

LEED-Green-Associate Valid Dump & LEED-Green-Associate Reliable Test Objectives

What's more, part of that ActualTorrent LEED-Green-Associate dumps now are free: <https://drive.google.com/open?id=1D94OvmMagT-rl5ODqDlrO5bBRR39sjCi>

Although it is difficult for you to prepare for LEED-Green-Associate exam, once you obtain the targeted exam certification, you will have a vast development prospects in IT industry. So what we can do is to help you not waste your efforts on the exam preparation. The Reliability and authority of LEED-Green-Associate Exam software on our ActualTorrent has been recognized by majority of our customers, which will be found when you download our free demo. We will try our best to help you pass LEED-Green-Associate exam successfully.

Compared with our PDF version of LEED-Green-Associate training guide, you will forget the so-called good, although all kinds of digital device convenient now we read online to study for the LEED-Green-Associate exam, but many of us are used by written way to deepen their memory patterns. Our PDF version of LEED-Green-Associate prep guide can be very good to meet user demand in this respect, allow the user to read and write in a good environment continuously consolidate what they learned. And the PDF version of LEED-Green-Associate learning guide can be taken to anywhere you like, you can practice it at any time as well.

USGBC LEED-Green-Associate Reliable Test Objectives & LEED-Green-Associate Test Pdf

This format is for candidates who do not have the time or energy to use a computer or laptop for preparation. The USGBC LEED-Green-Associate PDF file includes real USGBC LEED-Green-Associate questions, and they can be easily printed and studied at any time. ActualTorrent regularly updates its PDF file to ensure that its readers have access to the updated questions.

USGBC LEED-Green-Associate Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Energy and Atmosphere: This section of the exam measures the skills of energy efficiency engineers and covers building loads, energy efficiency measures, and alternative energy practices. It emphasizes commissioning, energy auditing, and the use of renewable energy sources.
Topic 2	<ul style="list-style-type: none"> Materials and Resources: This section of the exam measures the skills of sustainable materials specialists and focuses on reuse, life-cycle impacts, waste management, and environmentally preferable purchasing practices. It highlights the importance of material selection in reducing environmental impacts.
Topic 3	<ul style="list-style-type: none"> Indoor Environmental Quality: This section of the exam measures the skills of indoor air quality specialists and covers strategies for improving indoor air quality, lighting, acoustics, and occupant comfort. It emphasizes the use of low-emitting materials and green cleaning practices.
Topic 4	<ul style="list-style-type: none"> Water Efficiency: This section of the exam measures the skills of water conservation specialists and covers strategies for reducing water usage both indoors and outdoors. It includes the use of gray water and rainwater in irrigation and the implementation of low-flow fixtures.
Topic 5	<ul style="list-style-type: none"> Location and Transportation: This section of the exam measures the skills of urban planners and covers site selection criteria and alternative transportation strategies. It emphasizes choosing sites that minimize environmental impact and promote sustainable transportation options.
Topic 6	<ul style="list-style-type: none"> LEED Process: This section of the exam measures the skills of sustainability consultants and covers the foundational aspects of LEED, including organization fundamentals, the structure of LEED rating systems, and the LEED certification process. It emphasizes understanding the goals and objectives of each credit category and how they contribute to sustainable building practices.

USGBC LEED Green Associate Exam Sample Questions (Q196-Q201):

NEW QUESTION # 196

What is the unit of measure for water closets?

- A. Gallons (Liters) per flush**
- B. Usage per full time employee
- C. Gallons (Liters) per person
- D. Average usage per hour

Answer: A

Explanation:

Water closets, also known as toilets, are fixtures that use water to flush human waste into a sewer or septic system. The unit of measure for water closets is gallons (liters) per flush, which indicates the amount of water used for each flushing cycle. The water efficiency of water closets can vary depending on the design, technology, and regulation of the fixture. The LEED rating system encourages the use of water-efficient fixtures that reduce water consumption and wastewater generation¹². NEW QUESTION # 197

When the project team develops the project and building construction budget, which of the following should be incorporated?

- A. Contingency allowances for additional research and analysis of options
- B. Green power purchased from the local power company
- C. Time in the schedule for unique materials and systems**
- D. The future environmental impact of building maintenance operations

Answer: C

Explanation:

When developing the project and building construction budget, the project team should incorporate time in the schedule for unique

materials and systems. This is because some green building strategies may require materials or systems that are not readily available or familiar to the local market. For example, using recycled or salvaged materials may require more time for sourcing and delivery. Similarly, installing renewable energy systems or high-performance HVAC systems may require more time for design and commissioning.

Therefore, the project team should plan ahead and allocate sufficient time for these aspects of the project. References: LEED v4 BD+C Reference Guide, Integrative Process, page 28

NEW QUESTION # 198

Which of the following falls under the Energy and Atmosphere credit category?

- A. Enhanced Refrigerant Management
- B. Interior Lighting
- C. Heat Island Reduction
- D. Cooling Tower Water Use

Answer: C

NEW QUESTION # 199

A building owner is considering developing an undeveloped urban site. What characteristic of the location is most relevant to LEED?

- A. Proximity to renewable energy array
- B. Access to quality transit
- C. Proximity of the site to a landfill
- D. Location of a local U.S. Green Building council (USGBC) office

Answer: B

Explanation:

Explanation

Access to quality transit is one of the criteria for the LEED v4 Location and Transportation category, which aims to reduce the environmental and human health impacts of transportation and promote sustainable site selection. By developing an urban site that is well-served by public transportation, the building owner can reduce the reliance on private vehicles, lower greenhouse gas emissions, and encourage alternative modes of travel¹²³.

NEW QUESTION # 200

The LEED credit weightings, in regard to the most important environmental impacts and human benefits, are based on impact categories defined and established by the

- A. Sheet Metal-and Air Conditioning Contractors National Association (SMACNA)
- B. American Society Of Heating, Refrigeration and Air-conditioning Engineers (ASHRAE)
- C. U.S. Green Building Council (USGBC)
- D. U.S. Federal Government and Department of Energy (DOE)

Answer: C

Explanation:

Explanation

The LEED credit weightings are based on the impact categories defined and established by the USGBC, which is the organization that developed and administers the LEED rating system. The impact categories are aligned with the USGBC's mission and vision of transforming the built environment to enhance environmental and human health. The impact categories are also informed by the Environmental Protection Agency's (EPA) Tools for the Reduction and Assessment of Chemical and Other Environmental Impacts (TRACI) methodology, which provides a framework for assessing environmental impacts across different categories.
