserves IP addresses and hides the internal topology of your networkanswer:Dynamic NAT Explanation: Dynamic NAT (or PAT - Port Address Translation) conserves public IP addresses by allowing multiple internal devices to share a single public IP address. This setup is commonly used for outbound internet connections from a private network.

\* Changes all incoming and outgoing packets sent from one range of addresses to a different range of addressesanswer:1-to-1 NAT

Explanation: 1-to-1 NAT maps each internal IP address to a unique public IP address, providing a one-to-one relationship. This type of NAT is often used for networks that require external access to specific internal resources.

#### NEW QUESTION # 55

What type of NAT enables clients on a private network to connect to servers on the Internet? (Select one.)

- A. NAT loopback
- B. Hairpin NAT
- C. Dynamic NAT
- D. Static NAT

**Answer: C**

Explanation:

Dynamic NAT enables clients on a private network to connect to servers on the Internet. By translating private IP addresses to a public IP address (or pool of addresses), Dynamic NAT allows multiple devices within a private network to access external resources on the Internet. This form of NAT is essential in conserving IP addresses and maintaining privacy for internal network topologies.

#### NEW QUESTION # 56

Which of these statements are true for this log message? (Select three.)

- A. Gateway AntiVirus detected a virus
- B. The connection was denied
- C. Application Control detected the application as a virus
- D. The connection used an HTTP Packet Filter
- E. The connection used an HTTP Proxy
- F. The URL path matched the proxy content type restrictions

**Answer: A,B,E**

Explanation:

Analyzing a typical Firebox log message for a denied connection with an associated virus detection involves recognizing multiple elements:

\* HTTP Proxy Detection (C): If the connection utilized an HTTP proxy, this is typically noted in the log. Firebox's HTTP proxy is often used to inspect and manage web traffic, including scanning for malicious content.

\* Gateway AntiVirus Detection (D): This service scans HTTP traffic for malware and will generate log messages if it identifies a virus. When a virus is detected, the action taken is generally to block the connection.

\* Connection Denial (E): When a threat is detected (e.g., a virus via Gateway AntiVirus), Firebox policies are configured to deny the connection to prevent potential infection or data breaches. This is logged as a denied connection.

Other options, such as Application Control detecting a virus or the use of an HTTP Packet Filter, are not relevant in this context based on the function of HTTP proxies and Gateway AntiVirus in Firebox logs.

#### NEW QUESTION # 57

.....

This time set your mind at rest with the help of our Network-Security-Essentials guide quiz. You are free from any loss but focus on your success of the exam firmly this time. If you choose our nearly perfect Network-Security-Essentials practice materials with high quality and accuracy, our Network-Security-Essentials Training Questions can enhance the prospects of victory. Choosing our Network-Security-Essentials learning prep is the most useful way to improve your grade and chance to pass the exam.
