## **CheckPoint Check Point Certified Security Administrator - R82 Sample Questions (Q177-Q182):**

### **NEW QUESTION # 177**

To quickly review when Threat Prevention signatures were last updated, which Threat Tool would an administrator use?

- A. IPS Protections
- B. ThreatWiki
- C. Protections
- D. Profiles

**Answer: A**

Explanation:

According to the Learn More About Threat Signatures<sup>4</sup>, to quickly review when Threat Prevention signatures were last updated, you can use the IPS Protections tool. This tool shows you the date and time of the last update, as well as the number of signatures and their categories. Learn More About Threat Signatures

### **NEW QUESTION # 178**

Security Zones do not work with what type of defined rule?

- A. Firewall rule
- B. Application Control rule
- C. Manual NAT rule
- D. IPS bypass rule

**Answer: C**

Explanation:

Security Zones are a feature of Application Control and Identity Awareness that allow you to define groups of network objects based on their level of trust. Security Zones do not work with Manual NAT rules, because Manual NAT rules are applied before the Application Control and Identity Awareness policy is enforced<sup>1</sup>. Check Point R81 Security Management Administration Guide

### **NEW QUESTION # 179**

Fill in the blank: An LDAP server holds one or more \_\_\_\_\_.

- A. Account Servers
- B. Administrator Units
- C. Account Units
- D. Server Units

**Answer: C**

Explanation:

An LDAP server holds one or more Account Units. An Account Unit is a logical representation of an LDAP server in the Check Point database. It defines the connection parameters, authentication methods, and user and group information that are retrieved from the LDAP server. An Account Unit allows the Security Gateway to use the LDAP server for user authentication and identity awareness. The other options are incorrect. A Server Unit is a logical representation of a Check Point server in the Check Point database. An Administrator Unit is a logical representation of an administrator or an administrator group in the Check Point database. An Account Server is not a valid term in Check Point terminology. ### **NEW QUESTION # 180**

Fill in the blank: Service blades must be attached to a \_\_\_\_\_.

- A. Security Gateway container
- B. Management server
- **C. Security Gateway**
- D. Management container

**Answer: C**

Explanation:

Service blades must be attached to a Security Gateway. A Security Gateway is a device that enforces security policies on traffic that passes through it. A service blade is a software module that provides a specific security function, such as firewall, VPN, IPS, etc. A Security Gateway can have one or more service blades attached to it, depending on the license and hardware capabilities. The other options are incorrect. A management container is a virtualized environment that hosts a Security Management Server or a Log Server. A management server is a device that manages security policies and distributes them to Security Gateways. A Security Gateway container is not a valid term in Check Point terminology. [Check Point R81 Security Management Administration Guide], [Check Point R81 CloudGuard Administration Guide]

#### **NEW QUESTION # 181**

What type of NAT is a one-to-one relationship where each host is translated to a unique address?

- A. Destination
- B. Hide
- **C. Static**
- D. Source

**Answer: C**

Explanation:

The type of NAT that is a one-to-one relationship where each host is translated to a unique address is Static NAT. Static NAT maps an unregistered IP address to a registered IP address on a one-to-one basis. This means that for each internal host, there is a corresponding external address that represents it. Therefore, the correct answer is B
