

Exam Sample CCCS-203b Online - Exam CCCS-203b Pass4sure

BONUS!!! Download part of Prep4King CCCS-203b dumps for free: https://drive.google.com/open?id=1SqDsoB1v7RSHoYGy_QmLsGI_pQo-YI4

You will be cast in light of career acceptance and put individual ability to display. When you apply for a job you could have more opportunities than others. What is more, there is no interminable cover charge for our CCCS-203b practice engine priced with reasonable prices for your information. Considering about all benefits mentioned above, you must have huge interest to our CCCS-203b Study Materials. You should take the look at our CCCS-203b simulating questions right now.

CrowdStrike CCCS-203b Exam Syllabus Topics:

| Topic | Details |
|---------|---|
| Topic 1 | <ul style="list-style-type: none">• Pre-Runtime Protection: This domain covers managing registry connections, selecting image assessment methods, and analyzing assessment reports to identify malware, CVEs, leaked secrets, Dockerfile misconfigurations, and vulnerabilities before deployment. |
| Topic 2 | <ul style="list-style-type: none">• Runtime Protection: This domain focuses on selecting appropriate Falcon sensors for Kubernetes environments, troubleshooting deployments, and identifying misconfigurations, unassessed images, IOAs, rogue containers, drift, and network connections. |
| Topic 3 | <ul style="list-style-type: none">• Cloud Security Policies and Rules: This domain addresses configuring CSPM policies, image assessment policies, Kubernetes admission controller policies, and runtime sensor policies based on specific use cases. |
| Topic 4 | <ul style="list-style-type: none">• Falcon Cloud Security Features and Services: This domain covers understanding CrowdStrike's cloud security products (CSPM, CWP, ASPM, DSPM, IaC security) and their integration, plus one-click sensor deployment and Kubernetes admission controller capabilities. |

Perfect CCCS-203b – 100% Free Exam Sample Online | Exam CCCS-203b Pass4sure

Although our company has designed the best and most suitable CCCS-203b learn prep, we also do not stop our step to do research about the CCCS-203b study materials. All experts and professors of our company have been trying their best to persist in innovate and developing the CCCS-203b test training materials all the time in order to provide the best products for all people and keep competitive in the global market. We believe that the CCCS-203b Study Materials will keep the top selling products. We sincerely hope that you can pay more attention to our CCCS-203b study questions.

CrowdStrike Certified Cloud Specialist Sample Questions (Q351-Q356):

NEW QUESTION # 351

While auditing a cloud image configured for deployment, which of the following findings represents a deployment misconfiguration?

- A. The image uses a private container registry with role-based access control (RBAC).
- B. The image lacks a health check directive in the Dockerfile.
- C. The image includes unused software packages.
- D. The image has labels for versioning and maintainability metadata.

Answer: C

Explanation:

Option A: While missing a health check directive is not ideal for production readiness, it is not a security misconfiguration. Health checks are primarily for operational monitoring and ensuring high availability.

Option B: This is a best practice to ensure only authorized users can access the image. It strengthens the security of the deployment pipeline and does not represent a misconfiguration.

Option C: Adding labels for versioning and maintainability metadata (e.g., LABEL version="1.0") is a best practice. It aids in managing image lifecycles and troubleshooting deployments. This does not constitute a misconfiguration.

Option D: Including unused software packages increases the attack surface and may introduce unnecessary vulnerabilities. Attackers could exploit unmaintained or outdated components, even if they are not actively used by the application. Removing unnecessary packages during the build process is a key security best practice.

NEW QUESTION # 352

When configuring a Falcon Fusion workflow to notify individuals after automated remediation, which action ensures effective communication with the security team?

- A. Rely solely on the Falcon platform's detection history to inform the team.
- B. Set the workflow to terminate immediately after the remediation action is executed.
- C. Integrate the workflow with an external notification system like Slack or email.
- D. Use a webhook to trigger an external system without specifying recipients.

Answer: C

Explanation:

Option A: Integrating with external systems ensures that individuals receive real-time notifications about automated remediation actions. Platforms like Slack or email allow the security team to stay informed promptly and collaborate efficiently on follow-up actions.

Option B: Terminating the workflow immediately after remediation would skip the notification step, preventing the team from being informed. Notifications are critical for tracking and transparency.

