

# CT-UT Antworten & CT-UT Prüfungsaufgaben

Wie andere weltberühmte Zertifizierungen wird die CT-UT Zertifizierungsprüfung auch international akzeptiert. Die CT-UT Zertifizierungsprüfungen haben auch breite IT-Zertifizierungen. Die Leute in der ganzen Welt wählen gerne die die CT-UT Zertifizierungsprüfung, um Erfolg im Berufsleben zu erlangen. In Pass4Test können Sie die Ihnen geeigneten Produkte zum Lernen wählen.

Heutzutage, wo Zeit in dieser Gesellschaft sehr geschätzt wird, schlage ich Ihnen vor, die effizienten ISTQB CT-UT (ISTQB Certified Tester Usability Tester) Fragenkataloge von Pass4Test zu wählen. Sie können mit weniger Zeit und Geld die ISTQB CT-UT Zertifizierungsprüfung nur einmalig bestehen können.

## ISTQB CT-UT Prüfungsaufgaben & CT-UT Echte Fragen

Pass4Test ist eine Website, die am schnellsten aktualisierten ISTQB CT-UT Zertifizierungsmaterialien von hoher Qualität bietet. Vielleicht bieten die anderen Websites auch die relevanten Materialien zur ISTQB CT-UT (ISTQB Certified Tester Usability Tester) Zertifizierungsprüfung. Wenn Sie Pass4Test mit anderen Websites vergleichen, dann werden Sie finden, dass die Materialien von Pass4Test umfassendst und zwar von hoher Qualität sind. Die meisten Ressourcen von anderen Websites stammen hauptsächlich aus Pass4Test.

## ISTQB Certified Tester Usability Tester CT-UT Prüfungsfragen mit Lösungen (Q39-Q44):

### 39. Frage

Your project manager asked you for your advice. A recent project failed because the users were not satisfied with the final product, although your project manager claimed that she followed the human-centered design process. She interviewed users at the start of the project, created a first prototype and evaluated that prototype.

Which part of the human-centered design process did she miss?

- A. The "iterate"-part
- B. The "analyze"-part
- C. The "design"-part
- D. The "evaluate"-part

**Antwort: A**

Begründung:

The human-centered design process emphasizes iterative development-testing and refining designs through multiple cycles. In the scenario, the project manager interviewed users and evaluated a prototype but did not iterate based on feedback. Skipping iteration likely resulted in unmet user needs. Human-centered design, per ISO 9241-210, includes: understanding context of use, specifying requirements, producing design solutions, and evaluating-repeated iteratively. Hence, option D ("iterate") is correct.

#####

#### 40. Frage

Which of these basic approaches to a software development project follows all key elements of human-centered evaluation?

- A. Iteratively develop prototypes, perform expert reviews, and integrate found issues
- **B. Interview users, iteratively develop prototypes, and evaluate the software**
- C. Interview users, develop the software, and perform acceptance test
- D. Define requirements, develop the software, and perform acceptance test

**Antwort: B**

Begründung:

Human-centered design, as defined by ISO 9241-210, emphasizes early user involvement, iterative design, and continuous usability evaluation. Option D aligns with this model as it begins with understanding user needs (interview users), proceeds through iterative prototyping (which allows for continuous improvement), and involves user evaluation. This ensures that the final product is shaped by real user input and feedback.

Options A and B lack iteration and continuous evaluation, while option C, although partially aligned, lacks explicit user involvement in the evaluation process, focusing only on expert reviews.

#####

#### 41. Frage

During a usability test, a user suggested that a quick search box on every page would help a lot for several of the main tasks. You added this finding to the list.

What's the correct classification for these kinds of findings?

- A. Functional problem
- **B. Good idea**
- C. Positive finding
- D. Usability problem

**Antwort: B**

Begründung:

In usability evaluations, a distinction is made between actual usability problems (where a user struggles to complete a task or is confused by the interface) and suggestions or ideas that users provide based on their preferences or perceived improvements. When a participant offers a new feature idea (such as a quick search box), this is classified as a "good idea" or "feature suggestion," not necessarily a usability problem. It may inform future design enhancements but does not indicate a failure in usability for existing functionality.

#####

#### 42. Frage

Which of the following is the best description for a usability test session?

- A. A test activity specified by the moderator that needs to be accomplished by a usability test participant within a given period of time.
- B. A document specifying a sequence of actions for the execution of a usability test.
- C. A period of time in which a usability test participant is executing tests, moderated by a moderator and observed by a number of observers.
- D. A black-box test technique in which test cases are designed to execute usability scenarios.

**Antwort: C**

Begründung:

A usability test session is a controlled period during which a test participant performs tasks using the system under test while being observed by a moderator and sometimes additional stakeholders or observers. The goal is to understand how users interact with the interface and identify usability problems. Option A describes an individual task, not the whole session. Option C refers to a test plan or test script, and Option D describes a test technique rather than a usability session. Thus, option B provides the most accurate and comprehensive definition.

#####

#### 43. Frage

Which of the following is a principal task of the usability test moderator role?

- A. Create a survey plan
- B. Log usability problems
- C. Write a usability test plan
- D. Define testing tasks

**Antwort: D**

Begründung:

The usability test moderator plays a crucial role during the execution phase of a usability test. Their principal task is to facilitate the test sessions by guiding participants through predefined testing tasks, observing behaviors, and ensuring that the test environment is neutral and free from bias. Defining testing tasks, however, is primarily done during the test design phase by the usability test designer or analyst, but the moderator ensures these tasks are clearly communicated and administered to participants during the session. Logging usability problems (option B) is often done by observers or analysts reviewing session recordings or notes, not directly by the moderator during live testing. Creating a survey plan (option C) and writing the usability test plan (option D) are preparatory activities generally done before the test sessions and are not the moderator's main focus. Therefore, the principal role of the moderator centers on conducting the sessions and managing task delivery effectively to obtain authentic user interaction with the system under test.
