Latest CPC-CDE-RECERT Dumps Questions - Exam CPC-CDE-RECERT Pass4sure

Our users can prove to you that the hit rate of our CPC-CDE-RECERT exam questions is very high. And you can just see the data how many customers are visiting our CPC-CDE-RECERT study materials everyday. And the pass rate is also high as 98% to 100%. You can walk into the examination room with peace of mind, after which you will experience a very calm examination. As for the result, please come home and wait. Our CPC-CDE-RECERT training prep will not disappoint you.

CyberArk CDE-CPC Recertification Sample Questions (Q85-Q90):

NEW QUESTION # 85

The System Health page shows the status of all components related to Privilege Cloud. Which components can administrators monitor on this page? (Choose two.)

- A. CPM
- B. Vault
- C. PSM
- D. PVWA
- E. PTA

Answer: A,C

Explanation:

In Privilege Cloud Shared Services, the System Health dashboard lists component categories that include CPM (and Accounts

Discovery) and PSM (and PSM for SSH), along with Web Portal and Secrets Manager Credential Providers. Vault/PVWA/PTA are not listed as monitorable components on this page in the Privilege Cloud Shared Services System Health topic.

NEW QUESTION # 86

You need to map an enterprise's Active Directory to Privilege Cloud Shared Services to enable users to log in to CyberArk through their LDAP credentials. What do you need to accomplish this? (Choose two.)

- A. Read-only domain user to facilitate the LDAP mapping
- B. Configuration of a Federated Domain on the Identity Platform
- C. Port 636 open to the Privilege Cloud back-end
- **D. Trusted certificate for LDAP server installed on Identity Connector**
- **E. Installation and configuration of the Identity Connector**

Answer: D,E

Explanation:

CyberArk documents that to provision/authenticate users based on on-prem directory services using LDAP with Shared Services, you must first install the Identity Connector.

CyberArk also states LDAP communication to the Identity Connector is over TLS/SSL, and during the TLS handshake the LDAP server must present an X.509 certificate, meaning the connector must be able to trust the LDAP/LDAPS certificate chain (i.e., a trusted certificate on the connector side is required for LDAPS trust).

Therefore, the correct choices are B (Identity Connector) and D (trusted LDAP server certificate on the connector).

Why the other options are not correct as stated:

* C is wrong because LDAPS (636) is between the Identity Connector and the domain controllers /LDAP server, not "opened to the Privilege Cloud back-end" directly.

* E is not required for LDAP credential login; federated domains are used for federation/SSO use cases, while LDAP mapping is handled via the connector + LDAPS trust.

* A (read-only domain user) is commonly used as the Bind DN/service account, but in the Shared Services LDAP requirement set here, the two must-have items that CyberArk calls out for enabling this path are the Identity Connector and the LDAPS certificate trust.

NEW QUESTION # 87

Arrange the steps to install passive CPM using Connector Management in the correct sequence

The screenshot shows a CyberArk interface titled "The Identity Security Company". It features two columns: "Unordered Options" on the left and "Ordered Response" on the right. The "Unordered Options" column contains four steps: "Run the Connector Management Connector installer.", "When prompted to select the CPM mode, select Passive.", "When prompted to select the components to install, select CPM.", and "Install the CPM and optionally PSM, if required." The "Ordered Response" column is currently empty. A large watermark "validbrainedumps.com" is overlaid diagonally across the interface.

Answer:

Explanation:

Explanation:

- 1-Run the Connector Management Connector installer
- 2-Install the CPM and PSM
- 3-When you are prompted to select the components to install, select CPM.
- 4-When you are prompted to select the CPM mode, select Passive.

<https://docs.cyberark.com/ispss-deployment/latest/en/content/privilege%20cloud/privcloud-cpm-dr-install- config.htm>

NEW QUESTION # 88

You are configuring an integration to provision users based on LDAP directory services for Privilege Cloud Shared Services. Which component must first be installed and configured in the environment to support this?

- A. Privilege Cloud Connector
- B. Linux Connector Server
- C. CyberArk Identity Connector
- D. Secure Tunnel

Answer: C

Explanation:

For Shared Services (ISPSS), CyberArk's Identity Administration documentation states: "To provision users based on on-prem directory services, you must first install the Identity Connector." This is because Privilege Cloud Shared Services leverages CyberArk Identity directory services integration (via the Identity Connector) for AD/LDAP provisioning and authentication.

NEW QUESTION # 89

CyberArk User Neil is trying to connect to the Target Linux server 192.168.1.164 using a domain user ACME\linuxuser01 on domain acme.corp using PSM for SSH server 192.168.65.145.

What is the correct syntax?

- A. `ssh neil@linuxuser01@acme.corp@192.168.1.164@192.168.65.145`
- B. `ssh neil@linuxuser01:acme.corp@192.168.1.164@192.168.65.145`
- C. `sshneil@linuxuser01@192.168.1.164@192.168.65.145`
- D. `ssh neil@linuxuser01#acme.corp@192.168.1.164@192.168.65.145`

Answer: D

Explanation:

In CyberArk Privilege Cloud, when connecting to a target server using the Privileged Session Manager (PSM) for SSH, the correct syntax for the SSH command includes the following format: `ssh neil@linuxuser01#acme.corp@192.168.1.164@192.168.65.145`.

This syntax breaks down as follows:

* neil: The CyberArk username.

* linuxuser01#acme.corp: The domain user on the target Linux server, formatted as `username#domain`.

* 192.168.1.164: The IP address of the target Linux server.

* 192.168.65.145: The IP address of the PSM for SSH server.

This specific format ensures that the CyberArk Privileged Access Manager correctly interprets and routes the connection through the PSM for SSH to the intended target server.