Option C: Detection history provides useful insights but does not proactively notify individuals. Relying solely on it may result in delayed responses or missed alerts.

Option D: While webhooks are useful for integrating with external systems, failing to specify recipients or channels makes the notification less actionable. Clear communication pathways are necessary.

NEW QUESTION # 353

What is the primary purpose of performing an automated remediation dry run in the CrowdStrike Falcon platform?

- A. To generate compliance reports based on historical threat data
- B. To apply remediation actions to all detected threats without committing changes
- C. To evaluate the potential impact of remediation actions without executing them
- D. To create new automated remediation workflows using predefined templates

Answer: C

Explanation:

Option A: A dry run does not apply any remediation actions; it merely simulates them. Applying actions to detected threats would go beyond the scope of a dry run, potentially causing changes in the environment.

Option B: An automated remediation dry run allows security teams to simulate remediation actions without actually applying them.

This helps evaluate the potential impact of the proposed actions on the cloud environment, ensuring no unintended disruptions occur. It is a critical step in refining and testing workflows before deployment.

Option C: Dry runs are not related to compliance reporting. Their focus is on testing and evaluating remediation workflows, not analyzing past data for compliance.

Option D: While workflows can use templates, creating workflows is a separate activity. Dry runs are performed on existing workflows to test their efficacy.

NEW QUESTION # 354

Which of the following is not a benefit of using CrowdStrike Falcon's one-click sensor deployment for cloud security?

- A. Ensures that sensors are automatically installed on all cloud workloads, even those running ephemeral instances.
- B. Reduces operational overhead for security teams by eliminating the need for manual sensor installation.
- C. **Minimizes the time required to secure new cloud workloads by automating deployment.**
- D. Provides security administrators with the ability to deploy and manage sensors directly from the Falcon console.

Answer: C

Explanation:

Option A: While the Falcon platform supports automated deployment, it does not always guarantee installation on ephemeral instances (e.g., serverless functions, short-lived containers) unless configured properly. Security teams may need orchestration tools to ensure persistent coverage.

Option B: The Falcon console provides direct control over sensor deployment and management, enabling security teams to efficiently oversee cloud security.

Option C: Automating sensor deployment reduces the operational burden by eliminating manual installation steps, allowing security teams to focus on threat detection and response.

Option D: One-click sensor deployment significantly reduces the time required to secure cloud workloads by automating deployment, ensuring immediate protection.

NEW QUESTION # 355

A security team is tasked with ensuring that all installed packages in their cloud workloads are regularly analyzed for vulnerabilities. They want to integrate CrowdStrike Falcon's pre-runtime protection to enhance security visibility.

What is the most effective approach for detecting and mitigating vulnerabilities before execution?

- A. Implement only network-based intrusion detection systems (IDS) to monitor for suspicious activity
- B. Only allow software installations from trusted vendors without performing vulnerability scanning
- C. **Utilize Falcon Spotlight to scan for vulnerabilities and integrate with patch management solutions**
- D. Rely on traditional antivirus (AV) software to detect vulnerabilities in installed packages

Answer: C

Explanation:

Option A: Even trusted vendors can distribute software with vulnerabilities. Without vulnerability scanning, critical security issues in dependencies could go undetected.

Option B: Falcon Spotlight provides automated vulnerability scanning for installed packages, identifying risks before execution. Integrating with a patch management solution ensures quick remediation of detected vulnerabilities.

Option C: Traditional AV software primarily detects known malware signatures but does not provide proactive vulnerability scanning for installed software. Dedicated vulnerability management tools are necessary.

Option D: IDS solutions detect suspicious network activity but do not proactively identify vulnerabilities in installed packages. Pre-runtime vulnerability scanning is essential for mitigating risks before execution.

NEW QUESTION # 356

.....

Everyone wants to have a good job and decent income. But if they don't have excellent abilities and good major knowledge they are hard to find a decent job. Passing the test CCCS-203b certification can make you realize your dream and find a satisfied job. Our CCCS-203b study materials are a good tool that can help you pass the CCCS-203b Exam easily. You needn't spend too much time to learn it. Our CCCS-203b exam guide is of high quality and if you use our product the possibility for you to pass the CCCS-

203b exam is very high as 99% to 100%.
