CompTIA Advanced Security Practitioner (CASP+) Exam Sample Questions (Q521-Q526):

NEW QUESTION # 521

A regulated company is in the process of refreshing its entire infrastructure. The company has a business-critical process running on an old 2008 Windows server. If this server fails, the company would lose millions of dollars in revenue. Which of the following actions should the company take?

- A. Implement network compensating controls.
- B. Purchase insurance to offset the cost if a failure occurred.
- C. Accept the risk as the cost of doing business.
- D. Create an organizational risk register for project prioritization.

Answer: D

Explanation:
Step by Step
Creating an organizational risk register ensures the issue is documented and prioritized for mitigation, aligning with risk management best practices.
Accepting the risk is not advisable due to the financial implications of failure.
Implementing network compensating controls does not address server reliability.
Purchasing insurance only offsets financial risk and does not ensure system functionality.

NEW QUESTION # 522

An organization offers SaaS services through a public email and storage provider. To facilitate password resets, a simple online system is set up. During a routine check of the storage each month, a significant increase in use of storage can be seen. Which of the following techniques would remediate the attack?

- A. Implementing a new password reset system
- B. Including input sanitization to the logon page
- C. Adding MFA to all accounts
- D. Configuring an account lockout policy

Answer: B

Explanation:
By sanitizing inputs, you can prevent malicious data from being inserted or uploaded to the system, which could be causing the unexpected increase in storage use.

NEW QUESTION # 523

A financial institution has several that currently employ the following controls:
* The severs follow a monthly patching cycle.
* All changes must go through a change management process.
* Developers and systems administrators must log into a jumpbox to access the servers hosting the data using two-factor authentication.
* The servers are on an isolated VLAN and cannot be directly accessed from the internal production network.
An outage recently occurred and lasted several days due to an upgrade that circumvented the approval process. Once the security team discovered an unauthorized patch was installed, they were able to resume operations within an hour. Which of the following should the security administrator recommend to reduce the time to resolution if a similar incident occurs in the future?

- A. Require more than one approver for all change management requests.
- B. Implement file integrity monitoring with automated alerts on the servers.
- C. Disable automatic patch update capabilities on the servers
- D. Enhanced audit logging on the jump servers and ship the logs to the SIEM.

Answer: B

NEW QUESTION # 524

A threat analyst notices the following URL while going through the HTTP logs.

Which of the following attack types is the threat analyst seeing?

- A. SQL injection
- B. XSS
- C. Session hijacking
- D. CSRF

Answer: B

NEW QUESTION # 525

A small company needs to reduce its operating costs. vendors have proposed solutions, which all focus on management of the company's website and services. The Chief information Security Officer (CISO) insist all available resources in the proposal must be dedicated, but managing a private cloud is not an option. Which of the following is the BEST solution for this company?

- A. Multinency SaaS
- B. On-premises cloud service model
- C. Single-tenancy SaaS
- D. Community cloud service model

Answer: C

Explanation:
A single-tenancy SaaS solution is the best solution for this company. SaaS stands for software as a service, which is a cloud-based model that allows customers to access applications hosted by a provider over the internet. A single-tenancy SaaS solution means that the company has its own dedicated instance of the application and its underlying infrastructure, which offers more control, customization, and security than a multi-tenancy SaaS solution where multiple customers share the same resources. A single-tenancy SaaS solution also eliminates the need for managing a private cloud or an on-premises infrastructure.

NEW QUESTION # 526

......
