Topic - Invoice and Revenue Rates: How They Are Determined

Oracle Fusion Project Billing uses bill rates, burdening, and transfer price schedules to derive standard bill rates, multipliers, markups, and bases for calculating potential revenue when the revenue method classification on a revenue plan is as billed, as incurred, or rate based. Similarly, bill rates derive invoice amounts when the invoice method classification on a bill plan is rate based.

### 質問 # 18

Your client has implemented Oracle Cloud Applications with their United States business unit and United Kingdom business unit. After six months, they acquired another company in China and added a China business unit. A project accountant in your organization is authorized to access transactions for the US, UK, and China business units. The project accountant can see the transactions for the US and UK business units but not for the China business unit. Why is he not able to see the transactions for the China business unit? ( Choose the best answer.)

- A. The JOB role relevant to the China business unit is not assigned to the project accountant.
- B. The China business unit is associated with a different legal entity than the US and UK business units.
- **C. The project accountant is not assigned to the external role that grants access to the China business unit.**
- D. The US and UK business units are linked to different ledgers than the China business unit.

正解: C

解説:

To access transactions for a business unit, the project accountant needs to be assigned to an external role that grants access to that business unit. The external role is defined by the security profile of the business unit and can be different for each business unit. The job role and the legal entity are not relevant for accessing transactions for a business unit. The ledger is relevant for accounting transactions, but not for project transactions. ### 質問 # 19

Which three are project gate statuses? (Choose three.)

- **A. In Review**
- **B. Closed**
- **C. Open**
- D. Draft
- E. Approve

正解: A、B、C

解説:

Project gate statuses are values that indicate the progress or completion of a project gate. A project gate is a checkpoint that marks the end of a phase or stage in a project lifecycle. Three of the project gate statuses are:

\* Open: This status indicates that the project gate is not yet ready for review or approval.

\* In Review: This status indicates that the project gate is under review or approval by the gate reviewers or approvers.

\* Closed: This status indicates that the project gate has been reviewed or approved and the project can move to the next phase or stage. Approve and Draft are not project gate statuses, but actions that can be performed on a project gate. Approve is an action that allows a gate approver to approve a project gate and change its status to Closed. Draft is an action that allows a gate owner to create or edit a project gate and change its status to Open. #### 質問 # 20

Your organization has been awarded a new contract based on which you are allowed to sell:

- \* Items not tracked in inventory
- \* Inventory items
- \* Services

Which contract structure would fulfill your requirement of item sales? (Choose the best answer.)

- A. Create two contract lines with a line type each of "sell intent, item, project-based" and "subscription, project-based, sell".
- **B. Create two contract lines with a line type each of "sell intent, free-form, project-based" and "sell intent, item, project-based".**
- C. Create two contract lines with a line type each of "free-form, project-based buy agreement" and "bundle sell, project-based".
- D. Create two contract lines with a line type each of "product, project-based, sell agreement, standalone" and "sell intent, item, project-based".

正解: B

解説:

To sell items not tracked in inventory, inventory items, and services, you can create two contract lines with different line types. The line type of "sell intent, free-form, project-based" allows you to sell any item or service without specifying the item number or quantity. The line type of "sell intent, item, project-based" allows you to sell inventory items by specifying the item number and quantity. Both line types are project-based, meaning they are linked to a project and generate revenue based on project performance. Reference:

#### 質問 # 21

A consulting services company is currently working on a business transformation project for your client, which spans multiple years. At the first period close, the consulting services company has recognized revenue and the accounting entry created is:

Dr Unbilled Receivables 40,000

Cr Revenue 40,000

At the end of the period, the client is sent an associated bill. What would be the corresponding invoice accounting entry? (Choose the best answer.)

- **A. Dr Accounts Receivables 40,000Cr Unbilled Receivables 40,000**
- B. Dr Unearned Revenue 40,000Cr Revenue 40,000
- C. Dr Accounts Receivables 40,000Cr Revenue 40,000
- D. Dr Unearned Revenue 40,000Cr Accounts Receivables 40,000

正解: A

解説:

When the invoice is created, the unbilled receivables balance is reduced and the accounts receivables balance is increased by the invoice amount. This is because the revenue has already been recognized and the invoice is just a request for payment from the customer.
