Nowadays in this information-based world the definition of the talents mean that the personnel boost both the knowledge in Associate-Cloud-Engineer area and the practical abilities now. So if you want to be the talent the society actually needs you must apply your knowledge into the practical working and passing the test Associate-Cloud-Engineer Certification can make you become the talent the society needs. If you buy our Associate-Cloud-Engineer study materials you will pass the exam successfully and realize your goal to be the talent.

To prepare for the exam, candidates can take advantage of Google's training resources, including online courses and hands-on labs. Additionally, there are many third-party resources available, such as study guides and practice exams, that can help candidates prepare for the exam. It is recommended that candidates have at least six months of experience working with Google Cloud technologies before taking the exam.

Associate-Cloud-Engineer Study Materials & Associate-Cloud-Engineer Exam Preparatory & Associate-Cloud-Engineer Test Prep

There is an irreplaceable trend that an increasingly amount of clients are picking up Associate-Cloud-Engineer study materials from tremendous practice materials in the market. There are unconquerable obstacles ahead of us if you get help from our Associate-Cloud-Engineer Exam Questions. So many exam candidates feel privileged to have our Associate-Cloud-Engineer practice braindumps. And our website is truly very famous for the hot hit in the market and easy to be found on the internet.

To earn the Google Associate-Cloud-Engineer Certification, you need to pass a 2-hour online exam that consists of multiple-choice and multiple-select questions. Associate-Cloud-Engineer exam is designed to test your knowledge of GCP services, including Compute Engine, App Engine, Kubernetes Engine, Cloud Storage, Cloud SQL, Cloud Spanner, and BigQuery. Associate-Cloud-Engineer exam also assesses your ability to configure and manage GCP services, including networking, security, and access management.

Google Cloud Computing is one of the biggest and fastest-growing cloud computing platforms in the world. As organizations increasingly move towards the cloud, the demand for professionals skilled in managing and operating cloud-based solutions is on the rise. One way to demonstrate your proficiency in this field is by earning the Google Associate-Cloud-Engineer Certification.

Google Associate Cloud Engineer Exam Sample Questions (Q82-Q87):

NEW QUESTION # 82

Your company plans to migrate its on-premises PostgreSQL database to Google Cloud. The workloads are demanding, requiring fast transactional and analytical performance. You need to select a fully managed database service on Google Cloud. Your solution must also be able to synchronously replicate and optimize the storage layer. What should you do?

- A. Use the psql client installed on a Compute Engine Instance. Connect to the Cloud SQL instance to perform the database migration.
- B. Create a Compute Engine instance. Install and configure PostgreSQL on the instance, and migrate the database.
- C. Migrate the database to Cloud SQL for PostgreSQL by using Database Migration Service.
- **D. Migrate the database to AlloyDB for PostgreSQL by using Database Migration Service.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The requirements point to the highest performance tier for a managed PostgreSQL-compatible database, specifically citing demands for transactional and analytical performance, synchronous replication, and storage optimization.

AlloyDB for PostgreSQL is Google Cloud's highly specialized, fully managed database that is optimized for demanding enterprise workloads. It is superior to standard Cloud SQL for performance and architectural features like synchronous replication and an optimized storage layer, directly matching all the stated requirements.

Database Migration Service (DMS) is the recommended tool for performing the migration itself.

Reference: Google Cloud Documentation - AlloyDB for PostgreSQL (Overview):

"AlloyDB for PostgreSQL is a fully managed PostgreSQL-compatible database service that is designed for demanding enterprise workloads... [It] delivers high availability and synchronous replication for better data protection and faster failover." Reference:

Google Cloud Documentation - Database Migration Service (Overview):

"Database Migration Service (DMS) simplifies your database migrations to Cloud SQL and AlloyDB."

NEW QUESTION # 83

Your company has a single sign-on (SSO) identity provider that supports Security Assertion Markup Language (SAML) integration with service providers. Your company has users in Cloud Identity. You would like users to authenticate using your company's SSO provider. What should you do?

- A. In Cloud Identity, set up SSO with Google as an identity provider to access custom SAML apps.
- B. Obtain OAuth 2.0 credentials, configure the user consent screen, and set up OAuth 2.0 for Mobile & Desktop Apps.
- **C. In Cloud Identity, set up SSO with a third-party identity provider with Google as a service provider.**
- D. Obtain OAuth 2.0 credentials, configure the user consent screen, and set up OAuth 2.0 for Web Server Applications.

Answer: C

NEW QUESTION # 84

You are migrating a production-critical on-premises application that requires 96 vCPUs to perform its task. You want to make sure the application runs in a similar environment on GCP. What should you do?

- A. Create the VM using Compute Engine default settings. Use gcloud to modify the running instance to have 96 vCPUs.
- **B. When creating the VM, use machine type n1-standard-96.**
- C. Start the VM using Compute Engine default settings, and adjust as you go based on Rightsizing Recommendations.
- D. When creating the VM, use Intel Skylake as the CPU platform.

Answer: B

Explanation:

NEW QUESTION # 85

You have an application that uses Cloud Spanner as a database backend to keep current state information about users. Cloud Bigtable logs all events triggered by users. You export Cloud Spanner data to Cloud Storage during daily backups. One of your analysts asks you to join data from Cloud Spanner and Cloud Bigtable for specific users. You want to complete this ad hoc request as efficiently as possible. What should you do?

- A. Create a Cloud Dataproc cluster that runs a Spark job to extract data from Cloud Bigtable and Cloud Storage for specific users.
- B. Create a dataflow job that copies data from Cloud Bigtable and Cloud Storage for specific users.
- **C. Create a dataflow job that copies data from Cloud Bigtable and Cloud Spanner for specific users.**
- D. Create two separate BigQuery external tables on Cloud Storage and Cloud Bigtable. Use the BigQuery console to join these tables through user fields, and apply appropriate filters.

Answer: C

NEW QUESTION # 86

You need to help a developer install the App Engine Go extensions. However, you've forgotten the exact name of the component. Which command could you run to show all of the available options?

- **A. gcloud components list**
- B. gcloud config list
- C. gcloud config components list
- D. gcloud component list

Answer: A
